RISK AND REWARD PROFILE

Lower risk

Higher risk

Potentially lower reward

Potentially higher reward

What does this risk indicator mean?

This synthetic risk and reward indicator (SRRRI) scale rating indicates how the Fund may perform and the risk of losing some or all of your capital. Generally the potential for higher gains also means a larger risk of losses. The lowest category does not mean a risk free investment.

The above rating is an estimate, not a guarantee. It is calculated using industry-standard methods and is based on medium-term volatility (how sharply the Fund's actual or estimated share price has gone up and down over five years).

Historical data may not be a reliable indication of the future risk profile of this Fund. The risk and reward category for this Fund is not guaranteed to remain unchanged and may shift over time.

Why is this Fund in this category?

The Fund is not guaranteed in capital. The Fund is invested in debt securities that are subject to variations up or down and that can generate gains or losses.

Risks materially relevant to the Fund but not adequately captured by the SRRRI:

The rating does not reflect the possible effects of unusual market conditions or large unpredictable events, which could amplify everyday risks and could trigger other risks, such as:

Counterparty risk: If an entity with which the Fund does business becomes insolvent, payments owed to the Fund could be delayed, reduced, or eliminated.

Liquidity risk: Certain securities could become hard to buy or to sell at a desired time or price.
