Investment strategy

In actively managing the Compartment, the Manager uses fundamental company analysis to select securities that it believes offer favourable growth prospects at a reasonable price (long position) while selling securities of companies that seem to be overvalued (short position). The Manager may invest in issuers with any environmental, social, and governance (ESG) profile. It methodically exercises voting rights and may engage with issuers in order to positively influence ESG practices. The performance of the Compartment is likely to be significantly different from that of the benchmark, because the Investment Manager has significant discretion to deviate from its securities and weightings.

Investment goal

To increase the value of your investment over the long term, while seeking capital preservation. The Compartment mainly invests in equities worldwide, including in emerging markets and Mainland China. The Compartment can invest across any sector and currency. The Compartment may invest in real estate investment trusts (REITs). Money market instruments and deposits may represent a significant component of the assets, however, much of its actual performance is likely to derive from exposures created through derivatives and structured products.
