Corporate Governance and ALFI Code of Conduct

The Board is responsible for ensuring that a high level of corporate governance is met and considers that the Fund has complied with the best practices in the Luxembourg funds industry. In particular the Board has adopted principles of the ALFI Code of Conduct (the "Code") which sets out principles of good governance for Luxembourg funds. The Board considers that the Fund has been in compliance with the principles of the Code in all material aspects throughout this financial year.

Yearly Commentary on the Financial Markets

At the start of the reporting period, in quarter four of 2022, the global economy remained under pressure from very high inflation and tighter monetary policies, while some major regions were also hit hard by the negative effects of specific developments (pressures on natural gas supplies in Europe and Covid restrictions in China). Hence, most economic figures published during quarter four were slightly worse than expected.

In quarter one of 2023, the global economy slowed, but with strong regional divergences. In the United States and notably, in the Eurozone, the downturn was more moderate than expected. However, in March, tensions in the markets led to more uncertainty. China remained on an upward trajectory in the wake of its post-Covid reopening, helping to limit the deceleration of other emerging economies. While falling, inflation remained very high in most countries, with central banks continuing to raise key interest rates. Interest rate markets experienced high volatility, while equity markets posted positive performances, thanks in particular to a good January.

In quarter two of 2023, a large proportion of the global economy continued to experience stagflation (low growth and very high inflation). While any decline in inflation barely spread to underlying indices (excluding Energy and Food). Central banks continued to raise their key rates, but at a slower pace than in previous quarters. With regard to financial markets, equities rose while bonds were volatile, albeit to varying degrees, depending on regions and maturities.

In quarter three of 2023, The US economy performed well, while in the Eurozone and China, the economic situation continued to disappoint. Inflation continued to fall in most countries, but remained too high from the central banks' perspective. Central banks in developed economies continued to raise their key rates, but at a slower pace than in previous quarters. By contrast, some central banks in emerging economies started to cut interest rates.

United States

US economic activity was still relatively strong in quarter four of 2022, despite experiencing a downturn. Sectors highly exposed to rising interest rates showed clear signs of erosion, starting with Real Estate. Manufacturing activity also weakened, with the ISM manufacturing index pointing to a contraction, in part due to the US dollar's high value. However, the ISM services index pointed to very strong economic activity. The labour market also remained buoyant, with strong job creation, despite the downward trends. Unemployment rates remained very low, which continued to fuel wage increases. Although inflation was still very high, it did nevertheless fall to 7.1% in November, with core inflation standing at 6.0%. The Fed continued to focus on combating inflation and raised the Fed Funds rate by 75 basis points in November and by 50 basis points in December (taking their target range to 4.25%-4.5%). Lastly, in politics, the midterm elections left the House of Representatives under Republican control, with Democrats retaining control of the Senate.

At the start of 2023 US economic surveys were mixed: the ISM manufacturing index settled in negative territory but, after a brief dip at the turn of the year, the ISM Services index recovered well, then fell close to neutral in March 2023. The US labour market remained very strong: job creation surprised on the upside in January 2023 and, to a lesser extent, in February. The US unemployment rate hit a historic low in January at 3.4%, it then rose to 3.6% in February, mainly due to people re-joining the labour force. US inflation continued to decline, albeit at a very moderate pace: the general index rose by 6.0%, over 12 months in February (6.4% in January), while the underlying index stood at 5.5% (after reaching 5.6%). At the end of the first quarter, recessionary fears proliferated following the bankruptcies of SVB and two smaller banks, which raised concerns about the financial stability and lending conditions of the real economy. Faced with the triple challenge of high inflation, declining growth and rising financial tensions, the Fed continued its monetary tightening, albeit at a slower pace. It raised the Fed Funds rate by 25 basis points in February and then again in March to widen the range to 4.75/5.00%.

Faced with the Fed's rapid rise in interest rates, the US economy slowed in quarter two of 2023, but more gradually than expected at the end of quarter one. In particular, the consequences of the bankruptcy of several regional banks in March remained limited, and fears of a financial crisis eased. Economic indicators weakened (more in industry than in services), but did not signal an imminent recession. Although the unemployment rate rose in May (3.7%, the highest rate seen since October 2022), the labour market nonetheless continued to create more jobs than expected. As for inflation, the general index continued to slow (4.0% over 12 months in May after reaching 5.0% in March and a peak of 9.1% in June 2022), especially under the effect of energy prices, but this trend was less marked on underlying inflation (5.3% in May after reaching 5.6% in March and a peak of 6.6% in September 2022). After raising Fed Funds rates by 25 basis points in May (to 5.0-5.25%), the Fed left them unchanged in June, while signalling a high probability of further increases by the end of the year.

In quarter three, notwithstanding sharply rising interest rates, the US economy proved stronger than expected. Among other factors, the reasons for this resilience included higher levels of household savings and public measures to support investment. September's ISM indicators pointed to strong activity in Services and an easing of contraction in Industry. Albeit slowing, job creation remained at a high level, with the unemployment rate rising slightly (3.8% in August compared to 3.6% in June). The general inflation index accelerated again (3.7% in August compared to 3.0% in June), mainly due to the rise in fuel prices, but the underlying index continued to slow (4.3% in August compared to 4.8% in June). The Fed raised the Fed Funds rates by 25 bps in July (taking the range to 5.25-5.50%), but left them unchanged in September, leaving the door open for further possible rate hikes.

Eurozone

In quarter four of 2022, the Eurozone economy remained under pressure from energy prices as a consequence of the Russia-Ukraine conflict, which was a source of major uncertainty as winter approached. However, despite pointing to a slowdown, economic figures were still slightly better than expected. As a result, Eurozone GDP, and German GDP in particular, continued to rise. Business climate indicators for quarter four (PMI, in particular) signalled a downturn in economic activity, but this downturn was modest in scope. Despite falling slightly in November (to 10.1%, with major differences between Eurozone countries), inflation hit staggering levels and continued to spread from Energy to multiple sectors. The ECB was keen to curb this inflationary trend and, as a result, announced a 75-basis-point hike in its key rates in October, followed by a 50-basis-point hike in December, taking the deposit facility rate to 2.0%. Lastly, after taking piecemeal measures, EU Member State governments made progress in finding joint measures to cap the price of natural gas at the end of the year.

Eurozone economic indicators surprised positively in quarter one of 2023, signalling a stagnation in economic activity rather than a sharp drop. Supporting factors were lower gas prices and the economic recovery in China. The Manufacturing PMI continued to point to a contraction, but its Services counterpart returned to positive territory. The labour market remained strong, with the unemployment rate at an all-time low (6.6%) in February. Inflationary pressures remained very strong: while the general inflation index slowed significantly (up 6.9% over 12 months in March after peaking at 10.6% in October 2022), mainly thanks to negative base effects on energy prices, this was not the case for the underlying index, which continued its acceleration (up 5.7% in February, the highest rate seen since the creation of the euro). Determined to bring inflation down, the ECB raised its key rates by 50 basis points in February, then again in March, to bring the deposit facility interest rate to 3.0% and the refinancing operations interest rate to 3.5%. However, in March, rising financial tensions in the United States, as well as its repercussions in Europe (Credit Suisse bankruptcy and temporary fears about Deutsche Bank) drew attention to new risks.

In quarter two of 2023, Eurozone economic activity remained hampered by the rise in interest rates, the effect of high inflation on household purchasing power as well as an economically sluggish international environment due to the slowdown in the United States and China. After two quarters of a slight decline in GDP in quarter four of 2022 and quarter one of 2023, indicators relating to quarter two were mostly below expectations. Economic surveys pointed to a very significant divergence between Industry (still in difficulty following the shocks of recent years) and Services (where activity remained vigorous, but slowing down). Eurozone inflation continued to fall: over 12 months, the general index was at 5.5% in June after reaching 6.9% in March after a peak of 10.6% in October 2022. However, this decline in inflation only spread very moderately to the underlying index: up 5.4% in June after peaking at 5.7% in March. In addition, wages rose sharply in quarter one. The ECB raised its rates by 25 basis points in May, then again by 25 basis points in June, bringing the deposit facility interest rate to 3.5%. The ECB also suggested a probable additional increase in July.

Economic activity in the Eurozone was disappointing. Quarter two growth figures showed near stagnation (0.1% increase in GDP), after the standstill already observed in quarter one. While countries with high exposure to Services (France and Spain) maintained a slightly positive pace, countries with a more significant position in Industry experienced almost no growth (Germany) or negative growth (Italy). Business activity surveys in quarter three (PMI indices in particular) showed that the decline already observed in Industry was starting to spread to the Services sector. Despite some signs of slowdown, the labour market was strong, with the unemployment rate remaining at 6.4% in August, its lowest level since the creation of the Eurozone. Inflation fell sharply: in September, the 12-month rise in the general index was reduced to 4.3% (compared to 5.5% in June), and that of the underlying index, to 4.5% (compared to 5.5%). The ECB raised its key rates by 25 bps in July, then again in September, raising the deposit facility rate to 4.00%. However, the ECB refrained from presenting further increases as likely, asserting its confidence in the current level of interest rates to further drive inflation down.

Emerging markets

In quarter four of 2022, growth in emerging economies generally held up. Signs of a slowdown were only observed in a small number of countries in Latin America (Chile) and Eastern Europe (Romania). At the same time, the Chinese economy reopened somewhat faster than expected, which improved the global growth outlook and the growth outlook for all emerging countries. Overall, inflation stabilised, despite continuing to rise in a number of countries. A tangible drop in inflation was only observed in Brazil, in the wake of the decline in commodity prices (energy, food and others) and vigorous monetary tightening. Central banks continued their cycles of interest rate rises, but these were not implemented identically across all countries. Central banks in Latin America and Central and Eastern Europe gave the impression that these rate hikes would slow down or even be paused, while in Asia (Indonesia and the Philippines, in particular), rapid tightening was adopted as a proactive stance against inflation.

Quarter one of 2023 was marked by stronger-than-expected activity in China, boosted by a strong upturn in housing sales and favourable budgetary measures. By contrast, the economic situation has been much worse in other emerging economies, although they have proven to be resilient. January's inflation figures showed lower-than-expected declines and even, in some cases, continued acceleration of underlying inflation due to wage indexing mechanisms. However, February's inflation figures then pointed to a more general downturn. In the wake of the sharp downward revision of their expectations regarding the trajectory of key rates in advanced economies, the markets also modified their forecasts for emerging economies. However, in these economies, monetary policy continued to be driven primarily according to the local context, seeking the right balance between interest rate rises and pauses in interest rate hikes, depending on inflation trends and expectations. In China, the Peoples Bank of China (PBoC) unexpectedly reduced the Reserve Requirement Rate (RRR) to stem the sharp rise in interbank rates and to maintain sufficient liquidity in the financial system.

In the second quarter of 2023, the publication of quarter one GDP figures indicated that economic activity had held up better than expected in most emerging countries, due to the slowdown in inflation, the easing of pressures on supply chains thanks to the reopening of China, expansionary budgetary policies in some countries and the greater resilience of European and American economies. High-frequency indicators confirmed a soft landing scenario without, however, suggesting a significant rebound. In China, quarter two growth data signalled a more pronounced than expected slowdown in the Construction and Manufacturing Production sectors. The PBoC reacted by reducing most of its rates by 10 basis points. Some central banks (South Africa, Colombia, Malaysia, Thailand, Philippines and Turkey) once again raised their rates due to inflation but also due to pressures on their currencies thanks to an upward revision of market expectations regarding the US Federal Reserve and the rise in geopolitical tensions. However, in May inflation figures overall surprised on the downside, and the tone of most central banks became more accommodating. Despite high market volatility, the main indices (GBI, EMBI, MSCI) outperformed in quarter two.

Chinese data for quarter three continued to show weakness, particularly in the Real Estate sector, as real estate developers faced new debt difficulties. However, data published in August exceeded expectations, suggesting that the worst had been seen in quarter three. Nevertheless, despite expectations of a gradual cyclical recovery, China is currently experiencing a long-term slowdown. The main factor behind this slowdown was and will continue to be the Real Estate sector. The Chinese government responded with a number of policy measures, but these were not extensive enough to rapidly stimulate growth, with a long-term transition to a less intensive housing and export growth model remaining a priority.

In the majority of emerging countries, macroeconomic momentum remained weak but showed signs of improvement. However, exports seem to have hit their lowest level. Due to weakening base effects, rising food and energy prices and currency pressures, inflation decline slowed down in August and impacted household purchasing power. Yet, apart from a few atypical cases (Turkey, Russia and Thailand, for example), central banks began and continued their monetary easing by lowering their rates. However, many have adopted a more cautious tone following statements of the US Federal Reserve and the possibility of maintaining high rates for longer. Major events in quarter three were the BRICS group opening the door for six new members (Argentina, Egypt, Iran, Ethiopia, Saudi Arabia and the United Arab Emirates), and India's inclusion in the EMGBI index.
