Investment strategy

In connection with this strategy, the managers may leverage their investments or make use of derivative instruments. They often use various risk management methods, in particular with regard to their net exposure to market risk. Their management approaches sometimes involve specialization in certain market sectors (healthcare, growth stocks, technology securities, etc.) or in companies of a particular size.

Investment goal

The Sub-Fund invests in Underlying Funds focusing on investing with a long and short format in equities worldwide. These Underlying Funds apply long/short, market-neutral and long or short equity strategies, designed to take advantage of rises and declines of equity prices. In pursuing this strategy, Underlying Funds generally buy securities considered to be undervalued (the "long" segment of the portfolio) and sell short overvalued securities (the "short" segment of the portfolio). In addition to equities, some Underlying Funds may invest in other types of securities which have a risk-return profile similar to equities.
