Investment strategy

Under normal market conditions, the Portfolio typically invests at least 80%, and not less than two thirds, of its assets in equity securities of companies that are organised, or have substantial business activities, in the US. The Investment Manager intends to build a comparatively concentrated, high conviction portfolio of securities of large-capitalisation companies (typically 40-60 companies) that it believes are of high quality and superior long-term growth characteristics. The Portfolio may be exposed to any currency. The Portfolio uses derivatives for hedging (reducing risks) and efficient portfolio management.

Investment goal

The Portfolio seeks to increase the value of your investment over time through capital growth.
