Investment strategy

The Fund's strategy is designed to capitalize on inefficiencies in the major markets through a systematic, quantitative investment process that combines active market and stock selection. Active market selection, which is based on stringent valuation criteria, is a key driver of performance and has, in the past, accounted for the majority of value added. The Fund buys into a combination of underpriced markets and holds them till they become slightly overpriced. The country allocation process tends towards equal weighting of the markets selected. Within each market, sector and industry weights are kept close to benchmark levels in order to limit macroeconomic risks. For diversification purposes, a portion of the Fund's assets may be invested in stocks with exceptionally favorable valuation characteristics in other markets.

Investment goal

The Fund Management seeks to outperform the MSCI World Total Return Index with below-benchmark downside risk over holding periods of three to five years by investing in the most attractively valued developed equity markets worldwide.
