#### 2. Information to Unitholders

#### a. Net asset value

The net asset value of each Sub-Fund Unit will be available each banking day in Luxembourg at the registered offices of the Central Administration, the Management Company and the Depositary Bank.

It will also be published on the website: <a href="http://www.azimutinvestments.com">http://www.azimutinvestments.com</a>

#### b. Notification to Unitholders

Other information intended for unitholders will be published in a Luxembourg newspaper and in the press of the countries where Fund units are marketed.

#### c. Investment Advisors

The Investment Advisors of the Sub-Funds are available in the prospectus.

The Prospectus can be consulted on the website: http://www.azimutinvestments.com

<sup>\*</sup> See Note 1 for further details.

## **Directors' Report**

#### AZ Fund 1 - AZ Allocation - Asset Timing 2024

The AZ Fund 1 - AZ Allocation - Asset Timing 2024 Class AZC EUR returned +9.28% in 2023.

The first quarter of 2023 was initially driven by the positive news of China's reopening, grappling with an exacerbation of the pandemic at the end of the previous year, and the reduction in gas prices, favourable news for the European continent. The wave of positivity was challenged during February by still-supportive inflation data, which rekindled the possibility of further restrictive monetary policies and the consequent upward probability of a global recession. In addition, a spike in volatility in early March was triggered by the bankruptcy of Silicon Valley Bank and the collapse of Credit Suisse, before the intervention of the respective governments and regulators (along with the takeover of the Swiss bank by UBS) brought the situation back to clearer conditions.

In the first part of the year, the Sub-Fund's equity allocation was actively managed with a gradual increase in exposure from around 50% to the 60% area through purchases of investment instruments focused especially on developed markets and characterised by a diversified underlying. As for the fixed income portfolio, allocated in a basket of investment funds and individual securities with high diversification, starting from around 55% the Sub-Fund gradually reduced exposure around 45%, through sales on several instruments, in order to lighten the duration and increase the equity investment level.

In the second quarter, the period's macro data showed an economy that was still resilient and supported by a reporting season with a positive tone. The most notable event of this period, and one that also led to a further market acceleration, was the increased focus on the potential of artificial intelligence, triggered after US company NVIDIA surprised investors with an upward revision of its estimates.

During this period, the Sub-Fund continued to increase its equity exposure towards the upper end of the 65%-70% range while trying to maintain a portfolio allocated in a balanced and diversified manner across geographic, thematic and style investments. The bond portfolio was lightened at a slower pace than in the previous quarter, bringing exposure down to around 40% but still maintaining a highly diversified structure focused on Euro issues

The summer quarter initially saw a continuation of the previous uptrend, thanks in part to a reporting season without any particular negative surprises and some tentative signs that inflation might be coming down, interrupted by a rise in bond yields driven first by expectations for the Jackson Hole Symposium, a conference that remained rather moderate, and then by the September central bank meetings, which essentially reiterated the concept of 'higher rates, longer'.

Summer volatility was actively managed, with exposure remaining at the high end of the 65%-70% range, but with tactical and strategic interventions aimed at trying to make the most of the market pattern. The bond component was lightened again to around 35%, with sales distributed in a way that did not alter the portfolio structure and maintained efficient diversification and quality of underlyings.

The last quarter of the year, after a negative month of October also due to the outbreak of the war between Israel and Palestine, saw a new market acceleration, driven by a reversal in bond yields, a still generally positive quarterly report, signs of slowing inflation and, above all, a December meeting of the Fed interpreted by the market as a turning point towards a more accommodative period.

In the latter part of the year, the equity portfolio was increased towards the high end of the 75%-80% range, with an acceleration of purchases during the second half of the period to better intercept the positive sentiment shown by the market. The bond portfolio was lightened by some of its components, taking advantage of the downturn in bond yields, bringing the invested towards the lower end of the 30%-35% range.

In 2023, the Sub-Fund underperformed the reference index, where one of the biggest detractors from performance can be identified in the underweight of equity, especially in the first part of the year.

In addition, some picks in factor and thematic baskets performed below expectations and the benchmark.

#### AZ Fund 1 - AZ Allocation - Balanced FoF

For the calendar year 2023 the primary unit class (A-AZ Fund) of AZ Fund 1 - AZ Allocation - Balanced FoF had a performance of -3.63%

AZ Allocation - Balanced FoF is a multi-asset fund of fund with a conservative risk profile, managed with a macro/top-down approach. Equity investments comprise between 30% and 60% of net assets.

AZ Allocation - Balanced FoF invests in equity funds, without limitation: global equity funds but also regional funds (Europe, North America, Asia, Emerging Markets) and in single-country funds. Regarding fixed income investments, Asset Plus invests in fixed income funds without limitation in terms of rating, region, currency, and issuers. A non-exhaustive list of fixed income strategies is the following: money market funds, sovereign bond funds, aggregate bond funds, corporate bonds, convertible bonds, emerging market bonds, total return funds.

AZ Allocation - Balanced FoF began the year with a strong change in the asset allocation: after the massive drawdown in 2022 either in the equity and in the bond markets a tactical long position took place at the beginning of the new year increasing the net equity exposure jointly with a rise in the portfolio duration. To be precise, the Sub-Fund manager was expecting a strong rebound for a few weeks from those equity sectors that were the worst performing sector in 2022. Therefore, the long equity exposure from zero rose to 56% mainly closing the existing short positions on NASDAQ futures and partially different other equity futures. The long equity exposure remained like the one at the end of 2022 with the main change regarding the incremental position on the banking sector through third party funds, futures and swaps. On the bond side the short duration position was reduced from minus 5 years to around minus 3 years, closing the short position on futures on BTP, Bund, and US Treasuries.

#### AZ Fund 1 - AZ Allocation - Balanced FoF (continued)

Around the end of January and the beginning of February the net equity exposure was reduced again increasing the short position on various equity futures and ten years bond futures reaching respectively the minimum available net equity exposure on equity and a range between minus 3 and minus 5 years in duration. The Sub-Fund manager was keen to keep a conservative stance either in the equity and bond exposure reducing again the financial and technological sectors whilst he increased the exposure on traditionally lower volatility strategies and sectors; he also drastically reduced the exposure on corporate high yield and emerging debt. The main reason was justified by stubborn inflation that remained well above the 2% Fed's target rate followed by a level of interest rates that could derail the economic growth leading into recession. The blow up of Credit Suisse and Silicon Valley bank induced the Sub-Fund manager to maintain a conservative asset allocation until the end of the first quarter assuming the probability of a recession drastically increased due to a crisis in the financial systems that could dry up liquidity from the economic system.

During the second quarter the main changes in the asset allocation were focused on increasing the duration to slightly negative based on the possibility central banks were getting close to the pivot probably by the beginning of the summer. On the equity side, the main changes were focused on the increase of the emerging market exposure (mainly China and Brazil) jointly with the increase of the European banking sector whose earnings were steeply on the rise. On the other hand, the short exposure on the NASDAQ was increased due to the consideration that earnings were still compressed, and a multiple expansion was unjustifiable having the highest level of risk free in the last two decades. At the end of the second quarter the equity exposure was at around 33% and the duration was around -0.7 years.

During the third quarter there were different macroeconomic data that could be interpreted as a slowdown in the economy was coming either in the US with a strong discrepancy between GDP and GDI, but also with an even clearer slowdown in Europe and China. The Sub-Fund manager preferred to keep a conservative stance for the entire quarter just rotating third party funds, selling those that were underperforming in the first part of the year and increasing the best performing ones. The end of the negative base effect on inflation caused by the oil price made the financial community think that we could have an unexpected further rise in inflation in the second half of the year. From August onwards we experienced a steep rise in the long end of the curve reaching almost 5% in the 30 years treasury yield. Throughout the quarter the Sub-Fund manager slowly increased the portfolio duration but with bias on the safer part of the bond spectrum, going long duration on US Treasuries and German Bund and opening short positions on French OAT and Italian BTP and Japanese Government Bonds. At the end of the quarter the equity exposure was at the minimum available exposure whilst the duration was at around 2 years. Dollar exposure was at around 50% up to the end of September.

The last quarter of the year was characterized, in October, by an increase in volatility due to the geopolitical tension in the Middle East but then, after the FOMC statements, at the beginning of November the equity and bond markets experienced a strong rally. At the end of the year the Fed reassured the markets that we are probably at the pivot and from next year we can experience multiple rate cuts. From November till the end of December the markets discounted 7 rate cuts with a drop in the 10-year treasury yield of around 120 basis points from the peak of October. The manager firstly increased the exposure on the equity part for around 10% partly closing existing short positions on NASDAQ futures that were reopened at the end of November; then, in December, again some short on NASDAQ futures were closed again moving the net equity exposure to around 41% at the end of the year. Duration initially increased, closing short positions on BTP, and then tactically reduced at the end of November selling treasuries and Bund. In December the duration increased again, raising the exposure on 2,5,10, and 20 years Treasuries and keeping short positions on bund and Japanese 10 years bond. The dollar exposure was drastically reduced from 64% in October to 12% at the end of December whilst the emerging currency exposure rose to around 30%.

#### AZ Fund 1 - AZ Allocation - CGM Balanced Brave

In 2023, the Sub-Fund produced a positive return of +7.97% for the retail class and +9.93% for the institutional one; during the same period the performance of the MSCI World EUR H Index was +20.96%, and those of Bloomberg Corporate Bond Index 1-3Y and of Bloomberg Government Bond Index 1-3Y were respectively +5.11% and +3.55%.

The year started with considerable worries over the state of the world economy. Inflation worries were a bit scaled down in the early part of the January, but some positive revisions of 2022's data reversed this stance. For this reason, Powell suggested in February that the Fed might be able to further hike its key interest rates references, triggering a domino effect in the markets, with some weaker local regional banks being de facto unable to operate without external support. In a matter of days, fears over the stability of the US financial system became the only topic of discussion of monetary policy makers. The Fed promptly created special facilities to support the banks in need, consequently expanding the CB asset base. The market interpretation of this action was straightforward, overweight "megacaps" and underweight everything else.

Some uncertainty over the economy stayed until the earning season of the second quarter, but Nvidia reporting extremely well compared to market estimates triggered a massive short-squeeze for the equity markets, with an uptrend that lasted until the end of July. The Sub-Fund took advantage of the uptrend with a long position on the tech indexes.

The correction in August, and later during the fall, was triggered by a resurgence of interest rates, which reached new highs for the year; but favourable macroeconomic data, followed at the start of November by a dovish stance from the Fed and a liquidity boost from the treasury markets through the QRA, supported all asset classes until the end of the year.

The Sub-Fund was able to take advantage of this last bounce thanks to an equal weight position on equities and an overweight duration on government bonds.

Most notably, the good performance was achieved with an average equity exposure equal to approximately 30%.

#### AZ Fund 1 - AZ Allocation - Conservative FoF

For the calendar year 2023 the primary unit class (A-AZ Fund) of AZ Fund 1 - AZ Allocation - Conservative FoF had a performance of -3.63%.

AZ Allocation - Conservative FoF is a multi-asset fund of fund with a conservative risk profile, managed with a macro/top-down approach. Equity investments comprise between zero and 30% of net assets.

AZ Allocation - Conservative FoF invests in equity funds, without limitation: global equity funds but also regional funds (Europe, North America, Asia, Emerging Markets) and in single-country funds. Regarding fixed income investments, Asset Plus invests in fixed income funds without limitation in terms of rating, region, currency, and issuers. A non-exhaustive list of fixed income strategies is the following: money market funds, sovereign bond funds, aggregate bond funds, corporate bonds, convertible bonds, emerging market bonds, total return funds.

AZ Allocation - Conservative FoF began the year with a strong change in the asset allocation: after the massive drawdown in 2022 either in the equity and in the bond markets a tactical long position took place at the beginning of the new year increasing the net equity exposure jointly with a rise in the portfolio duration. To be precise, the Sub-Fund manager was expecting a strong rebound for a few weeks from those equity sectors that were the worst performing sector in 2022. Therefore, the long equity exposure from zero rose to 25% mainly closing the existing short positions on futures NASDAQ and partially on different other future indexes. The long equity exposure remained like the one at the end of 2022 with the main change regarding the incremental position on the banking sector through third party funds, futures and swaps. On the bond side the short duration position was reduced from minus 4 years to around minus 1 year, closing the short position on futures on BTP, Bund, and US Treasuries.

Around the end of January and the beginning of February the net equity exposure was reduced again increasing the short position on various equity futures and ten years bond futures reaching respectively zero net equity exposure on equity and a range between minus 2 and minus 3 years in duration. The Sub-Fund manager was keen to keep a conservative stance either in the equity and bond exposure reducing again the financial and technological sectors whilst he increased the exposure on traditionally lower in volatility strategies; he also drastically reduced the exposure on corporate high yield and emerging debt. The main reason was justified by stubborn inflation that remained well above the 2% Fed's target rate followed by a level of interest rates that could derail the economic growth leading into recession. The blow up of Credit Suisse and Silicon Valley bank induced the Sub-Fund manager to maintain a conservative asset allocation until the end of the first quarter assuming the probability of a recession drastically increased due to a crisis in the financial systems that could dry up liquidity from the economic system.

During the second quarter the main changes in the asset allocation were focused on increasing the duration to slightly negative based on the possibility central banks were getting close to the pivot probably by the beginning of the summer. On the equity side, the main changes were focused on the increase of the emerging market exposure (mainly China and Brazil) jointly with the increase of the European banking sector whose earnings were steeply on the rise. On the other hand, the short exposure on the NASDAQ was increased due to the consideration that earnings were still compressed, and a multiple expansion was unjustifiable together with the highest level of risk free in the last two decades. At the end of the second quarter the equity exposure was at around 0% and the duration was around -0.5 years.

During the third quarter there were different macroeconomic data that could be interpreted as a slowdown in the economy was coming either in the US with a strong discrepancy between GDP and GDI, but also with an even clearer slowdown in Europe and China. The Sub-Fund manager preferred to keep a conservative stance for the entire quarter just rotating third party funds, selling those that were underperforming in the first part of the year and increasing the best performing ones. The end of the negative base effect on inflation caused by the oil price made the financial community think that we could have an unexpected further rise in inflation in the second half of the year. From August onwards we experienced a steep rise in the long end of the curve reaching almost 5% in the 30 years treasury yield. Throughout the quarter the Sub-Fund manager slowly increased the portfolio duration but with a bias on the safer part of the bond spectrum, going long duration on US Treasuries and German Bund and opening short positions on French OAT, Italian BTP, and Japanese Government Bonds. At the end of the quarter the equity exposure was at the minimum available exposure around 0% whilst duration was at around 2 years. Dollar exposure was at around 23% up to the end of September.

The last quarter of the year was characterized, in October, by an increase in volatility due to the geopolitical tension in the Middle East but then, after the FOMC statements at the beginning of November the equity and bond markets experienced a strong rally. The Fed at the end of the year reassured the markets that we are probably at the pivot and from next year we can experience multiple rate cuts. From November till the end of December the markets discounted 7 rate cuts with a drop in the 10YR treasury yield of around 120 basis points from the peak of October. The manager firstly increases the exposure on the equity part for around 10% partly closing existing short positions on NASDAQ futures that were reopened at the end of November; then, in December again some short on NASDAQ futures were closed again moving the net equity exposure to around 8% at the end of the year. Duration initially increased, closing short positions on BTP, and then tactically reduced at the end of November selling treasuries and Bund. In December the duration increased again, raising the exposure on 2,5,10, and 20 years Treasuries and keeping short positions on bund and Japanese 10 years bond. The dollar exposure was drastically reduced from 32% in October to around 0% at the end of December whilst the emerging currency exposure rose to around 12%.

#### AZ Fund 1 - AZ Allocation - Dynamic FoF

During 2023, the main fund unit class (A-AZ Fund) produced a performance of -5.8%.

The Sub-Fund invests in third party funds that cover various asset classes; the Sub-Fund preferably focuses mainly on equity strategy. The Sub-Fund dynamically moves the equity net exposure as an important element of alpha generation depending on different phases of the market. The Sub-Fund tends to maintain a long exposure on third party funds with relatively low turnover whereas the net exposure dynamically changes increasing and/or decreasing the equity exposure through futures on equity indexes.

#### AZ Fund 1 - AZ Allocation - Dynamic FoF (continued)

At the beginning of the year, the Sub-Fund had a quite remarkable increase of its net exposure, rising to 63%. The long part of the portfolio did not have many changes. The long end of the portfolio kept a predominant exposure on minimum volatility, dividend, and value strategies for the entire year. One of the main changes in January was the reduction of 5% in minimum volatility strategies replaced by an increase in European equity ETFs and global value funds. The net exposure raised mainly closing 20% of short position on futures NASDAQ 100, 12% in Stoxx50 and 10% in S&P500. Around the end of January and the beginning of February the net equity exposure was reduced again, increasing the short position on various equity futures. The Sub-Fund manager was keen to keep a conservative stance either in the equity exposure reducing again the financial and technological sectors whilst he increased the exposure on traditionally lower volatility strategies and sectors. The main reason was justified by stubborn inflation that remained well above the 2% Fed's target rate followed by a level of interest rates that could derail the economic growth leading into recession in the months ahead. The blow up of Credit Suisse and Silicon Valley bank induced the Sub-Fund manager to maintain a conservative asset allocation until the end of the first quarter assuming the probability of a recession drastically increased due to a crisis in the financial systems that could dry up liquidity from the economic system. The exposure on emerging markets was raised in January for few percentage points; however, even though valuations were extremely attractive, the rise in geopolitical tensions between China and USA was the main reason why it was maintained underweight. At the end of March net equity exposure was around 27% and dollar exposure around 53%.

During the second quarter the net exposure was reduced for a further 5%. In April the exposure on quality growth funds increased by around 5% whilst the exposure on Value and Dividend funds was reduced for the same amount. Unfortunately, the second quarter was characterized by the rise of the technology sector that was underweight in the portfolio. The long/short exposure generated negative alpha since the long positions did not go up or had a correction whilst the short positions on futures S&P500 and MSCI World had a partial exposure on the tech sectors that was the only one to produce remarkable positive performance. Due to the negative alpha generation, the Sub-Fund manager reduced the gross exposure increasing the investments on short term treasuries and short-term Italian BOT to rising the portfolio's yield. The inversion of the US yield curve that was predictable of recession 8 times in the last 50 years, and the expectation of earnings above average with no slowdown in the economy, did not make the manager comfortable for the second part of year and he kept the conservative stance up to the end of June.

During the third quarter in July the net equity exposure initially rose around 7% closing part of the short positions on US futures and partially rotating them into the MSCI World futures. The yield curve experienced a strong rise in the long end of the curve from August onwards. At the beginning it was justified with the strength of the US economy supported by a strong job market. On the other hand, it seemed there was selling pressure on the bond markets due to the oversupply generated by a strong fiscal deficit in the USA. Moreover, the end of the negative base effect on inflation caused by the oil price made the financial community think that we could have an unexpected further rise in inflation in the second half of the year. The slowdown in China jointly with the disruption of Evergrande and the technical recession in Germany pushed the Sub-Fund manager to keep a negative stance in the entire portfolio gradually reducing the net exposure up to 16% at the end of September increasing short positions on futures MSCI World, STOXX50, S&P500, NASDAQ100. In the last two months of the quarter the global equity markets experienced high volatility and there was an increase of around 7% of the minimum volatility strategy.

The last quarter of the year was characterized, in October, by an increase in volatility due to the geopolitical tension in the Middle East but then, after the FOMC statements, at the beginning of November the global equity markets experienced a strong rally. At the end of the year the Fed reassured the markets that we are probably at the pivot and from next year we can experience multiple rate cuts. From November till the end of December the markets discounted 7 rate cuts with a drop in the 10-year treasury yield of around 120 basis points from the peak of October. The manager at the beginning of November firstly increased the net equity exposure for around 21% reaching 37% overall, partly closing existing short positions on NASDAQ futures and S&P500. Short position on MSCI World futures were reopened for 7% at the end of November. In December the exposure on emerging markets rose around 6% whilst minimum volatility, dividend, infrastructure, and healthcare strategies were reduced for the same amount. Global, European and US Value strategies were increased by around 7%. With the dovish wording from the Fed the Dollar exposure moved from 60% at the end of October to 33% at the end of November, and 21% at the end of December. At the end of the year the portfolio breakdown shows 68% of long positions and 30% short positions on equity index futures. Around 25% is still invested in short term treasuries and short-term Italian BOT.

#### AZ Fund 1 - AZ Allocation - Escalator 2026

The AZ Fund 1 - AZ Allocation - Escalator 2026 Class AZC EUR returned +7.70% in 2023.

The first quarter of 2023 was initially driven by the positive news of China's reopening, grappling with an exacerbation of the pandemic at the end of the previous year, and the reduction in gas prices, favourable news for the European continent. The wave of positivity was challenged during February by still-supportive inflation data, which rekindled the possibility of further restrictive monetary policies and the consequent upward probability of a global recession. In addition, a spike in volatility in early March was triggered by the bankruptcy of Silicon Valley Bank and the collapse of Credit Suisse, before the intervention of the respective governments and regulators (along with the takeover of the Swiss bank by UBS) brought the situation back to clearer conditions.

During this period, the Sub-Fund maintained an equity allocation in the region of around 30%, with a gradual increase during the period due in part to purchases in funds with a global focus and a diversified underlying. At the same time, the bond exposure was decreased from around 75%-80% to around 65%-70%, relieving the Sub-Fund also of some of the purchases made in the second half of 2022 on corporate bonds and investment funds.

In the second quarter, the period's macro data showed an economy that was still resilient and supported by a reporting season with a positive tone. The most notable event of this period, and one that also led to a further market acceleration, was the increased focus on the potential of artificial intelligence, triggered after US company NVIDIA surprised investors with an upward revision of its estimates.

#### AZ Fund 1 - AZ Allocation - Escalator 2026 (continued)

In this quarter, the Sub-Fund's equity exposure grew at a faster pace than in the first part of the year to above about 35%, mainly through purchases of diversified underlying equity investment instruments with a focus on developed countries, maintaining also in portfolio an efficient balance in the allocation between geographic, thematic and style investments. The fixed income component remained substantially stable during this period, remaining close to the levels of the previous quarter.

The summer quarter initially saw a continuation of the previous uptrend, thanks in part to a reporting season without any particular negative surprises and some tentative signs that inflation might be coming down, interrupted by a rise in bond yields driven first by expectations for the Jackson Hole Symposium, a conference that remained rather moderate, and then by the September central bank meetings, which essentially reiterated the concept of 'higher rates, longer'.

The summer quarter was approached by actively managing the allocation and seeking to protect the portfolio during the volatile market phase through tactical and strategic buying, with exposure falling below 35% during the first half of August and then returning to the mid 35%-40% range by the end of the month. The fixed income portfolio allocation did not change substantially, remaining invested at levels close to those of the previous quarter.

The last quarter of the year, after a negative month of October also due to the outbreak of the war between Israel and Palestine, saw a new market acceleration, driven by a reversal in bond yields, a still generally positive quarterly report, signs of slowing inflation and, above all, a December meeting of the Fed interpreted by the market as a turning point towards a more accommodative period.

In the final part of the year, the Sub-Fund further increased its exposure around 40%, benefiting from the positive momentum of the period, again mainly through purchases in instruments with diversified underlyings, taking into account the opportunities offered by the market window. The fixed-income component was lightened almost equally towards the lower end of the 60%-65% range, with an acceleration in the latter period in order to benefit from falling yields in the bond world.

In 2023, the Sub-Fund underperformed the reference index, where one of the biggest detractors from performance can be identified in the underweight of equity, especially in the first part of the year.

In addition, some picks in factor and thematic baskets performed below expectations and the benchmark.

#### AZ Fund 1 - AZ Allocation - European Dynamic

AZ Fund 1 - AZ Allocation - European Dynamic returned 4.8% in 2023.

During the first quarter of the year, the main stock markets moved into positive territory. Major indices seemed more inclined to celebrate good macroeconomic data rather than worry about central banks' more hawkish monetary policies. Positive macroeconomic news were accompanied by data showing a trend of gradual inflation reduction. As a result, markets opted for more cyclical sectors such as Technology, Semiconductor and Automotive, at the expense of defensive sectors like Food and Healthcare. Despite a strong increase in interest margins in Europe the Financial sector has been penalized by the Silicon Valley Bank's failure and Credit Suisse's rescue. On the technology front, it is noteworthy that after initial concerns about cloud capex growth, US Big Tech stocks went up. During the quarter, the Sub-Fund 's equity exposure increased to around 39% of NAV. The Sub-Fund adopted a pro-cyclical approach by reducing the weight of Staples and Food in favour of the Industrial sector, the Technology sector and Semiconductor manufacturers. The Sub-Fund tried to capture the favourable moment of reopening-related securities by focusing on European airline companies and on the Hospitality sector. Within the cyclical stocks, the approach to Mining and Oil remained cautious, partly due to a delayed recovery in China.

The second quarter of the year continued along the lines of the first, marked by a struggle between positive economic data and restrictive policies from central banks. In particular, during the second quarter, we witnessed a gradual acceleration in the US macroeconomic landscape, accompanied by positive news on the inflation front. This Goldilocks scenario pushed US indices higher, while in Europe, a less vibrant macroeconomic picture, characterized by greater weakness in the manufacturing sector, partially limited the appreciation of stock prices. After some concerns related to the growth of the cloud in the technology sector appeared in the first guarter, the situation improved, first with more reassuring messages from the US giant Microsoft, and later with positive adoption data for Al/ChatGPT and the resulting demand for semiconductors. The widespread adoption of ChatGPT has indeed influenced the market, causing significant sales in sectors potentially disrupted by the new frontiers of AI, such as the agency, specialized publishing, and sometimes the music industry. However, it has also highlighted the strong need for investments in hyperscalers to support the growing demand for Al processes. In the quarter, we saw a strong appreciation of stocks related to GPU semiconductors, processors, and memory, as well as general software and IT stocks. In the latter part of the quarter, especially in the US, there was an acceleration of the more cyclical and laggard parts of the market, such as Transportation and Materials. Sectors with a more defensive nature, such as Food and Beverage and Telecom, suffered from this renewed interest in the cyclical component of the market, particularly in Europe, where the mining sector, probably more correlated to the Chinese recovery, has been impacted. During the quarter, the Sub-Fund maintained its equity exposure close to 38% of the NAV. The Sub-Fund then responded to the strong momentum in technology by cutting some stocks negatively impacted by AI, such as agencies, and increasing exposure to semiconductors. We also added some Industrial stocks related to the development of data centers. We have also included in the portfolio some industrial stocks linked to the development of data centers, especially with regards to electrical infrastructure. During the guarter we increased the duration of the portfolio by purchasing European and US government bonds with a duration of around 7-10 years.

#### AZ Fund 1 - AZ Allocation - European Dynamic (continued)

The third quarter has been characterized by a rather erratic trend. After a positive July, concerns resurfaced related to a 'higher for longer' government interest rate scenario. Starting from the Jackson Hole Symposium, we saw a general increase in government rates and, in particular, a significant tightening of the spread between US 10-year and 2-year rates. The market responded with widespread profit-taking across almost all sectors. In the US, sectors most sensitive to interest rates, such as Technology, Real Estate, and Utilities. The quarter has also marked by concerns about consumer resilience. The most cyclical Travel & Leisure sector has heavily penalized, along with historically defensive sectors like Food & Beverage. Specifically, the Packaged Food sector showed strongly negative performance on fears of price reduction to halt the decline in volumes experienced by distribution for many quarters. In the Food & Beverage sector, in addition to a sharp decline in Spirits (notoriously more cyclical), we witnessed significant sales in the beer sector, which usually, being part of higher-frequency and lower-cost purchases, has more defensive characteristics. The consumer outlook worsened further as positive results from some anti-obesity drugs highlighted the risk of a potential future reduction in the consumption of certain product categories (unhealthy foods and alcoholic beverages). The introduction of these drugs also weighed on other defensive sectors such as Medical and Biomedical Technologies, potentially disadvantaged by a reduction in the number of obese individuals, and the HMO sector, which in the long term should benefit from a reduction in surgeries but may face higher short-term costs associated with the introduction of anti-obesity drugs. Among the few positive sectors of the quarter, we note the Energy sector, boosted by the increase in oil prices, and the financial sector, thanks to higher interest rates and, in the United States, the substantial stability of deposits. Throughout the quarter, we rapidly reduced equity exposure to below 35% of the NAV, cutting sectors tied to rising rates and consumer spending, reducing the weight of airport concessions, utilities, and Food and Beverage. Instead, we slightly increased exposure to the financial sector and, anticipating a possible stabilization of monetary policy, to the Real Estate Investment Trusts in the residential sector.

In the fourth quarter, we witnessed the continuation of the inflation reduction dynamics. Despite the robust performance of the US economy, the European economy appeared weaker, inflation continued its path toward central banks' targets. Accompanied by more dovish tones from central bankers, financial market participants gradually joined the idea of an imminent interest rate cut in the US and Europe. The rapid improvement in financial conditions gradually pushed equity markets higher. Initially, the technology sector reacted positively, thanks to strong data from Microsoft and Amazon in the Hyperscale and Artificial Intelligence fronts, revitalizing the Technology and Semiconductor sectors. The strong outperformance of large-cap US stocks relative to the rest of the US market and the European market gradually gave way to other investment themes and a strong performance of the Russell 2000 index. In particular, we witnessed strong performances in some 'rate-sensitive' sectors heavily penalized in previous quarters. In Europe, the Real Estate Investment Trusts sector produced excellent performance, as did the Asset Managers sector. Additionally, in recent months we have seen improvements in rental dynamics in some European countries, partly due to indexation processes, and some operators have demonstrated the ability to reduce debt positions through asset sales. In the US, in addition to the Technology and Semiconductor sectors, the Regional Banks sector performed well. After concerns about deposit outflows and increased funding costs, these banks seem poised to benefit from an interest rate normalization and substantial economic activity. The Energy sector and the Pharmaceutical sector remained weak during the quarter due to concerns about drug price pressure and difficulties in the pipeline development of some companies. During the quarter, the fund rapidly increased equity exposure to over 40% of the NAV to capitalize on year-end gains, bringing exposure back to around 39%. The main purchases focused on the Semiconductor equipment sector, the Real Estate Investment Trusts and Utilities sectors. In the last weeks of December, we reduced the portfolio's duration, primarily adjusting the short end of the European curve."

In 2023, the Sub-Fund had a performance of 4.8% vs a 11.4% performance of the reference index. The Sub-Fund underperformed compared to the reference index due to the relatively lower equity and credit exposure, in particular in the High Yield segment. Part of the underperformance is also due to portfolio duration exposed to the US market.

#### AZ Fund 1 - AZ Allocation - Global Aggressive

AZ Fund 1 - AZ Allocation - Global Aggressive returned 9.5% in 2023.

During the first quarter of the year, the main stock markets moved into positive territory. Major indices seemed more inclined to celebrate good macroeconomic data rather than worry about central banks' more hawkish monetary policies. Positive macroeconomic news were accompanied by data showing a trend of gradual inflation reduction. As a result, markets opted for more cyclical sectors such as Technology, Semiconductor, and Automotive, at the expense of defensive sectors like Food and Healthcare. Despite a strong increase in interest margins in Europe the Financial sector has been penalized by the Silicon Valley Bank's failure and Credit Suisse's rescue. On the technology front, it is noteworthy that after initial concerns about cloud capex growth, US Big Tech stocks went up. During the quarter, the Sub-Fund 's equity exposure slightly increased to around 70% of the NAV. The Sub-Fund adopted a pro-cyclical approach by reducing the weight of Staples and Food in favour of the Industrial sector, the Technology sector, particularly GPU and Semiconductor manufacturers linked to Artificial Intelligence, and the Cybersecurity sector, which, in our opinion, involves less discretionary investment. The Sub-Fund tried to capture the favourable moment of reopening-related securities by focusing on European airline companies and the US Med-tech sector, benefiting from the elimination of personnel constraints in hospitals that had affected the overall post-COVID recovery. Within the cyclical stocks, the approach to Mining and Oil remained cautious, partly due to a delayed recovery in China. During the month, the Sub-Fund increased its exposure to the Japanese market by acquiring cyclical stocks with reasonable valuations and good financial position, driven by the reallocation of Asian flows outside the Chinese market and pressures for corporate governance improvement.

The second quarter of the year continued along the lines of the first, marked by a struggle between positive economic data and restrictive policies from central banks. In particular, during the second quarter, we witnessed a gradual acceleration in the US macroeconomic landscape, accompanied by positive news on the inflation front. This Goldilocks scenario pushed US indices higher, while in Europe, a less vibrant macroeconomic picture, characterized by greater weakness in the manufacturing sector, partially limited the appreciation of stock prices. After some concerns related to the growth of the cloud in the technology sector appeared in the first quarter, the situation improved, first with more reassuring messages from the US giant Microsoft, and later with positive adoption data for Al/ChatGPT and the resulting demand for semiconductors.

#### AZ Fund 1 - AZ Allocation - Global Aggressive (continued)

The widespread adoption of ChatGPT has indeed influenced the market, causing significant sales in sectors potentially disrupted by the new frontiers of AI, such as the agency, specialized publishing, and sometimes the music industry. However, it has also highlighted the strong need for investments in hyperscalers to support the growing demand for AI processes. In the quarter, we saw a strong appreciation of stocks related to GPU semiconductors, processors, and memory, as well as general software and IT stocks. In the latter part of the quarter, especially in the US, there was an acceleration of the more cyclical and laggard parts of the market, such as Transportation and Materials. Sectors with a more defensive nature, such as Food and Beverage and Telecom, suffered from this renewed interest in the cyclical component of the market, particularly in Europe, where the mining sector, probably more correlated to the Chinese recovery, was impacted. During the quarter, the Sub-Fund maintained its equity exposure close to 70% of the NAV. The Sub-Fund then responded to the strong momentum in technology by cutting some stocks negatively impacted by AI, such as agencies, and increasing exposure to semiconductors. We also added some Industrial stocks related to the development of data centers and some healthcare stocks, attempting to anticipate a possible relationship between AI and the healthcare sector. In June, we further increased exposure to more cyclical sectors with higher beta, such as Oil Equipment. The rebalancing was carried out by taking profits in the Food & Beverage sectors and US HMOs.

The third quarter was characterized by a rather erratic trend. After a positive July, concerns resurfaced related to a 'higher for longer' government interest rate scenario. Starting from the Jackson Hole Symposium, we saw a general increase in government rates and, in particular, a significant tightening of the spread between US 10-year and 2-year rates. The market responded with widespread profit-taking across almost all sectors. In the US, sectors most sensitive to interest rates, such as Technology, Real Estate, and Utilities. The quarter was also marked by concerns about consumer resilience. The most cyclical Travel & Leisure sector was heavily penalized, along with historically defensive sectors like Food & Beverage. Specifically, the Packaged Food sector showed strongly negative performance on fears of price reduction to halt the decline in volumes experienced by distribution for many quarters. In the Food & Beverage sector, in addition to a sharp decline in Spirits (notoriously more cyclical), we witnessed significant sales in the beer sector, which usually, being part of higher-frequency and lower-cost purchases, has more defensive characteristics. The consumer outlook worsened further as positive results from some anti-obesity drugs highlighted the risk of a potential future reduction in the consumption of certain product categories (unhealthy foods and alcoholic beverages). The introduction of these drugs also weighed on other defensive sectors such as Medical and Biomedical Technologies, potentially disadvantaged by a reduction in the number of obese individuals, and the HMO sector, which in the long term should benefit from a reduction in surgeries but may face higher short-term costs associated with the introduction of anti-obesity drugs. Among the few positive sectors of the quarter, we note the Energy sector, boosted by the increase in oil prices, and the financial sector, thanks to higher interest rates and, in the United States, the substantial stability of deposits. Throughout the quarter, we rapidly reduced equity exposure to below 65% of the NAV, cutting sectors tied to rising rates and consumer spending, reducing the weight of airport concessions, utilities, and Food and Beverage. Instead, we slightly increased exposure to the financial sector and, anticipating a possible stabilization of monetary policy, to the Real Estate Investment Trusts in the residential sector.

In the fourth quarter, we witnessed the continuation of the inflation reduction dynamics. Despite the robust performance of the US economy, the European economy appeared weaker, inflation continued its path toward central banks' targets. Accompanied by more dovish tones from central bankers, financial market participants gradually joined the idea of an imminent interest rate cut in the US and Europe. The rapid improvement in financial conditions gradually pushed equity markets higher. Initially, the technology sector reacted positively, thanks to strong data from Microsoft and Amazon in the Hyperscale and Artificial Intelligence fronts, revitalizing the Technology and Semiconductor sectors. The strong outperformance of large-cap US stocks relative to the rest of the US market and the European market gradually gave way to other investment themes and a strong performance of the Russell 2000 index. In particular, we witnessed strong performances in some 'rate-sensitive' sectors heavily penalized in previous guarters. In Europe, the Real Estate Investment Trusts sector produced excellent performance, as did the Asset Managers sector. Additionally, in recent months we have seen improvements in rental dynamics in some European countries, partly due to indexation processes, and some operators have demonstrated the ability to reduce debt positions through asset sales. In the US, in addition to the Technology and Semiconductor sectors, the Regional Banks sector performed well. After concerns about deposit outflows and increased funding costs, these banks seem poised to benefit from an interest rate normalization and substantial economic activity. The Energy sector and the Pharmaceutical sector remained weak during the quarter due to concerns about drug price pressure and difficulties in the pipeline development of some companies. During the guarter, the Sub-Fund rapidly increased equity exposure to over 70% of the NAV to capitalize on year-end gains, bringing exposure back to around 68%. The main purchases focused on the Semiconductor sector, the financial sector with a focus on US regional banks, and the Real Estate Investment Trusts and Utilities sectors in Europe. In the last weeks of December, we reduced the portfolio's duration, primarily adjusting the short end of the European curve.

In 2023, the Sub-Fund had a performance of 9.5% vs a 16.6% performance of the reference index. The Sub-Fund underperformed compared to the reference index due to the relatively lower equity and credit exposure.

#### AZ Fund 1 - AZ Allocation - Global Balanced

In 2023 the Sub-Fund performance was of +2.65%. The equity average net exposure was close to 58%, while the average bond exposure was close to 45%. In terms of equity breakdown, the most weighted areas were the United States (40%), followed by Japan (8%), Europe (7%) and Asia (3%). The investment approach has always followed preferences for stocks having stable high-quality business models and strong pricing power. During the year options protections have been put in place, with 5 to 7 percentage of notional, using mainly S&P500 option positions. On the bond side, the asset allocation was built to achieve an aggregate global exposure to IG corporate bonds and developed market government bonds. The average credit outstanding was A, the duration has been increased during the year until 2.7 years.

#### AZ Fund 1 - AZ Allocation - Global Conservative

The AZ Fund 1 - AZ Allocation - Global Conservative Class AZC EUR returned +6.96% in 2023.

The first quarter of 2023 was initially driven by the positive news of China's reopening, grappling with an exacerbation of the pandemic at the end of the previous year, and the reduction in gas prices, favourable news for the European continent. The wave of positivity was challenged during February by still-supportive inflation data, which rekindled the possibility of further restrictive monetary policies and the consequent upward probability of a global recession. In addition, a spike in volatility in early March was triggered by the bankruptcy of Silicon Valley Bank and the collapse of Credit Suisse, before the intervention of the respective governments and regulators (along with the takeover of the Swiss bank by UBS) brought the situation back to clearer conditions.

During this period, the Sub-Fund was actively managed, accompanying the initial rise in the market with an increase in equity, also through futures, in the upper 20%-25% range, and then closing the period again at around 20% through transactions aimed at lightening the portfolio's overall risk. The bond component saw a gradual increase in investments, from below 70% to trending towards 75%, with an increase in the government component and a slight increase in duration in the 3.5-year area.

In the second quarter, the period's macro data showed an economy that was still resilient and supported by a reporting season with a positive tone. The most notable event of this period, and one that also led to a further market acceleration, was the increased focus on the potential of artificial intelligence, triggered after US company NVIDIA surprised investors with an upward revision of its estimates.

The Sub-Fund did not substantially alter its asset allocation during this period. The equity component saw some tactical upward and downward moves during the quarter but in the range of 18%-22%. As for the bond portfolio, the upward trend in the government component continued at the expense of the corporate component, though maintaining an aggregate investment close to the previous quarter's percentage, but with the duration decreasing slightly to around three years.

The summer quarter initially saw a continuation of the previous uptrend, thanks in part to a reporting season without any particular negative surprises and some tentative signs that inflation might be coming down, interrupted by a rise in bond yields driven first by expectations for the Jackson Hole Symposium, a conference that remained rather moderate, and then by the September central bank meetings, which essentially reiterated the concept of 'higher rates, longer'.

In these months, the Sub-Fund has reduced its equity exposure to around the 16%-20% range attempting to relieve the portfolio of risk during the period of increasing market volatility. As for the bond component, the corporate instruments were gradually sold off in line with previous months in favour of government bonds purchases. The duration at the end of the period was essentially stable compared to the previous quarter and the allocation was in the range 75%-80%.

The last quarter of the year, after a negative month of October also due to the outbreak of the war between Israel and Palestine, saw a new market acceleration, driven by a reversal in bond yields, a still generally positive quarterly report, signs of slowing inflation and, above all, a December meeting of the Fed interpreted by the market as a turning point towards a more accommodative period.

In the final months of the year, the Sub-Fund's equity allocation was kept in the upper end of the 18%-20% range, sometimes increased even further using futures in order to optimise exposure according to market dynamics. In the bond portfolio, government bonds were increased further in the first part of the quarter, but were reduced towards the end of the year, only partially compensated by some corporate purchases. At the end of the year, the bond portfolio was around 75%, with duration increasing slightly but still in the 3-year area.

In 2023, the Sub-Fund performed in line with the reference index, using throughout the year a portfolio focused on quality companies with an efficient degree of diversification across names, sectors, styles and geography. Likewise, also the bond portfolio, especially at the corporate level, was characterised by high diversification across instruments, issuers, and sectors.

#### AZ Fund 1 - AZ Allocation - Global Income

AZ Fund 1 - AZ Allocation - Global Income class AZC EUR returned +2.17% in 2023, below the reference index performance of 5.6%.

The average net equity exposure has been 55% and the average bond exposure at 25%.

The main drivers of the underperformance have been:

- geographical allocation, due to the relative overweight of Europe and underweight of US and Japan,
- sector allocation due to the relative overweight of Healthcare and Utilities, not fully compensated by the overweight in Financials and Information Technology.

The Sub-Fund started the year with a net equity exposure of 60% and a bond exposure of 20% because of the relative attractiveness of the equity yields vs bond yields.

During the second half when interest rates raised to a peak of 5% in US, net equity exposure has been brought down to 50% and bond exposure has been increased to 33%, bringing the average duration of the bond portfolio to 2 years, above the benchmark duration of 1.7.

Through the second half of the year, we increased exposure to Information Technology and Industrials given the favourable trend in demand for both sectors and decreased exposure in Consumer Discretionary and Utilities given the relative negative momentum on top line.

Moreover, during the second half of the year the underweight of Japan and US have been reduced, financed by the decrease of long position in Switzerland and UK.

#### AZ Fund 1 - AZ Allocation - International 50%-100%

2023 was a volatile year for financial markets, that continued to be mainly driven by inflation dynamics and Central Banks' monetary policy measures.

After a positive start to the year, driven by easing inflationary pressures and an overall improvement in the economic outlook, the collapse of Californian lender SVB delivered the first setback, temporarily shifting the markets' focus from inflation to financial stability and causing a contagion effect to other financial institutions across the Atlantic. The situation was contained by the prompt intervention of the Fed, that managed to preserve the depositors by instituting the Bank Term Funding Program (BTFP), a facility designed to provide additional funding to financial institutions. Moreover, several consolidation initiatives were promoted, both in Europe and in the US, with the notable case of the takeover of Credit Suisse by UBS, that led to the complete write-down of the Swiss lender's AT1 bonds.

Notwithstanding the tensions in the financial sector, the equity indices, and the US Tech sector in particular, reported positive performances, driven by the emergence of the Generative AI theme and the implications for productivity and revenues.

The manager added exposure to the US Tech sector during the period, increasing the overall equity exposure of the Sub-Fund.

Despite the financial stability concerns, Fed and ECB stayed the course and continued delivering further hikes until July and September, respectively. Overall, their tone remained cautious, but the tilt swinged between hawkish and dovish across the spring/summer months - tracing inflation and labor market data - and caused some volatility in the mid months of the year.

Central Bankers' tone took a decisive hawkish tilt in the autumn, when the narrative shifted from additional hikes to the length of the tightening period. This higher-for-longer rhetoric, combined with persistently higher sovereign deficit levels - particularly in the US -, brought about debt sustainability concerns and triggered a large bear steepening move on yield curves, leading to significant losses across maturities and the long end in particular.

The main portfolio exposures were dynamically managed in the period, in accordance with the opportunities offered by the market. The manager maintained, on average, an equity overexposure compared to the benchmark.

This trend saw a sharp reversal from the beginning of November, when financial markets experienced the largest 2-months rally in the post-COVID period. The rally was propelled in November by the US Treasury Quarterly Refunding Announcement, which delivered a recalibration of the issuance profile less skewed toward longer maturities, combined with an explicit communication of a flexible approach aimed at containing excessive volatility in the Treasury market. Dovish comments from several Central Bank officials - Waller and Powell in primis - threw fuel to the fire, as well as lower than expected inflation readings on both sides of the Atlantic.

The Sub-Fund recorded a positive performance during the year, benefiting from upsides on both the equity and bond components.

Continuing to dynamically manage the portfolio's key exposures, in the latter part of the year the manager increased the equity exposure of the Sub-Fund to the maximum level allowed.

The Sub-Fund closed the year with a NAV of EUR 6.786 and a yearly performance of 11.32%.

#### AZ Fund 1 - AZ Allocation - Italian Long Term Opportunities

The AZ Fund 1 - AZ Allocation - Italian Long-Term Opportunities AZC EUR returned 10.3% in 2023.

The first quarter was marked by an initial positive performance in the financial sector, but it was interrupted by the crisis of regional American banks and Credit Suisse. The Italian market had an excellent performance in the quarter. Investment in the Sub-Fund remained in the range of 95-100%. During the quarter, positions in the consumer discretionary sector were reduced, while those in industrials and materials were increased. The small-cap component and stocks listed on Euronext Growth Milan (EGM) reached the threshold of 45% during the quarter. Eurogroup Lamination's IPO was participated in during the quarter.

In the second quarter, the market continued to perform positively, led by automotive and banking sector stocks. The mid and small-cap component began to suffer outflows from PIR funds. The investment level reached the range of 98-100%. Weights on the IT sector were increased, particularly to leverage the momentum on the AI theme. Several IPOs were participated in during the quarter, including Ferretti, IDB, and Ecomembrane. Lottomatica's IPO was not participated in due to ESG issues.

In the third quarter, the Italian market remained substantially flat in the large-cap component, while the mid and small caps continued to underperform heavily due to ongoing outflows from dedicated funds and a lack of new investors approaching the segment. This was also influenced by the continuous interest rate hikes by central banks. Throughout the quarter, earnings estimates for financials were constantly revised upwards by analysts, while the industrial component suffered from a constant cut in estimates linked to destocking effects in various markets. The quarter was also characterized by a collapse in liquidity across the Small-cap sector. Some financial stocks with negative performance and interesting Dividend Yields were marginally increased during the quarter. Sector-wise, the Sub-Fund maintained exposure to consumer discretionary and industrials, which were penalized by the destocking process. The investment level was also above 100%.

The fourth quarter of the year began with the continuation of the trends seen throughout the year, with the overperformance of interest rate-related stocks and some automotive stocks, while the industrial, utilities, and mid-cap segments continued to underperform. From November, given inflation data, sectoral trends rapidly reversed. The mid-cap component reversed the underperformance trend compared to large caps during the fourth quarter. Exposure to the information technology sector was maintained, industrials were retained, and the weight of the mid-cap segment was increased given the valuations reached. The Sub-Fund underperformed the reference index due to underweighting certain stocks related to arms production and banks.

#### AZ Fund 1 - AZ Allocation - Italian Trend

The AZ Fund 1 - AZ Allocation - Italian Trend AZC EUR returned +11.9% in 2023.

The first quarter was characterized by an initial positive performance in the financial sector, but it was interrupted by the crisis of regional American banks and Credit Suisse. The Italian market had an excellent performance in the quarter.

The Sub-Fund maintained an equity exposure of around 100%. During the first quarter, the sectoral exposure to financials was reduced from an initial overweight to a weight in line with the benchmark. The weight of utilities was increased, pharmaceuticals and mid-cap components were maintained overweight, while the consumer discretionary component remained underweight.

In the second quarter, the market continued to perform positively, led by automotive and banking sector stocks. The mid and small-cap components began to suffer outflows from PIR funds. In the Sub-Fund, a cautious view was maintained on the consumer discretionary sector during the second quarter, keeping the automotive component underweight. Overweight positions were maintained in the more defensive sectors of the market, preferring regulated utilities and healthcare. Positions in the IT sector were increased during the semester.

In the third quarter, the Italian market remained essentially flat on the large-cap component, while the mid and small-cap components continued to underperform heavily due to continuous outflows from dedicated funds and the lack of new investors approaching the segment. This was also influenced by the central banks' continuous interest rate hikes. Throughout the quarter, earnings estimate for financials were constantly revised upward by analysts, while the industrial component suffered from a constant cut in estimates linked to destocking effects in various markets.

In the Sub-Fund, a cautious view was maintained on the economic cycle, with overweight positions on defensive sectors such as regulated utilities and pharmaceuticals, while the weight of financials remained in line with the benchmark. A positive view on the telecommunications sector was continued. The mid and small-cap component was gradually reduced during the quarter due to its constant underperformance. Underweight positions on consumer discretionary and energy sector stocks were also reduced.

The fourth quarter of the year began with the continuation of the trends from the entire year, with overperformance of interest rate-related stocks and some automotive stocks, while the industrial, utilities, and mid-cap components continued to underperform. From November, given inflation data, sectoral trends rapidly reversed. The mid-cap component reversed its underperformance trend compared to large caps. The Sub-Fund maintained a full-invested position. The defensive component remained overweight for the quarter. The process of reducing the mid and small-cap component continued in the early part of the quarter. At the end of the quarter, the financial component was reduced. The Sub-Fund underperformed the benchmark due to exposure to the small and mid-cap components, overweight in defensive sectors such as regulated utilities and healthcare and underweighting the automotive component for much of the year.

#### AZ Fund 1 - AZ Allocation - Long Term Credit Opportunities

In 2023, the AZ Fund 1 - AZ Allocation - Long Term Credit Opportunities Sub-Fund recorded a positive performance of +5.44% (class A ACC). The fall of government interest rates and the tightening of credit spreads benefitted the Sub-Fund. The exposure to Chinese real estate names had a negative impact on the fund while the exposure to some high beta names such as Argentina and Pakistan had a large positive impact. The portfolio was made up mainly of high yield Emerging Market bonds given its long-term investment horizon and its objective of providing a high yield to maturity. The exposure to currencies other than the Euro was always under 20% and it was diversified across EM and DM currencies. From a geographical standpoint the Sub-Fund was exposed 65% to emerging markets (out of which 35% frontier markets) and 40% to developed markets. Going into 2024 the Sub-Fund will continue to allocate a larger share of the portfolio to emerging markets and an exposure to Government yields higher compared to the last couple of years.

#### AZ Fund 1 - AZ Allocation - Long Term Equity Opportunities

During the calendar year 2023, the main class of the Sub-Fund produced a return of +12.16% (unit class A, accumulation, EUR).

In 2023, markets reversed the previous year's performance, thanks to a combination of slowing inflation, which paved the way for more dovish central bank policies, and a robust US economy and labour market. After hitting 5% intraday in October, US 10y yields rebounded, ending the year at 3,88% on the back of outcomes from the December Fed meeting, which pointed to a 75bps drop in official rates in 2024. This combined with a solid economic environment, supporting the soft-landing narrative, and fueling a rebound in the final months of the year. Swings in risk appetite and market performance during the year were driven by several factors. On one hand, tensions in the banking sector, discussions on the US debt ceiling and government shutdown, and geopolitical turmoil, particularly in Ukraine and the Middle East, contributed to volatility and uncertainty. On the other hand, strength in technology's earnings and prospects led to positive performances among mega-caps and artificial intelligence stocks, driving the major indexes higher. China faced challenges in 2023, suffering from a lackluster growth environment, along with conditions in the Chinese real estate market, negatively impacting sentiment and investment flows. Commodities were generally weak in 2023, with crude oil prices peaking in September before falling at year end.

The Sub-Fund strategy on the equity side remains to be focused on a small number of companies (40-45 range throughout the year), with an underappreciated and strong earnings power, with an anchor investor that keeps the focus on long term strategy that we believe will create strong value for shareholders. This investment strategy naturally focuses more on Europe and less in the US where in general top management is more remunerated on shorter term targets. On the bond side, exposure can be diversified among markets and instruments, and is currently focused on Government bonds due to the return of interesting yields also in that space. At the same time, during the year we built some positions into contingent convertibles (CoCos) instruments issued by European banks, thanks to the interesting yield potential and to the exposure to the underlying asset.

Our net equity exposure closed the year in the 85-88% range, after being reduced to as low as 75% in the second quarter on the back of a conservative view on macroeconomic development. In terms of geographical exposure, the sub-fund kept its tilt toward Europe, with an average 76% weight including the UK, vs just above 21% for the US. Portfolio's turnover has been quite low in accordance with the strategy.

### AZ Fund 1 - AZ Allocation - Long Term Equity Opportunities (continued)

Our current main positions are Berkshire Hathaway (financials), Astrazeneca (healthcare), Equinor (energy), Eurazeo (private equity) and Cellnex (communication services).

#### AZ Fund 1 - AZ Allocation - PIR Italian Excellence 30%

AZ Fund 1 - AZ Allocation - PIR Italian Excellence 30% returned 7.3% in 2023.

The first quarter was characterized by an initial positive performance in the financial sector, but it was interrupted by the crisis of regional American banks and Credit Suisse. The Italian market had an excellent performance in the quarter. The Sub-Fund maintained an equity exposure of around 100%. The Sub-Fund reduced its equity investment level to 25% from an initial level of approximately 28%, compared to a maximum of 30%. Overweight positions were maintained in Consumer Discretionary, industrials, and small caps within the equity component. The bond component remained stable with a duration of approximately 2.5 years and a yield of around 4%.

In the second quarter, the market continued to perform positively, led by automotive and banking sector stocks. The mid and small-cap component began to suffer outflows from PIR funds. During the quarter, the equity component was increased to around 36%. Purchases were made in the Information Technology segment, both among large caps and small and mid-caps. Exposure to the telecommunications sector was maintained. Several IPOs were participated in during the quarter, including Ferretti, IDB, and Ecomembrane. Lottomatica's IPO was not participated in due to ESG issues. The bond component remained essentially unchanged during the quarter.

In the third quarter, the Italian market remained substantially flat in the large-cap component, while the mid and small caps continued to underperform heavily due to ongoing outflows from dedicated funds and a lack of new investors approaching the segment. This was also influenced by the continuous interest rate hikes by central banks. Throughout the quarter, earnings estimate for financials were constantly revised upwards by analysts, while the industrial component suffered from a constant cut in estimates linked to destocking effects in various markets. During the third quarter, the equity component was reduced through sales in consumer discretionary and among small caps, and underweight positions were maintained in financials. Overweight positions were maintained in industrials, which continued to underperform due to the heavy destocking cycle. In the corporate bond portfolio, several positions reached maturity and were replaced with government securities.

The fourth quarter of the year began with the continuation of the trends seen throughout the year, with the overperformance of interest rate-related stocks and some automotive stocks, while the industrial, utilities, and mid-cap segments continued to underperform. From November, given inflation data, sectoral trends rapidly reversed. The mid-cap component reversed the underperformance trend compared to large caps during the fourth quarter. During the fourth quarter, the equity component was further increased from 60% to around 27-29%, compared to a maximum of 30%. Sectorwise, a preference continued for industrial and information technology stocks, while the financial component remained underweight. The bond component remained unchanged from the previous quarter, with expectations of several issuances in the first quarter of 2024.

The Sub-Fund underperformed the reference index primarily due to exposure to small caps and sectoral allocation, concentrated in the industrial and consumer sectors, and underweight on financials.

## AZ Fund 1 - AZ Allocation - PIR Italian Excellence 70%

The AZ Fund 1 - AZ Allocation - PIR Italian Excellence 70% AZC EUR returned +10,8% in 2023.

The first quarter was characterized by an initial positive performance in the financial sector, which was, however, interrupted by the crisis of regional American banks and Credit Suisse. The Italian market had an excellent performance in the quarter. The Sub-Fund reduced its equity investment level to 60% from an initial level of approximately 66%, compared to a maximum of 70%. Overweight positions were maintained in Consumer Discretionary, industrials, and small caps within the equity component. The bond component remained stable with a duration of approximately 2.5 years and a yield of around 4%.

In the second quarter, the market continued to perform positively, led by automotive and banking sector stocks. The mid and small-cap component began to suffer outflows from PIR funds. During the quarter, the equity component was increased to around 65%. Purchases were made in the Information Technology segment, both among large caps and small and mid-caps. Exposure to the telecommunications sector was maintained. Several IPOs were participated in during the quarter, including Ferretti, IDB, and Ecomembrane. Lottomatica's IPO was not participated in due to ESG issues. The bond component remained essentially unchanged during the quarter.

In the third quarter, the Italian market remained substantially flat in the large-cap component, while the mid and small caps continued to underperform heavily due to ongoing outflows from dedicated funds and a lack of new investors approaching the segment. This was also influenced by the continuous interest rate hikes by central banks. Throughout the quarter, earnings estimates for financials were constantly revised upwards by analysts, while the industrial component suffered from a constant cut in estimates linked to destocking effects in various markets. During the third quarter, the equity component was reduced through sales in consumer discretionary, and underweight positions were maintained in financials. Overweight positions were maintained in industrials, which continued to underperform due to the heavy destocking cycle. In the corporate bond portfolio, several positions reached maturity, but given the time of the year, it was not possible to replace them immediately.

The fourth quarter of the year began with the continuation of the trends seen throughout the year, with the overperformance of interest rate-related stocks and some automotive stocks, while the industrial, utilities, and mid-cap segments continued to underperform. From November, given inflation data, sectoral trends rapidly reversed. The mid-cap component reversed the underperformance trend compared to large caps during the fourth quarter. During the fourth quarter, the equity component was further increased from 60% to around 65-67%, compared to a maximum of 70%. Sectorwise, a preference continued for industrial and information technology stocks, while the financial component remained underweight. The bond component remained unchanged from the previous quarter, with expectations of several issuances in the first quarter of 2024.

#### AZ Fund 1 - AZ Allocation - PIR Italian Excellence 70% (continued)

The Sub-Fund underperformed the reference index primarily due to exposure to small caps and sectoral allocation, concentrated in the industrial and consumer sectors, and underweight on financials.

## AZ Fund 1 - AZ Allocation - Risk Parity Factors

The Sub-Fund performance in 2023 was 4.94% - EUR unit class. The Sub-Fund equity exposure has been maintained, during the year, in a range between 38% and 50%, following the risk factors allocation model. The main factor contribution in term of portfolio weight has been the minimum volatility, during the first month of the year, but it was reduced starting from the mid of the year in favor of growth and small cap factors. The overall equity exposure was in a lower band of the range during most of year, because the levels of risks on each factor were well above the average, absorbing most of the risk equity budget. The good performance reached came from factors rotation, from low risk and value factors to growth-oriented factors. The duration component has been dynamically managed, it was increased progressively from 6 month to 2.7 years, due to the rates environment reached after the central banks rate's hikes, activity started in the 2022 to fight the inflation spike up generated just after the liquidity injection due to the COVID pandemic.

### AZ Fund 1 - AZ Allocation - Strategic Balanced Catholic Values

The AZ Fund 1 - AZ Allocation - Strategic Balanced Catholic Values EDI EUR returned +9.57% in 2023, including the reinvestment of dividends.

The first quarter of 2023 was initially driven by the positive news of China's reopening, grappling with an exacerbation of the pandemic at the end of the previous year, and the reduction in gas prices, favourable news for the European continent. The wave of positivity was challenged during February by still-supportive inflation data, which rekindled the possibility of further restrictive monetary policies and the consequent upward probability of a global recession. In addition, a spike in volatility in early March was triggered by the bankruptcy of Silicon Valley Bank and the collapse of Credit Suisse, before the intervention of the respective governments and regulators (along with the takeover of the Swiss bank by UBS) brought the situation back to clearer conditions.

During this period, the Sub-Fund was actively managed with an equity allocation that increased from around 25% to around 30% at the end of the period, with an initial increase followed by a slight decrease in the middle part of March. The equity portfolio was augmented with the purchase of individual stocks in multiple markets, included in a basket highly diversified across issuers, sectors and geographic areas. The bond component, diversified and allocated mainly in government bonds belonging to Germany, France, Italy and Spain as well as a smaller component of corporate bonds, was managed around 70%, but with a duration increasing to around 4.5 years, compared to 4 years at the start. Moreover, in the final phase of the period, there was a reduction in the corporate component in favour of the government component.

In the second quarter, the period's macro data showed an economy that was still resilient and supported by a reporting season with a positive tone. The most notable event of this period, and one that also led to a further market acceleration, was the increased focus on the potential of artificial intelligence, triggered after US company NVIDIA surprised investors with an upward revision of its estimates.

During this quarter, the Sub-Fund had an actively managed equity exposure but never too far from around 30%, falling or rising depending on tactical interventions due to market patterns, always maintaining a high degree of diversification of the underlying. The bond portfolio was not substantially rebalanced, and the slight turnover was due to adjustments imposed by market dynamics, with close to 50% invested in government bonds and less than 20% in corporate bonds.

The summer quarter initially saw a continuation of the previous uptrend, thanks in part to a reporting season without any particular negative surprises and some tentative signs that inflation might be coming down, interrupted by a rise in bond yields driven first by expectations for the Jackson Hole Symposium, a conference that remained rather moderate, and then by the September central bank meetings, which essentially reiterated the concept of 'higher rates, longer'.

The Sub-Fund coped with the summer volatility by reducing its equity exposure, which arrived at the end of the period in the lower end of the 25%-30% range, lightening the investment in equity instruments but without affecting the high diversification characterising the portfolio. The bond portfolio also underwent greater turnover, with a gradual sale of the corporate component, now in the 10%-15% range, in favour of the government component, at around 60%, with duration increasing slightly above 4.5 years.

The last quarter of the year, after a negative month of October also due to the outbreak of the war between Israel and Palestine, saw a new market acceleration, driven by a reversal in bond yields, a still generally positive quarterly report, signs of slowing inflation and, above all, a December meeting of the Fed interpreted by the market as a turning point towards a more accommodative period.

In contrast, the final part of the year saw the Sub-Fund's equity exposure gradually increase towards the top 25%-30%, boosted by the introduction of new companies and adjustments made to the allocated portfolio in order to benefit from the rising market trend. Of lesser importance was the rebalancing of the fixed income portfolio, which saw a residual decrease in the increase that did not alter substantially the portfolio structure of the previous quarter, except for the rebalancing carried out tactically over time between the different tenors in order to make their exposure more efficient.

In 2023, the Sub-Fund underperformed the reference index, especially during the last two quarters, mainly due to the equity portfolio selection and the underweight in corporate bonds.

### AZ Fund 1 - AZ Allocation - Strategic Escalator

The AZ Fund 1 - AZ Allocation - Strategic Escalator Class AZC EUR returned +8.76% in 2023.

The first quarter of 2023 was initially driven by the positive news of China's reopening, grappling with an exacerbation of the pandemic at the end of the previous year, and the reduction in gas prices, favourable news for the European continent. The wave of positivity was challenged during February by still-supportive inflation data, which rekindled the possibility of further restrictive monetary policies and the consequent upward probability of a global recession. In addition, a spike in volatility in early March was triggered by the bankruptcy of Silicon Valley Bank and the collapse of Credit Suisse, before the intervention of the respective governments and regulators (along with the takeover of the Swiss bank by UBS) brought the situation back to clearer conditions.

During the first phase of the year, the Sub-Fund was actively managed by gradually increasing its equity exposure from the low end of the 40%-45% range to the high end. Purchases were made through instruments focused on the developed country universe and with diversified underlyings. The bond portfolio, which remained substantially stable over the period at around 60%, is allocated in a basket of investment funds with flexible asset allocation and dynamic duration management and strategies with limited credit risk and duration.

In the second quarter, the period's macro data showed an economy that was still resilient and supported by a reporting season with a positive tone. The most notable event of this period, and one that also led to a further market acceleration, was the increased focus on the potential of artificial intelligence, triggered after US company NVIDIA surprised investors with an upward revision of its estimates.

During this period, the Sub-Fund continued to gradually increase its exposure to the equity market, reaching the 45%-50% range thanks in part to purchases focused on different styles and geographies. The fixed income portfolio, on the other hand, was lightened towards the mid of the range 50%-53% through a number of sales involving both the basket of investment funds with dynamic asset allocation and active duration management and investment funds with limited credit risk and duration, all with the aim of reducing the Sub-Fund's sensitivity to the asset class and, at the same time, allowing the equity component to increase.

The summer quarter initially saw a continuation of the previous uptrend, thanks in part to a reporting season without any particular negative surprises and some tentative signs that inflation might be coming down, interrupted by a rise in bond yields driven first by expectations for the Jackson Hole Symposium, a conference that remained rather moderate, and then by the September central bank meetings, which essentially reiterated the concept of 'higher rates, longer'.

During the summer period, the Sub-Fund actively managed its asset allocation, first by increasing its investment in equity and then returning to the same levels as at the end of June in order to counteract the market volatility that characterised the middle part of the quarter. Tactical and strategic investments were always made with investment instruments focused on developed countries and with a diversified underlying. On the other hand, the fixed-income component saw a new reduction in investments, to the lower end of the 40%-45% range, also through the easing of flexible strategies focused on specific markets.

The last quarter of the year, after a negative month of October also due to the outbreak of the war between Israel and Palestine, saw a new market acceleration, driven by a reversal in bond yields, a still generally positive quarterly report, signs of slowing inflation and, above all, a December meeting of the Fed interpreted by the market as a turning point towards a more accommodative period.

In the latter part of the year, the Sub-Fund maintained its equity exposure mainly in the 45% to 50% range, ending the year towards the lower end of the range. The active management of the exposure saw an initial rise in investment, which was then reduced in the final stages of the quarter. The bond component of the portfolio closed the period up around 50%, thanks in part to a portfolio turnover that saw an increase in the number of instruments and, consequently, performance drivers.

In 2023, the Sub-Fund underperformed the reference benchmark, mainly due fund picking because some active strategies in equity and fixed income have been below expectations, despite the fact that no particular criticalities have been found.

## AZ Fund 1 - AZ Allocation - Target 2023 Equity Options\*

2023, a year with a thousand faces but which finally began to return satisfaction, after the nightmare of 2022 with unprecedented losses for the bond world. The elements that punctuated the year were 1) the failure of some American banks and the incorporation of Credit Suisse into UBS in March, 2) the surprising strength of growth dynamics and of the labor market in the United States in the middle phase, with the widespread feeling of having to deal with higher rates for longer, 3) stronger signs of disinflation during the last quarter, from core inflation in the United States to various measures of inflation in Europe and the rest of the world, which led to 4) the Fed's sort-of-pivot at the end of the year, fueling the sharp decline in yields and an incredible recovery in bonds with spectacular performances in November - the best month in history - and December.

Bond yields for the year, however, remained almost unchanged in the United States, while they fell in Europe, with inflation declining but still substantial. Credit spreads have also fallen, with emphasis in the speculative world, despite a generalized increase in the default rate globally. The decline in volatility and the performance of equities (MSCI World in US dollars +24.4%, SPX +26.2%, Eurostoxx50 +23.2%) have certainly contributed to this constructive environment for High Yield. Credit returns were generally positive: IG US +8.4%, HY US +13.4%, IG EU +8.0%, HY EU +12%, Emerging +10.3%, global aggregate bonds +4.2%. Italian government bonds also performed well, +12.0% on maturities over 5 years, with spreads on the German curve shrinking (from 215 to 165 basis points).

A particularly complicated economic and financial environment remains, with many variables that will continue to impact the scenario, including geopolitics; For the time being, however, a significant return of volatility seems to be excluded. The downward path of inflation seems to be able to extend to 2024, while growth, albeit weakening, should remain positive. Central banks have room to adjust monetary policy while continuing to reabsorb liquidity, albeit in an environment where new issuance by governments could be higher than seen in recent years.

<sup>\*</sup> See Note 1 for further details.

## AZ Fund 1 - AZ Allocation - Target 2023 Equity Options\* (continued)

In 2023, the Sub-Fund recorded a very positive performance, +5.8% (class A ACC), thanks to the generalized strength of the credit world, especially at the level of subordinated financials and emerging markets, including on short-term securities. Duration continued to decline gradually, until the merger by absorption into AZ Fund 1 - AZ Bond - Target 2026 at the end of November. The portfolio remained structured with percentages above 10% in corporate hybrids, subordinated financials, senior Investment Grade, emerging and government securities, with residual percentages in convertibles and High Yield. Activity during the year focused 1) on the management of outflows, 2) in the middle of the year on the rebalancing of the portfolio from a more defensive perspective, reducing the credit components in favor of very short-term government bonds, and 3) in the weeks leading up to the merger, on the adjustment of the portfolio to the new time profile.

### AZ Fund 1 - AZ Allocation - Trend

In 2023, the main class of the Sub-Fund achieved a net performance of +16.72%, vs. +17.13% of the benchmark (80% World 100% Hedged to EUR (ticker: MXWOHEUR Index) + 20% Bloomberg Euro Treasury Bills 0-3 Months Index (I18260EU Index)).

The performance in 2023 of the equities and bonds markets marked a clear departure from 2022, with the majority of the asset classes performing better than they did in 2022 and above consensus expectations. This double-digit performance was obtained despite the highest interest rates in decades, one of the biggest bank crises in the US in March, high geopolitical risk, fueled by the tensions in the Middle East in October, and the ongoing conflict in Ukraine.

The recession fear, which was weighted in 2022, was replaced by growing confidence that US policymakers would have achieved a soft landing of the economy.

This was possible due to the resilience of the labor market, which kept consumption at a high level even with the high borrowing costs, and a slowdown in inflation.

During the year the portfolio remained well diversified, with a range of 150 - 170 companies, with an equity net exposure on average of 96%, using derivates assets to manage the equity exposure actively. The Expected Tracking Error of the Sub-fund was high, around 6.40%, confirming an unconstrained approach in the stock selection. Positioning, at a geographical level, was in line with the benchmark except for the underweight in Europe, while at a sector level there was a general overweight for non-cyclical stocks (especially in Healthcare, and Utilities) and a general underweight for cyclical stocks (except for Comm Service and Industrial).

In terms of performance attribution, the main contributors were the underweight in Cons Staple, the overweight in Info-tech, and the underweight in Utilities, while the main detractors were the underweight in Energy and Financial, and the overweight in Materials. At a single stock level, the main contributors were Arista Network, AMD, and Goldman Sachs, while the main detractors were Oceaneering, RTX, and Komatsu.

At the end of the year, the main positions in the Sub-fund in terms of absolute weight were Cisco (Info-Tech), JPMorgan (Financials), Salesforce (Info-Tech), TE Connectivity (Info-Tech), and Microsoft (Info-Tech).

## AZ Fund 1 - AZ Allocation - Turkey

Turkish stocks struggled last year until mid-year due to presidential elections, massive earthquake, and intensive inflows to IPOs. After re-election of Erdogan and market-friendly new economic team appointments, markets have seen hawkish messages from new CBRT governor and rapid rate hikes by the central bank. Consequently, there has been increasing foreign investor trust to the macro outlook. There is upcoming municipal election in March 2024 and once the elections are over, there will be four years without another vote scheduled.

The XU100 index surged 35.6% in TRY terms but returned negative 14.1% in USD terms last year. The year began with trailing and forward P/Es of the BIST at 4.8x and 5.5x, but by mid-year, they had dropped to 4.6x and 4.9x, and by the end of the year, they were at 4.9x and 3.8x, respectively. Beside this, the end-2022 MSCI Türkiye discount to its emerging peers was 57%; however, it increased to 61% by the end-2023.

The banking sector showed outperformance throughout the year with the effect of positive macroeconomic developments (73.38% in TRY terms, 9.75% in USD terms). The 5-year CDS for Türkiye dropped from its peak level of 700bp in May 2023 to 300bp levels in the rest of the year. The system has a sufficient level of capital adequacy ratio at 18.29% and a manageable NPL portfolio of 1.51% as of November 2023. The average return on equity (ROE) has become 35.7% as of October 2023.

Turkish currency fell approximately 59% against USD in 2023. Also, we have seen 64% CPI and 44.2% PPI in 2023. Services inflation has risen from 89.7% y/y in November to 90.66% y/y in December (Rents increased by 108.58% y/y). The expectation is to end 2024 at a 36% CPI level.

The rolling 12-month current account deficit shrank from \$50.9 billion in October to USD 49.6 billion in November. It was USD 49.1 billion at 2022 year-end. It should be underlined that energy and gold imports are the main factors for the widening current account deficit. Excluding gold and energy, the "core" current account surplus decreased from USD 50.4 billion at year-end 2022 to USD 32 billion in December 2023. The government's target regarding the current account deficit over GDP is to reduce it down to 3.1% in 2024.

<sup>\*</sup> See Note 1 for further details.

#### AZ Fund 1 - AZ Allocation - Turkey (continued)

Central government budget revenues of Türkiye increased by 86.1% in 2023 compared to 2022, reaching around TRY 5 trillion, and its expenses increased by 123.8% to TRY 6 trillion. Consequently, the central government budget had a deficit of approximately TRY 1.4 trillion in 2023 whereas it was around TRY 143 billion deficit in 2022. Expenses for the earthquake zone, Southeast of Turkey, had a significantly negative effect on the budget balance. The total cost of the natural catastrophe to the Turkish economy is estimated to be around TRY 3 trillion. While the government spent TRY 950 billion in 2023 for the region's rehabilitation, they pledged to fund extra TRY 1.3 trillion in 2024 and a total of TRY 3 trillion by the end of 2026. The weight of earthquake expenditures on national income is 3.7%, but excluding these temporary expenditures, the budget deficit to national income is 1.7%, which is also below the Maastricht criterion.

5,9% y/y growth was seen in the Turkish economy in Q3-2023, going up from 3,9% in the first half of the year while it slowed down to 0.3% q/q. In the third quarter, the service sector growth was 5.2% and the industrial and agricultural sectors grew 5.7% and 0.3% respectively. Fixed capital investments, private and public consumption expenditures went up by 14.7%, 11.2% and 5.3% respectively. On the other hand, the net export effect on growth was negative 2.6 points. According to the government's medium-term program overall GDP growth is estimated at 4.4% in 2023 and 4% in 2024.

The policy rate was kept at 8.5% by the CBRT as part of its dovish monetary policy until the elections in May 2023. Afterwards, interest rates have risen to 42.5% gradually with the new economy team by returning to orthodoxy policies. With this major change, foreign capital flow has started partly into equities and Eurobonds which is also leading to advancement in gross and net FX reserves on the CBRT side in the process of time. 45.0% terminal policy rate is predicted with a final 250bp hike in January 2024. Bringing inflation down to 8.5% in 2026, besides supporting economic growth, has been the primary target of the new management. As a consequence, commercial and consumer loan growth momentum slowed down compared to mid-2023 levels and the year ended with roughly 35% total loan growth (currency impact adjusted).

#### AZ Fund 1 - AZ Alternative - Arbitrage\*

2023 was a story of two tales for the Merger & Arbitrage World. A very difficult first half of the year, when the aggressive tightening pursued by the Fed caused a significant widening of the spreads, gave way to a more positive second half that saw the closing of some important deals.

The space was also depressed by very active regulators that derailed a few large deals, like Tegna takeover from Standard General blocked by the FCC, while First Horizon takeover by Toronto Dominion Bank was abandoned amid the regional bank crisis which erupted in the spring.

The strategy pursued a high level of concentration, with an average of 15 positions open while about 30% of the assets were invested in T-bills to take advantage of the attractive yields. In order to minimize the cost of the strategy, we have only pursued US cash deals. The biggest position and biggest positive contributor of the year was Activision Blizzard, successfully take over by Microsoft, while the biggest negative contributors were the above mentioned Tegna and First Horizon.

At the date of the merger on 29 September, the Unhedged Accumulation Retail class achieved a performance of +0,40% (USD), while the Unhedged Accumulation Institutional class was up +1,10% (USD). The benchmark (Bloomberg US Treasury Bills Total Return Index Unhedged) was up +3,65% over the same period.

### AZ Fund 1 - AZ Alternative - Capital Enhanced

During 2023 the sub-fund's performance was +3.85%, with less than 1% volatility over the same period. Over the year the sub-fund equity exposure has been taken using S&P500 options strategies like call spread collar, rather than systematic weekly call/put options selling, maintaining an adjusted delta exposure slightly positive, around +2%. The portfolio cash component has been invested over the year in a diversified portfolio of government bonds, with main focus on EU area, and residually on US. The duration has been managed between 4 and 6 months exposure with an implied yield to worst of about 3.7% average.

### AZ Fund 1 - AZ Alternative - Cat Bonds\*

2023 was the twelfth and last year of activity of the Sub-Fund (previously named AZ Cat Bond Fund Plus). The Sub-Fund was merged into the AZ Fund 1 - AZ Alternative - Capital Enhanced at the end of September 2023.

In the first nine months of 2023 the performance of the Class A - AZ Fund (ACC) - EUR hedged was +6.37%. In the first seven months of 2023 the performance of the Class A - Accumulation Institutional - USD was +7.69% (USD-denominated unit classes were terminated before the merger).

During the year, there were no major events that affected the Sub-Fund or its market. The market conditions materialized after the occurrence of hurricane lan in September 2022 remained stable during the whole 2023. Therefore, given the high premium requested in the traditional reinsurance market, many insurance companies tried to secure protection sourcing capital from capital market players. As a consequence, year 2023 registered a new record high volume of cat bond issuances in the primary market and also the trading volumes in the secondary market were quite high.

The liquidation of all assets occurred during September when the entire portfolio was sold. The liquidation process was smooth without significant liquidity or operational issues.

<sup>\*</sup> See Note 1 for further details.

#### AZ Fund 1 - AZ Alternative - Commodity

The Sub-Fund had a performance of -12.59% (Az Fund 1 Euro unit class, -9.71% in USD) versus the BCOM Total Return Index's performance of -7.91% (USD). After being the best asset class 2-years running in 2021/2022, commodities underperformed the stock and bond markets in 2023. Despite a bullish outlook on commodities for 2023, performance disappointed across all commodity sectors except for Precious Metals, as high borrowing costs, persisting inflation, geopolitical woes and disappointing Chinese recovery weighed on demand for Energy, Industrial Metals and Agriculture commodities. The post-COVID era had so far proven something of a renaissance for commodity markets, both in terms of volatility - with amongst other events the single-largest 1-year rolling maximum run-up in commodity prices since the 1990s and the longest market closure on the Nickel market - and in terms of investor interest for the asset class, commodities were seen once again as a useful transitory store of value in the context of excessive inflation and a source of positive carry. Yet, 2023 failed to provide similar returns for investors with volatility going back to historical standard levels and curves normalizing further in contango, driven by a combination of higher interest rates and slowing inflation. The Energy sector declined significantly, with Brent and WTI crude oil underperforming yet achieving positive roll yield. US Natural Gas was the weakest, affected by warm weather and high inventories. The Agriculture sector also fell, despite gains in cocoa, coffee, and sugar; grains like wheat and corn dropped notably. Livestock sector dipped slightly, with mixed performance in cattle and hog prices. Industrial Metals struggled due to weak Chinese industry and European demand, with significant losses in nickel, lead, and zinc. In contrast, Precious Metals, particularly gold, performed well as safe-haven assets amid geopolitical tensions and bank insolvency concerns, despite higher interest rates.

### AZ Fund 1 - AZ Alternative - Commodity Alpha

The performance during the year was +2.42% (EUR unit class). The Sub-Fund has an allocation of 85% in Carry strategies and 34% in Congestion strategies. The positive performance can be attributed to the Sub-Fund's strategic allocation into the Commodity sector, maintaining protection through the short commodity derivative contract. Additionally, the Sub-Fund was heavily invested in the short-term government bonds which delivered consistent return for the Sub-Fund throughout the year in the backdrop of rising yields across the globe.

### AZ Fund 1 - AZ Alternative - Core Brands\*

AZ Fund 1 - AZ Alternative - Core Brands\* has been merged into AZ Fund 1 - AZ Allocation - Global Income fund on 30 October 2023. The Sub-Fund's class AZC EUR returned -1,8% in the period starting from 30 December 2022 to 30 October 2023, below its reference index.

In the first half of the year the Sub-Fund managed to achieve a good positive performance thanks to a strong market rotation in favour of the growth and quality stocks strongly penalized during 2022 by rising interest rates. Indeed, during 1H our Tech related names, luxury and some growth staples names had a very strong performance thanks to stabilizing interest rates and expectations of a strong rebound of the Chinese economy thanks to the reopening after a year of lock down.

During Q3, inflation remained high, the economy stayed stronger than expected, driving a more dovish communication by the Central Banks. Interest rates started to rise again touching a peak level of 5% at the end of October. On one side, increasing interest rates penalised half of our investing universe made by Consumer Staples, considered as a bond proxy. On the other side worries about geopolitical issues, and particularly a very depressed consumer confidence led the underperformance of the European consumer discretionary sector, particularly exposed to Chinese demand.

Unfortunately, our hedging through European and US market index futures didn't work efficiently and didn't offer enough protection vs such specific sector underperformance.

Finally, looking at October, the last month of the Sub-Fund's life, represented the peak of interest rates and the peak of underperformance of the consumer sectors, especially the consumer staples which are highly correlated to bonds.

During the year the Sub-Fund kept an average net equity exposure between 35% and 45% and an average gross exposure of 115%. The main drivers of the underperformance were the market index futures short, and the long position in consumer staples and the out of benchmark position in healthcare that significantly underperformed the market. Consumer discretionary and IT despite the positive performance, haven't been able to fully compensate.

<sup>\*</sup> See Note 1 for further details.

#### AZ Fund 1 - AZ Alternative - Global Macro Opportunities

In 2023, the Sub-Fund generated a return of 1.48%. Throughout the year, the Sub-Fund experienced fluctuations in returns, primarily influenced by our strategic exposure to global equities, particularly in the Developed Markets (DM) of the USA and Europe, and the Chinese market, along with our engagements in credit and fixed income sectors. Our performance in 2023 was marked by proactive adjustments in response to global economic shifts and market sentiments. A key aspect of our strategy was the management of our exposure to Chinese assets. Anticipating potential market corrections, we strategically reduced our holdings in Chinese equities and bonds, especially in the earlier months. This decision was influenced by evolving economic policies in China and their potential impact on market stability. In DMs, while the US and European markets offered some positive contributions, the overall performance was offset by the underperformance in the Chinese equity and bond markets. The Sub-Fund's strategy was cautiously aligned with the anticipation of interest rate hikes and inflationary pressures, leading us to prefer short-duration investment-grade (IG) bonds. This approach stemmed from our skepticism regarding the market's expectation of peaking interest rates and a potential rate reduction towards the year's end. Maintaining a balanced risk approach, the Sub-Fund's risk exposure fluctuated modestly around 16-20%, with a consistent target exposure in Fixed Income/Credit at 65%. This risk management was crucial in navigating through periods of high market volatility, particularly in the equity sector. We leveraged these market conditions through active trading strategies and a gradual increase in risk exposure during equity market downturns. Commodity investments, specifically in silver and lithium producers, were carefully managed. We adjusted these holdings in line with market performance and our investment outlook, taking profits where prudent, such as in our lithium positions, while also divesting from others like uranium. Looking forward, in 2024, we plan to progressively add more risk exposure on the down movement of the equity market, and to increase duration of our bond exposure once the tightening cycle ends.

### AZ Fund 1 - AZ Alternative - Long/Short Europe\*

During the year, class A - AZ Fund (ACC) of the Sub-Fund achieved a performance of -3.89%.

European equity markets experienced notable gains in 2023 with the MSCI Europe climbing by 15.8% and the STOXX600 by 12,7%. Yearly advancements were observed in Italy's FTSE MIB, which soared by 28.03%, Spain's IBEX 35 with a 22.76% increase, Germany's DAX which rose by 20.31%, and France's CAC 40, registering a 16.52% gain. A prevailing sense of optimism (notably during the last 2 months of the year), driven by the anticipation of a potential shift by central banks towards reducing interest rates to shield regional economies from significant downturns, propelled the European markets upward. In contrast, London's FTSE 100 did not keep pace with most European indices, achieving a modest annual growth of 3.78%. Factors such as the index's significant exposure to mining companies dependent on China's decelerating economy, and oil-centric energy firms, coupled with a persistent inflation rate, adversely impacted the UK's leading index throughout the year.

Looking at the sector's performance, the year saw a trend reversion with cyclicals that suffered in 2022 like industrials, consumer discretionary and technology being the best sectors of 2023, and on the other side commodities driven sectors and defensives lagged meaningfully vs the broad market.

The Sub-Fund did not manage to achieve a positive return due to a more cautious positioning towards defensives and commodities, coupled with an underweight in certain cyclicals that outperformed during the year, such as technology. During the year the portfolio remained concentrated in a range of 40 long and 15/20 short positions (indexes and single stocks). The net exposure of the Sub-Fund was on average 20%. The main positions in the Sub-fund in terms of absolute weight were Raiway (Diversified Telecom), Intertek (Business Services), Enel (Utilities), Ahold (Staples) and Porsche AG (automotive).

In October 2023, the Sub-Fund merged into AZ Fund 1 - AZ Alternative - Smart Risk Premia.

### AZ Fund 1 - AZ Alternative - Momentum

The AZ Fund 1 - AZ Alternative - Momentum Class AZC EUR returned +12.24% in 2023.

In 2023 the global economic scenario has weakened, in Europe due to the negative impacts of still high inflation and monetary tightening, in emerging markets due to the dynamics of the Chinese economy which is struggling more than expected. The outlook remains sluggish and uncertain. Downside risks are predominant, mainly due to the expansion of geopolitical tensions linked to further war in the Middle East, greater international production fragmentation and possible repercussions on commodity prices. But there are also factors that can surprise on the positive side: a greater drive from robust growth in the United States and a faster-than-expected slowdown in global inflation and, therefore, an early easing of monetary policy tightening.

The Sub-Fund exploits an approach based on a variety of momentum models that are performed systematically. Momentum models spanning multiple time horizons are employed to ensure broad diversification.

During the first quarter, the Sub-Fund had a predominant allocation to short-term momentum systematic strategies. The most significant exposure was around 5% Equity, 60% US Treasury (short term), 7% Gold. All equity strategies were mostly invested on medium\large cap names in developed markets.

In the second quarter exposure to medium-term momentum strategies was prevalent. The most significant exposure was approximately 10% Equity, 60% US Treasury (short term), 7% Gold.

In the third quarter, the prevalence of medium-term strategies remained unchanged. Systematic medium-term strategies were negative contributor due to very difficult environment for systematic strategies. The most significant exposure was around 35% Equity, 50% US Treasury (short term), 7% Gold.

In the last quarter, the prevalence of medium-term strategies remained unchanged. Systematic medium-term strategies were very positive contributor and outperformed major stock indexes by approximately 50%. In this case, the most significant exposure was around 40% Equity, 70% US Treasury (long term), 7% Gold.

\* See Note 1 for further details.

#### AZ Fund 1 - AZ Alternative - Momentum (continued)

During the year, currency exposure was actively managed and used about the 5% of the exposure as a source of diversification, with tactical adjustments made also through derivatives.

Overall, on an annual basis, the Sub-Fund overperformed the reference index by about 7%. Its overperformance is to be attributed to the medium-term models that have largely increased risk exposure in the last quarter (equity + duration).

### AZ Fund 1 - AZ Alternative - Multistrategy FoF

The AZ Fund 1 - AZ Alternative - Multistrategy FoF Class AZC EUR returned -2.08% in 2023.

The first quarter of 2023 was initially driven by the positive news of China's reopening, grappling with an exacerbation of the pandemic at the end of the previous year, and the reduction in gas prices, favourable news for the European continent. The wave of positivity was challenged during February by still-supportive inflation data, which rekindled the possibility of further restrictive monetary policies and the consequent upward probability of a global recession. In addition, a spike in volatility in early March was triggered by the bankruptcy of Silicon Valley Bank and the collapse of Credit Suisse, before the intervention of the respective governments and regulators (along with the takeover of the Swiss bank by UBS) brought the situation back to clearer conditions.

During this period, the Sub-Fund altered its asset allocation first with a tactical purchase linked to the equity market and then by lightening some of the investment funds in the Equity Hedge, Event Driven and Macro areas in order to decrease the Sub-Fund's gross exposure in phases of market volatility, bringing the percentage of investment funds down to around 90%.

In the second quarter, the period's macro data showed an economy that was still resilient and supported by a reporting season with a positive tone. The most notable event of this period, and one that also led to a further market acceleration, was the increased focus on the potential of artificial intelligence, triggered after US company NVIDIA surprised investors with an upward revision of its estimates.

During the period, the Sub-Fund opened a new position in an alternative strategy focused on US equity market and options systems, which was deemed complementary to the portfolio structure and the allocated long-short equity component and brought the investment in investment strategies back above 90%.

The summer quarter initially saw a continuation of the previous uptrend, thanks in part to a reporting season without any particular negative surprises and some tentative signs that inflation might be coming down, interrupted by a rise in bond yields driven first by expectations for the Jackson Hole Symposium, a conference that remained rather moderate, and then by the September central bank meetings, which essentially reiterated the concept of 'higher rates, longer'.

During the summer period, the Sub-Fund maintained a substantially stable asset allocation, characterised only by some interventions of a strategic nature and aimed at rebalancing risk between the different components of the portfolio, maintaining a greater exposure to Equity Hedge and Macro strategies.

The last quarter of the year, after a negative month of October also due to the outbreak of the war between Israel and Palestine, saw a new market acceleration, driven by a reversal in bond yields, a still generally positive quarterly report, signs of slowing inflation and, above all, a December meeting of the Fed interpreted by the market as a turning point towards a more accommodative period.

In the latter part of the year, the Sub-Fund introduced new strategies in the Equity Hedge, Mixed Assets and Fixed Income categories. After the market correction towards the end of the summer, an efficient window was identified to add performance drivers to the portfolio without introducing excessive risk but benefiting in terms of diversification and gross exposure. At the end of the year, the Sub-Fund shows an allocation to investment funds in the region of 95%, with most of the exposure within the alternative universe.

In 2023, the Sub-Fund underperformed the reference index due to the negative impact of some strategies with intrinsic factors that lead to a negative performance in absolute and relative terms: some of these multiasset (both systematic and discretionary) and fundamental long-short strategy suffered in the year because of the high dispersion in the market.

#### AZ Fund 1 - AZ Alternative - Smart Risk Premia

The Sub-Fund performance during 2023 was -1.67%. The gross exposure has been maintained in a range between 90% and 110%. The net equity exposure has been in the range between 0% and 20% during the last year. A broad commodities component has been maintained in the portfolio during the whole year with no more than 10% weight. The year was pretty challenge during the first nine months, in fact it was not easy to generate alpha using long/short trades due the extreme market concentration in terms of performance, just few stocks have driven all the market upward trend. In the last couple of months of the year the long/short strategy started to gain and work again, in fact it was possible to recover most of the drawdown cumulated in the first half.

### AZ Fund 1 - AZ Bond - ABS

In December, the AZ Fund 1 - AZ Bond - ABS Sub-Fund produced a performance of +0.67% to close the year with 3.00% YTD, in line with the 2023s targets.

Financial markets in 2023 were characterised by economic policy decisions by central banks.

They continued with their restrictive policies that began in 2022 for the first 9 months of the 2023 with steady interest rate hikes, finally reaching all-time highs in September 2023. For example, the ECB's interest rates on the main refinancing operations, the marginal lending facility and the deposit facility stood at 4.50%, 4.75% and 4.00% respectively.

For this reason, we have seen a rather high volatility of spreads related to the world of ABS and CLOs with the XOVER index reaching an annual peak of around 520 bps in March 2023 and an annual low of around 370 bps in December 2023, in line with and as a consequence of the decision of central banks to stop, at least temporarily, the rise in interest rates from September 2023.

It was interesting to analyze how in 2023, but also in previous years characterized by, not only economic, but also geopolitical and health crises, which also strongly impacted the financial markets, the performance of the underlying of ABS and CLO securities did not deteriorate, underlining that the observed market volatility was not followed by problems related to the collateral of structured finance securities.

Despite the volatility observed, the Sub-Fund reacted well by generating positive MTD performance every month of the year, except for March 2023, and closing the year with a net performance of 3%, which corresponds to approximately 5.8% gross, maintaining annualized volatility standards, which are unique for the fund type, of 1.42% since inception.

During the year, the investment team implemented changes to the portfolio composition in order to improve credit and seniority profiles (the Sub-Fund currently has investment grade securities for around 55% of assets and senior securities for around 56%) that will allow greater stability of performance even in periods characterized by severe crises, with a consequent further improvement in the volatility standard, without however sacrificing profitability that today translates into a potential 12-month return of about 5% net.

This potential is possible because the ABS securities in which the Sub-Fund invests produce a performance with a fixed base equal to the 3-month Euribor index plus a spread, which is also fixed but varies from security to security. Today, the 3-month Euribor is around 3.9% and the forward expects a stable value and on average more than 2.5% for the next 10 years.

In addition, in December a recalibration of the portfolio was carried out also in terms of liquidity, which was already competitive at the end of November. In fact, the percentage of securities that can be liquidated within 3 days has risen from 60% at the end of November to 70% today.

Finally, the Sub-Fund as of the official NAV of 29 December 2023 has a YTM of approximately 7.8%, against a duration of 3.22 years and an average portfolio coupon of 4.20% growing.

#### AZ Fund 1 - AZ Bond - Aggregate Bond Euro

In 2023, the performance of the Sub-Fund was +5.26%.

The year started well for fixed income markets, with China reopening and the easing of the European energy crisis leading to increased risk appetite; as a consequence in January both Euro swap rates and Bund yields decreased, and the Sub-Fund generated a +2.60% performance. In February inflation data was surprisingly high and therefore rates rose again. During these two months, the Sub-Fund invested part of its excess liquidity on some of the abundant new primary market issues, with a preference for financial issuers with a high credit rating. Moreover, rate duration was managed tactically in order to generate alpha.

In March *side-effects* of the rapid rate hikes started showing up, with the crisis of Silicon Valley Bank in the US and Credit Suisse in Europe. The Fed reacted by providing liquidity to the financial system, and markets started discounting a less aggressive stance by central banks; as a consequence, Bund yields dropped, but at the same time credit spreads increased sharply (in particular on AT1s, which were hit hard by the Credit Suisse writedown). The Sub-Fund took profit on several option strategies that were put in place in order to exploit rates volatility.

In April the earnings season was generally solid, with companies often beating estimates, while in May the Fed increased rates again to 5.25%. In June central banks took a pause and did not raise rates (also because of a strong US labour market). However, they also signalled that further rate hikes were on the table, and yields rose again. Trading on interest rate options was carried out during the month.

In July - despite PMIs anticipating a slowdown in the economy - both the Fed and the ECB raised rates again, while in August inflation confirmed its downward trajectory. The Sub-Fund slightly increased exposure to sovereign issuers and marginally increased rate duration (from 6.04 at the end of June to 6.33 at the end of August). In September the Fed left its benchmark interest rate unchanged and it also materially improved its growth expectations, triggering a bear steepening. On the other hand, the ECB increased rates by 25 bps with explicit forward guidance to keep them stable until inflation reaches the 2% goal. In October, US GDP growth came out stronger than expected at 4.9% QoQ while the European economy - which is also more affected by geopolitical tensions - showed signs of deterioration (for example, German GDP -0.1% QoQ). In this environment the market started getting worried about the increasing pile of US debt at a time in which rates remained high, and the *term premium* on the US curve rose. This led to the 10Y Treasury rate surpassing the 5% level on 23 October. The Sub-Fund suffered because of the rates increase and recorded a -2.32% performance in September.

## AZ Fund 1 - AZ Bond - Aggregate Bond Euro (continued)

Then in November there was a complete U-turn in central banks' tones and the market's mood drastically changed. US inflation data came out lower than expected and Fed pivot expectations grew. The market started to price cuts in 2024 and rates dropped materially (for example, the 10Y Treasury rate ended the month at 4.33%), just like credit spreads. Finally, in December the disinflationary trend was confirmed by the latest US PCE deflator (2.6% YoY) and by European inflation (steady at 2.4%). In the last Fed meeting of the year, Fed officials delivered a dovish message and expected to cut rates 3 times during 2024 given their lower inflation forecasts. However, the market was even more aggressive than that and priced between 6 and 7 rate cuts by the Fed by the end of 2024. As a consequence, yields kept decreasing and the 10Y Treasury rate closed the year at 3.88%. During the month rate duration was reduced through options strategies, since we expect a retracement of the rates rally at the beginning of 2024. The last two months generated an excellent performance (+2.45% and +2.96% respectively) and allowed the Sub-Fund to close the year at +5.26%.

In general, during the year yields on the German curve decreased. In particular, yields moved -36 bps, -63 bps, -55 bps and -28 bps on the 2-, 5-, 10- and 30-year maturities respectively. Over the same period, the Treasury underperformed the Bund, with its spread widening by almost +55 bps on the 10-year maturity (Treasury yield was stable while Bund tightened by -55 bps).

As for European countries' spreads, performance was disappointing on the 2-year segment, with spreads vs. Germany generally remaining stable or widening (such as in the case of Finland (+15 bps), Netherlands (+19 bps), France (+39 bps) and Spain (+40 bps)). On the other hand, Core countries' spreads on the remaining tenors were stable, with the exception of Finland on the 30-year (+15 bps). Apart from the above-mentioned 2Y segment, Semi-core countries were more or less stable as well, with the only notable exception of Spain (5Y +9 bps, 10Y -12 bps and 30Y -10 bps). The real outperformers of the year were peripherals: Portugal and Italy's spreads tightened meaningfully on all main maturities (excluding 2Y, where they remained around stable). In particular, Italian spreads were down by -9 bps, -41 bps and -38 bps on the 5-, 10- and 30-year maturities respectively (Portugal -34 bps, -47 bps and -13 bps).

### AZ Fund 1 - AZ Bond - Asian Bond

In 2023, the Sub-Fund returned 3.08%. (USD institutional class) amidst a volatile bond market due to a persistent inflation and better than expected US economy that has withstood the higher interest rate unscathed.

In 2023, USD bonds were volatile due to aggressive Fed hike. However, USD bonds rallied after Fed paused the rate at 5.5% in November 23 and that caused global bonds to rally at the end of 2023. Fed has signalled that the Fed fund rate will be cut in 2024 and the bond market took that positively. YTD, the portfolio's duration was lengthened from 1y to 3y, due to expectation of rate cut in 2024.

Our minimal allocation to high yield at 6.6% also shielded the portfolio. However, our exposure to Asian local currencies was a detraction to performance in 2023 as USD continue to be resilience in 2023. Nevertheless, USD weakened since November 23 and we continue to favour Asian local currencies in 2024.

The Sub-Fund's current yield is 5.7%. The portfolio is currently with overall investment grade exposure with a duration of 2.8 years.

## AZ Fund 1 - AZ Bond - CGM Opportunities Government\*

In the period until 29 September 2023 (last NAV date of the Sub-Fund), the performance was -1.75%.

The year started well for fixed income markets, with China reopening and the easing of the European energy crisis leading to increased risk appetite; as a consequence in January both Euro swap rates and Bund yields decreased, and the Sub-Fund generated a +0.82% performance. In February inflation data was surprisingly high and therefore rates rose again. The Sub-Fund therefore suffered and saw a -1.26% performance.

In March *side-effects* of the rapid rate hikes started showing up, with the crisis of Silicon Valley Bank in the US and Credit Suisse in Europe. The Fed reacted by providing liquidity to the financial system, and markets started discounting a less aggressive stance by central banks; as a consequence, Bund yields dropped, and the Sub-Fund's performance was positive (+1.02%).

In April the earnings season was generally solid, with companies often beating estimates, while in May the Fed increased rates again to 5.25%. In June central banks took a pause and did not raise rates (also because of a strong US labour market). However, they also signalled that further rate hikes were on the table, and yields rose again.

In July - despite PMIs anticipating a slowdown in the economy - both the Fed and the ECB raised rates again, while in August inflation confirmed its downward trajectory. In September the Fed left its benchmark interest rate unchanged and it also materially improved its growth expectations, triggering a bear steepening. On the other hand, the ECB increased rates by 25 bps with explicit forward guidance to keep them stable until inflation reaches the 2% goal. In September, Bund yields rose +23 bps, +30 bps, +37 bps and +44 bps on the 2-, 5-, 10- and 30-year maturities respectively, and the Sub-Fund therefore had a negative performance (-1.26%).

On 29 September, the Sub-Fund was merged into the AZ Fund 1 - AZ Bond - Euro Aggregate Short Term.

In general, during the period ranging from year-end 2022 to the end of September 2023, yields on the German curve increased. In particular, yields moved +44 bps, +20 bps, +27 bps and +49 bps on the 2-, 5-, 10- and 30-year maturities respectively. Over the same period, the Treasury underperformed the Bund, with its spread widening by +42 bps on the 10-year maturity (Treasury yield +69 bps while Bund +27 bps).

<sup>\*</sup> See Note 1 for further details.

#### AZ Fund 1 - AZ Bond - CGM Opportunities Government\* (continued)

Over the same period - given this increase in interest rates - European government bonds' spreads tended to widen. As for Core countries, spreads widened on almost all maturities (+7/+10 bps on the 5Y tenor, +4/+12 bps on the 30Y, 10Y stable). In the 2Y segment, Finland +17 bps and Austria +12 bps but Netherlands almost unchanged. Semi-core countries saw a widening trend as well, with the exception of Spain on the 30Y segment which was stable. The 2Y segment saw the biggest widening (+16/+24 bps) while the 10Y tenor was more or less stable. Finally, Peripherals performed well on the 10Y tenor, with Italy and Portugal tightening by -20 and -27 bps respectively. Italy was more or less stable in terms of spread vs. Germany on the 5- and 30-year maturity, while it widened by 27 bps on the 2Y one, similarly to what we saw with Spain. On the other hand, Portugal outperformed on the 30-year segment (-30 bps).

### AZ Fund 1 - AZ Bond - Convertible

2023, a year with a thousand faces but which finally began to return satisfaction, after the nightmare of 2022 with unprecedented losses for the bond world. The elements that punctuated the year were 1) the failure of some American banks and the incorporation of Credit Suisse into UBS in March, 2) the surprising strength of growth dynamics and of the labor market in the United States in the middle phase, with the widespread feeling of having to deal with higher rates for longer, 3) stronger signs of disinflation during the last quarter, from core inflation in the United States to various measures of inflation in Europe and the rest of the world, which led to 4) the Fed's sort-of-pivot at the end of the year, fueling the sharp decline in yields and an incredible recovery in bonds with spectacular performances in November - the best month in history - and December.

Bond yields for the year, however, remained almost unchanged in the United States, while they fell in Europe, with inflation declining but still substantial. Credit spreads have also fallen, with emphasis in the speculative world, despite a generalized increase in the default rate globally. The decline in volatility and the performance of equities (MSCI World in US dollars +24.4%, SPX +26.2%, Eurostoxx50 +23.2%) have certainly contributed to this constructive environment for High Yield. Credit returns were generally positive: IG US +8.4%, HY US +13.4%, IG EU +8.0%, HY EU +12%, Emerging +10.3%, global aggregate bonds +4.2%. Italian government bonds also performed well, +12.0% on maturities over 5 years, with spreads on the German curve shrinking (from 215 to 165 basis points).

A particularly complicated economic and financial environment remains, with many variables that will continue to impact the scenario, including geopolitics; For the time being, however, a significant return of volatility seems to be excluded. The downward path of inflation seems to be able to extend to 2024, while growth, albeit weakening, should remain positive. Central banks have room to adjust monetary policy while continuing to reabsorb liquidity, albeit in an environment where new issuance by governments could be higher than seen in recent years.

In 2023, the Sub-Fund recorded a positive performance, +1.06% (class A ACC). The portfolio benefitted mostly from Information Technology, Industrials and Consumer Discretionary sectors exposure.

The worst contributors were Healthcare, Utilities and Renewables. Portfolio's delta was 49% on average and moved in a range between 46% and 54%. The hedging exposures both on equity and duration had a negative impact during the first half, considering all the negative catalyst that were affecting the macroeconomic picture, US regional Banks failures and Credit Suisse saga in Europe the most relevant. In the second half the portfolio was impacted mostly by credit deterioration and government bond rising yields, but the amazing performance of fixed income in the last 2 months helped recovering previous losses.

Exposure to the US has been gradually increased, in line with the transition of the Sub-Fund to a more global exposure. This process will continue by exploiting the best opportunities in both secondary and primary markets.

In 2023, a significant narrative unfolded with the remarkable surge in the technology sector, primarily fueled by the enthusiasm surrounding artificial intelligence. The NASDAQ, reflecting this trend, exhibited a remarkable total return increase of over 55%. Despite the tech-centric nature of the market, convertible bond issuers predominantly represent earlier-stage and smaller entities, with a median equity market capitalization slightly exceeding \$5 billion.

Consequently, the underlying shares of convertible bonds failed to fully capture the substantial upside driven by large-cap tech stocks, acting as a limiting factor on CB market returns for most of the year, particularly in comparison to large-cap equity indices.

## AZ Fund 1 - AZ Bond - Emerging Hard Currency FoF

During 2023, the main unit class (A-AZ Fund) produced a performance of +0.49%.

It is a global bond fund that invests in dollar denominated bonds ("Hard Currency") through third party funds.

After the quickest rise in the US yield curve experienced in 2022 the Fed funds rate continued to increase up to 5.5% till the end of July. The net exposure remained in a range between 96% and 103% for the entire year. The fund was always invested with third party funds in a range between 90% and 96%.

In the first part of the year there was a partial reshuffle on the fund composition increasing the exposure for around 30% on hard currency Asian bonds and increasing around 20% of Hard currency fund with normal duration. In February the exposure on Asian bonds was reduced for around 18% whilst the exposure on short duration hard currency funds was increased for the same amount. After the rise in volatility due to the collapse in SVB bank and Credit Suisse the Sub-Fund manager decided to sell the entire exposure on Asian Hard currency bonds increasing the exposure on short term strategies that are less affected by potential spread enlargement. The inversion of the US yield curve in the first part of the year came from the assumption that the economy would slow down later in the year, therefore at the end of the second quarter almost 45% of the entire portfolio was invested in the short-term strategies that are less exposed to rise in interest rates and to spread enlargement too.

<sup>\*</sup> See Note 1 for further details.

## AZ Fund 1 - AZ Bond - Emerging Hard Currency FoF (continued)

In the third quarter the yield curve experienced a strong rise on the long end of the curve mainly from August onwards. At the beginning it was justified with the strength of the US economy supported by a strong job market. On the other hand, it seemed there was selling pressure on the bond markets due to the oversupply generated by a strong fiscal deficit in the USA. Moreover, the end of the negative base effect on inflation caused by the oil price made the financial community think that we could have an unexpected further rise in inflation in the second half of the year. The Sub-Fund manager reduced the exposure on normal duration funds by around 13%, increasing for the same amount the exposure on short term strategies. By the end of the third quarter the exposure on normal duration funds was around 37% whilst the exposure on short-term strategies was around 60%. Dollar exposure was around 108%.

The last quarter of the year was characterized, in October, by an increase in volatility due to the geopolitical tension in the Middle East but then, after the FOMC statements, at the beginning of November the bond markets experienced a strong rally. At the end of the year the Fed reassured the markets that we are probably at the pivot and from next year we can experience multiple rate cuts. From November till the end of December the markets discounted 7 rate cuts with a drop in the 10-year treasury yield of around 120 basis points from the peak of October: During the quarter the exposure on normal duration funds increased up to 72% whilst the exposure on short term strategies was reduced to 23%.

The Sub-Fund invests in USD bonds, and it is totally open to fluctuation in the EUR USD exchange rate; for most part of the year the Sub-Fund presented a further exposure of 8% in dollars through cash and Forward contract.

Portfolio duration was in a range of 3.5 years and 5.5 for the entire 2023.

#### AZ Fund 1 - AZ Bond - Enhanced Yield

2023, a year with a thousand faces but which finally began to return satisfaction, after the nightmare of 2022 with unprecedented losses for the bond world. The elements that punctuated the year were 1) the failure of some American banks and the incorporation of Credit Suisse into UBS in March, 2) the surprising strength of growth dynamics and of the labor market in the United States in the middle phase, with the widespread feeling of having to deal with higher rates for longer, 3) stronger signs of disinflation during the last quarter, from core inflation in the United States to various measures of inflation in Europe and the rest of the world, which led to 4) the Fed's sort-of-pivot at the end of the year, fueling the sharp decline in yields and an incredible recovery in bonds with spectacular performances in November - the best month in history - and December.

Bond yields for the year, however, remained almost unchanged in the United States, while they fell in Europe, with inflation declining but still substantial. Credit spreads have also fallen, with emphasis in the speculative world, despite a generalized increase in the default rate globally. The decline in volatility and the performance of equities (MSCI World in US dollars +24.4%, SPX +26.2%, Eurostoxx50 +23.2%) have certainly contributed to this constructive environment for High Yield. Credit returns were generally positive: IG US +8.4%, HY US +13.4%, IG EU +8.0%, HY EU +12%, Emerging +10.3%, global aggregate bonds +4.2%. Italian government bonds also performed well, +12.0% on maturities over 5 years, with spreads on the German curve shrinking (from 215 to 165 basis points).

A particularly complicated economic and financial environment remains, with many variables that will continue to impact the scenario, including geopolitics; For the time being, however, a significant return of volatility seems to be excluded. The downward path of inflation seems to be able to extend to 2024, while growth, albeit weakening, should remain positive. Central banks have room to adjust monetary policy while continuing to reabsorb liquidity, albeit in an environment where new issuance by governments could be higher than seen in recent years.

In 2023, the Sub-Fund recorded a positive performance, +2.6% (class A ACC), thanks to the contribution of Italian, German and Spanish government bonds and despite the negative contribution of derivative positions aimed at reducing overall duration exposure. The contribution of bank deposits was marginally positive, given the banks' resistance to adjusting remuneration to market rates, an adjustment that only took place in the second half of the year. The duration of the portfolio has always been below 2 years, while the duration including derivatives has been flexibly managed according to the short-term rate environment, in recent months staying around 1.5 years. At a strategic level, there are no significant changes, the portfolio is still structured with about 30%-35% in deposits, just under 20% in government bonds with a residual maturity of less than 2 years and the remaining part over 24 months, mostly Italian. The gross yield stands at around 2.8%. The aim is to benefit from the yield on bonds and the potential narrowing of the Italy/Germany spread.

### AZ Fund 1 - AZ Bond - Euro Aggregate Short Term

2023 was a volatile year for financial markets, that continued to be mainly driven by inflation dynamics and Central Banks' monetary policy measures.

After a positive start to the year, driven by easing inflationary pressures and an overall improvement in the economic outlook, the collapse of Californian lender SVB delivered the first setback, temporarily shifting the markets' focus from inflation to financial stability and causing a contagion effect to other financial institutions across the Atlantic. The situation was contained by the prompt intervention of the Fed, that managed to preserve the depositors by instituting the Bank Term Funding Program (BTFP), a facility designed to provide additional funding to financial institutions. Moreover, several consolidation initiatives were promoted, both in Europe and in the US, with the notable case of the takeover of Credit Suisse by UBS, that led to the complete write-down of the Swiss lender's AT1 bonds.

Despite the financial stability concerns, Fed and ECB stayed the course and continued delivering further hikes until July and September, respectively. Overall, their tone remained cautious, but the tilt swung between hawkish and dovish across the spring/summer months - tracing inflation and labor market data - and caused some volatility in the mid months of the year.

Against this backdrop, the investment management team increased the duration exposure - within the limits of the Sub-Fund - via European government bonds as yield reached increasingly attractive levels, while also dynamically managing the overall duration profile through derivatives.

#### AZ Fund 1 - AZ Bond - Euro Aggregate Short Term (continued)

Central Bankers' tone took a decisive hawkish tilt in the autumn, when the narrative shifted from additional hikes to the length of the tightening period. This higher-for-longer rhetoric, combined with persistently higher sovereign deficit levels, brought about debt sustainability concerns and triggered a large bear steepening move on yield curves, leading to significant losses across maturities and the long end in particular.

In this phase, the management team bought protection on Italy via CDS, which helped containing the Sub-Fund's volatility during the short-lived period characterized by renewed concerns about Italy's debt sustainability.

This trend saw a sharp reversal from the beginning of November, when financial markets experienced the largest 2-months rally in the post-COVID period. The rally was propelled in November by the US Treasury Quarterly Refunding Announcement, which delivered a recalibration of the issuance profile less skewed toward longer maturities, combined with an explicit communication of a flexible approach aimed at containing excessive volatility in the Treasury market. Dovish comments from several Central Bank officials - Waller and Powell in primis - threw fuel to the fire, as well as lower than expected inflation readings on both sides of the Atlantic.

While continuing to dynamically manage the duration profile of the Sub-Fund, the investment management team also profited from the normalization in the shape of the long end of the US curve, implementing a received position on 10s20s30s US butterflies.

The Sub-Fund recorded a positive performance during the year, keeping a low volatility profile throughout the course of the year, as a result of its contained duration profile.

The Sub-Fund closed the year with a NAV/unit of EUR 6.515 and a yearly performance of 4.54%.

#### AZ Fund 1 - AZ Bond - Euro Corporate

In 2023, the performance of the Sub-Fund was +6.01%.

The year started well for fixed income markets, with China reopening and the easing of the European energy crisis leading to increased risk appetite; as a consequence in January both Euro swap rates and Euro IG credit spreads decreased, and the Sub-Fund generated a +2.32% performance. In February inflation data was surprisingly high and therefore rates rose again. During these two months, the Sub-Fund invested part of its excess liquidity on some of the abundant new primary market issues, with a preference for financial issuers with a high credit rating. Moreover, rate duration was managed tactically in order to generate alpha.

In March side-effects of the rapid rate hikes started showing up, with the crisis of Silicon Valley Bank in the US and Credit Suisse in Europe. The Fed reacted by providing liquidity to the financial system, and markets started discounting a lower terminal rate; as a consequence, yields dropped, but at the same time credit spreads increased sharply (in particular on AT1s, which were hit hard by the Credit Suisse write-down). The Sub-Fund increased its credit quality by investing liquidity in short-term highly-rated core government bonds; moreover, it cut its exposure to AT1s to less than 1% and increased its rate duration. It also took profit on several option strategies that were put in place in order to exploit rates volatility.

In April the earnings season was generally solid, with companies often beating estimates, while in May the Fed increased rates again to 5.25%. In June central banks took a pause and did not raise rates (also because of a strong US labour market). However, they also signalled that further rate hikes were on the table, and yields rose again. Trading on interest rate options was carried out during the month.

In July - despite PMIs anticipating a slowdown in the economy - both the Fed and the ECB raised rates again, while in August inflation confirmed its downward trajectory. The Sub-Fund increased exposure to financial issuers (in particular Senior Preferred instruments) and marginally increased rate duration (from 4.49 at the end of June to 5.05 at the end of August). In September the Fed left its benchmark interest rate unchanged and it also materially improved its growth expectations, triggering a bear steepening. On the other hand, the ECB increased rates by 25 bps with explicit forward guidance to keep them stable until inflation reaches the 2% goal. In October, US GDP growth came out stronger than expected at 4.9% QoQ while the European economy - which is also more affected by geopolitical tensions - showed signs of deterioration (for example, German GDP -0.1% QoQ). In this environment the market started getting worried about the increasing pile of US debt at a time in which rates remained high, and the *term premium* on the US curve rose. This led to the 10Y Treasury rate surpassing the 5% level on 23 October. The Sub-Fund suffered because of the rates increase and recorded a -1.40% performance in September and -0.12% in October.

Then in November there was a complete U-turn in central banks' tones and the market's mood drastically changed. US inflation data came out lower than expected and Fed pivot expectations grew. The market started to price cuts in 2024 and rates dropped materially (for example, the 10Y Treasury rate ended the month at 4.33%), just like credit spreads. Finally, in December the disinflationary trend was confirmed by the latest US PCE deflator (2.6% YoY) and by European inflation (steady at 2.4%). In the last Fed meeting of the year, Fed officials delivered a dovish message and expected to cut rates 3 times during 2024 given their lower inflation forecasts. However, the market was even more aggressive than that and priced between 6 and 7 rate cuts by the Fed by the end of 2024. As a consequence, yields kept decreasing and the 10Y Treasury rate closed the year at 3.88%. During the month exposure to AT1s was cut, and a long position on the iTraxx Xover index was opened on the expectation that credit spreads were excessively tight. Rate duration was reduced through options strategies, since we expect a retracement of the rates rally at the beginning of 2024. The last two months of the year generated an excellent performance (+2.64% and +2.30% respectively) and allowed the Sub-Fund to close the year at +6.01%.

### AZ Fund 1 - AZ Bond - Frontier Markets Debt

AZ Fund 1 - AZ Bond - Frontier Markets Debt is a feeder fund of AZ Fund 3 - AZ Bond - Frontier Markets Debt (the "master fund"). The following commentary is a review of the performance of the master fund:

AZ Fund 3 - Frontier Markets Debt (A Inst USD) reported a 11.81% net return in 2023. The positive performance was driven by a spectacular comeback of external frontier debt, with the JPM NEXGEM Index closing the year with a 21% total return pulled by Asia where Pakistan scored +100% and Sri Lanka +71%, followed by Africa with Zambia total return at +38.85%, Tunisia's +29.57% and Nigeria's +28.7%; to finish in Latin America where El Salvador bonds averaged a +116% performance.

The master fund is blended with a prominent component in local currency; this latter performed more modestly: in the same postcodes of external debt outperformance we witnessed the most dramatic foreign exchange adjustment since the nineties. In Africa Nigeria Naira lost 95%, Angola Kwanza lost 65%, Zambia Kwacha lost 51% and Turkish Lira lost 57%. However the largest local foreign exchange position in the master fund (Kazakhstan Tenge, Uruguay and Dominican Pesos and Uganda Shilling) held better the ground in the spot market and the inflation convergence helped easing of monetary conditions prompting a rally in interest rates.

The main emerging market fixed income market did well thanks to a rally in US Treasuries the last two months of 2023. Notably inflows in the asset class have remained subdued as asset allocators shy away from emerging market as bonds offer a limited premium to USD money market rates. We expect a significant improvement in inflows should the Federal Reserve cut interest rates later in 2024 without a material deterioration of the growth prospect.

Looking at the regional allocation we remain overweight Latin America where the latest trade surplus records are extraordinary and the concerns on the concerns on the negative effects of the El Nino weather phenomenon are fading. We remain also overweight Africa where regained access to external market funding could change the prospect for local currency performance. We are instead underweight Asia where the limited fiscal and monetary stimulus is unlikely to be revisited before the Fed starts its easing cycle; stagnant growth and low interest rates don't create many opportunities yet in frontier fixed income.

#### AZ Fund 1 - AZ Bond - Global Macro Bond

2023 saw the second largest bank failure in history, the takeover of Credit Suisse, the continuation of what resulted in the worst bear market even in US Treasuries and the sharpest monthly rally in US bonds since 1985. Market performance in 2023 marked a clear departure from 2022, with several asset classes performing both better than they did in 2022 and above consensus expectations. Although, over the course of the year, the impact of tightening started to bite on some segments of the economy, the combination of fiscal support, rising wages and declining inflation provided a supportive mix for economic activity and, ultimately, risk assets.

The Sub-Fund started the year with an asset allocation with a medium risk profile, resulting from the combination of a credit portfolio with medium-low duration, long exposure to US Treasuries and selective long exposure to the EM.

As the regional bank crisis in the US unfolded, the Sub-Fund increased its exposure to the 5y segment of the US Treasury curve, cushioning the adverse impact of heightened volatility. The long exposure to US Treasuries also helped navigating the wild moves surrounding the takeover of Credit Suisse. In the aftermath of the Swiss lender's takeover announcement, the team exploited the sharp selloff in AT1 bonds to add exposure to financial subordinated debt, focusing predominantly on larger financial institutions & national champions. Towards the end of the summer, as government bond yields had increased considerably and prospects of an economic slowdown on both sides of the Atlantic became more likely, the team began to extend again the duration profile of the Sub-Fund, mainly via US Treasuries. The sell off in global fixed income extended more than expected, hurting risk assets, as well as the Sub-Fund's performance up until the end of October, but reversed sharply in the final two months of the year, rewarding the decisions to increase duration and dial up the overall risk profile of the Sub-Fund.

Throughout the year, the team followed a disciplined approach, consistently recalibrating the composition of the credit portfolio according to broader macro dynamics and issuer/issue specific factors.

On FX, the Sub-Fund traded around its long USD while re-establishing long exposure to currencies which screened as very cheap on a valuation basis, such as CLP, JPY, NOK and ZAR and very attractive in terms of real yields, such as COP and BRL. In the latter part of the year the Sub-Fund added long exposure to AUD, which was almost entirely closed by the end of the year.

Year-end NAV/unit (institutional class): EUR 5.344

Performance: +8.07%

## AZ Fund 1 - AZ Bond - Green & Social

The AZ Fund 1 - AZ Bond - Green & Social Class AZC EUR returned +4.63% in 2023.

2023, a year with a thousand faces but which finally began to return satisfaction, after the nightmare of 2022 with unprecedented losses for the bond world. The elements that punctuated the year were 1) the failure of some American banks and the incorporation of Credit Suisse into UBS in March, 2) the surprising strength of growth dynamics and of the labor market in the United States in the middle phase, with the widespread feeling of having to deal with higher rates for longer, 3) stronger signs of disinflation during the last quarter, from core inflation in the United States to various measures of inflation in Europe and the rest of the world, which led to 4) the Fed's sort-of-pivot at the end of the year, fueling the sharp decline in yields and an incredible recovery in bonds with spectacular performances in November - the best month in history - and December.

#### AZ Fund 1 - AZ Bond - Green & Social (continued)

Bond yields for the year, however, remained almost unchanged in the United States, while they fell in Europe, with inflation declining but still substantial. Credit spreads have also fallen, with emphasis in the speculative world, despite a generalized increase in the default rate globally. The decline in volatility and the superior performance of equities have certainly contributed to this constructive environment for High Yield. Credit returns were generally positive, with double-digit ones for High Yield bonds.

A particularly complicated economic and financial environment remains, with many variables that will continue to impact the scenario, first and foremost the ongoing reabsorption of liquidity by central banks. Caution is warranted, not least because in the presence of a potential slowdown in growth, a return of volatility cannot be ruled out. The management team, however, is considering the idea that positive surprises from global growth could arise overtime, as a result of China finally reigniting its internal dynamics and the developed world experiencing the usual exit from a shock (in this case the inflationary shock we just went through), with higher sentiment from companies and confidence from consumers supporting expenditures. It is definitely possible to see a macro picture of lower but higher than expected growth, and lower inflation, even if little higher than the pre-pandemic era

The Sub-Fund performance was slightly below GREN and SSAG Index which stands in the region of 5%. This is due to the exposure to subs, hammered after the Credit Suisse rescue, real estate that was been heavy through the whole year due to the interest rate environment, and to the lower duration compared to indexes partially compensated via futures. The Sub-Fund spread duration is 3.3 years while rates sensitivity is close to 5.7 years, gross yield sits at 5.5%. Portfolio composition is 51% IG rated and 43% HY rated, 83% is on corporate bond, 7% emerging markets bond and 4% government and supranational bond. Main positions are 34% hybrids, 30% financial (18% subs), 14% corporate bonds, with HY at 5%. In a mid-term horizon we confirm the current portfolio composition: credit fundamentals are solid and companies, in particular investment grade that represent 73% of the portfolio, can face the complicated economic scenario with geopolitical tension and fluctuating macroeconomic data. Credit valuation, given the recent volatility, seems compelling, both in yield terms and for a potential spread tightening if we'll see a stabilization in markets and improvements in China.

## AZ Fund 1 - AZ Bond - High Income FoF

For the calendar year 2023 the primary unit class (A-AZ Fund) of AZ Fund 1 - AZ Bond - High Income FoF had a performance of -0.54%.

AZ Fund 1 - AZ Bond - High Income FoF is a fund of funds investing in a wide range of global bonds, without any constraints in terms of rating, countries, currencies and/or issuer types. The Sub-Fund actively manages the credit risk exposure, with a preference for higher yielding securities like high yields and emerging market debt. A non-exhaustive list of fixed income strategies International Bond is allowed to invest in are corporate bonds (investment grade and high yield), convertible bonds, emerging market bonds (investment grade and high yield), total return funds.

The Sub-Fund began the year with a strong change in the asset allocation: after the massive drawdown in 2022 in the bond markets, its duration was increased in the portfolio throughout the first quarter.

At the beginning of the year the duration in the portfolio was increased with a higher exposure on the 5-year US Treasury through futures and partially closing some short positions on the European curve. After the strong rally in January part of the long exposure was reduced again mainly opening short positions on BTP futures. However, the unexpected wording from the central bankers induced the Sub-Fund manager to reduce the gross exposure in February. During the US banking crisis of SVB the BTP were supposed to better hedge the entire portfolio betting on spread enlargement. This scenario did not take place and the Sub-Fund manager slowly reduced the gross exposure, increasing the duration that, at the end of the quarter, was close to minus one. During the SVB and Credit Suisse failure the manager decided to drastically cut to half any exposure on high yield and emerging debt assuming that in 6 to 9 months any possible financial restriction could lead to recession causing a strong spread enlargement on the asset class.

During the second quarter the long part of the portfolio did not experience any major change. The idea to support this conservative approach was related to the fact that having real rates at the highest level in the last few decades could suddenly cause a deep recession in the months ahead. Therefore, the long part of the portfolio was mainly invested in short term treasuries for around 25%, absolute return strategies for around 13%, short term aggregate for around 30%, emerging debt around 13%. The duration slightly increased throughout the quarter mainly closing some short positions on BTP and German bund. The main short position still in place was related to the 10 years Japanese government bond, whose negative carry was still manageable being close to zero.

During the third quarter there were different macroeconomic data that could be interpreted as a slowdown in the economy was coming either in the US with a strong discrepancy between GDP and GDI, but also with an even clearer slowdown in Europe and China. The yield curve experienced a strong rise in the long end of the curve from August onwards. At the beginning it was justified with the strength of the US economy supported by a strong job market. On the other hand, it seemed there was selling pressure on the bond markets due to the oversupply generated by a strong fiscal deficit in the USA. Moreover, the end of the negative base effect on inflation caused by the oil price made the financial community think that we could have an unexpected further rise in inflation in the second half of the year. Throughout the quarter the Sub-Fund manager slowly increased the portfolio duration but with a bias on the safer part of the bond spectrum, going long duration on US Treasuries and German Bund and opening short positions on French OAT, Italian BTP, and Japanese Government Bonds. duration was around 2.4 years but with 6.5 years long duration on US Treasuries and Bund and short on Italian BTP, Japanese JGB for around 4 years.

#### AZ Fund 1 - AZ Bond - High Income FoF (continued)

The last quarter of the year was characterized, in October, by an increase in volatility due to the geopolitical tension in the Middle East but then, after the FOMC statements, at the beginning of November the bond markets experienced a strong rally. At the end of the year the FED reassured the markets that we are probably at the pivot and from next year we can experience multiple rate cuts. From November till the end of December the markets discounted 7 rate cuts with a drop in the 10-year treasury yield of around 120 basis points from the peak of October. Duration initially increased, closing short positions on BTP, and buying further exposure on the US curve and German Bund; only at the end of November it was tactically reduced the duration selling treasuries and Bund. In December the duration increased again, raising the exposure on 2,5,10, and 20 years Treasuries and keeping short positions on bund and Japanese 10 years bond. Throughout the quarter the exposure on emerging debt and Asian debt was increased on rumors that possible support from the central Chinese government was coming to support the real estate sector. The duration by year end was around 1.7 years.

### AZ Fund 1 - AZ Bond - High Yield

2023 saw the second largest bank failure in history, the takeover of Credit Suisse, the continuation of what resulted in the worst bear market even in US Treasuries and the sharpest monthly rally in US bonds since 1985. Market performance in 2023 marked a clear departure from 2022, with several asset classes performing both better than they did in 2022 and above consensus expectations. Although, over the course of the year, the impact of tightening started to bite on some segments of the economy, the combination of fiscal support, rising wages and declining inflation provided a supportive mix for economic activity and, ultimately, risk assets.

The Sub-Fund started the year with an asset allocation with a medium-high risk profile, resulting from the combination of a credit portfolio with medium duration exposure and a long exposure to subordinated debt (particularly financial CoCos).

As the regional bank crisis in the US unfolded, the Sub-Fund increased its exposure to the 5y segment of the US Treasury curve via future contracts, cushioning the adverse impact of heightened volatility. Moreover, the investment management team dealt with the more acute volatility phases by actively managing the Sub-Fund's exposure to financial credit risk using CDS Subfin. In the aftermath of the Swiss lender's takeover announcement, the team exploited the sharp selloff in AT1 bonds to add exposure to financial subordinated debt, focusing predominantly on larger financial institutions & national champions.

Towards the end of the summer, as government bond yields had increased considerably and prospects of an economic slowdown on both sides of the Atlantic became more likely, the team began to extend again the duration profile of the Sub-Fund, mainly via future contracts on US Treasuries. The sell off in global fixed income extended more than expected, hurting risk assets, as well as the Sub-Fund's performance up until the end of October, but reversed sharply in the final two months of the year, rewarding the decisions to increase duration and dial up the overall risk profile of the Sub-Fund.

Throughout the year, the team followed a disciplined approach, consistently recalibrating the composition of the credit portfolio according to broader macro dynamics and issuer/issue specific factors.

Year-end NAV/unit (institutional class): EUR 5.348

Performance: +13.19%.

## AZ Fund 1 - AZ Bond - Hybrids\*

2023, a year with a thousand faces but which finally began to return satisfaction, after the nightmare of 2022 with unprecedented losses for the bond world. The elements that punctuated the year were 1) the failure of some American banks and the incorporation of Credit Suisse into UBS in March, 2) the surprising strength of growth dynamics and of the labor market in the United States in the middle phase, with the widespread feeling of having to deal with higher rates for longer, 3) stronger signs of disinflation during the last quarter, from core inflation in the United States to various measures of inflation in Europe and the rest of the world, which led to 4) the Fed's sort-of-pivot at the end of the year, fueling the sharp decline in yields and an incredible recovery in bonds with spectacular performances in November - the best month in history - and December.

Bond yields for the year, however, remained almost unchanged in the United States, while they fell in Europe, with inflation declining but still substantial. Credit spreads have also fallen, with emphasis in the speculative world, despite a generalized increase in the default rate globally. The decline in volatility and the performance of equities (MSCI World in US dollars +24.4%, SPX +26.2%, Eurostoxx50 +23.2%) have certainly contributed to this constructive environment for High Yield. Credit returns were generally positive: IG US +8.4%, HY US +13.4%, IG EU +8.0%, HY EU +12%, Emerging +10.3%, global aggregate bonds +4.2%. Italian government bonds also performed well, +12.0% on maturities over 5 years, with spreads on the German curve shrinking (from 215 to 165 basis points).

A particularly complicated economic and financial environment remains, with many variables that will continue to impact the scenario, including geopolitics; For the time being, however, a significant return of volatility seems to be excluded. The downward path of inflation seems to be able to extend to 2024, while growth, albeit weakening, should remain positive. Central banks have room to adjust monetary policy while continuing to reabsorb liquidity, albeit in an environment where new issuance by governments could be higher than seen in recent years.

<sup>\*</sup> See Note 1 for further details.

#### AZ Fund 1 - AZ Bond - Hybrids\* (continued)

In October 2023 the Sub-Fund was merged into AZ Fund 1 - AZ Bond - Sustainable Hybrid. Until then, it had posted a marginally positive performance, +0.8% (class A ACC), as the rising rate environment had eroded much of the yield exhibited by securities at the beginning of the year. The securities portfolio has always had a duration of more than 3.5 years, while the duration including derivatives has been very actively managed, starting from conservative positions and increasing it even beyond 5 years in the second half of the year in conjunction with the rise in rates: the aim was to provide the portfolio with an additional instrument to benefit from the potential reduction in government yields in a context in which inflation was progressively falling. Activity during the year focused 1) on the management of cash flows, which tended to be outflows, and 2) on the use of the primary market to continuously improve the profile of the portfolio, with newly issued securities representing just over 20% of assets before the merger. At a strategic level, there have been no significant changes, the portfolio has always remained structured with approximately 50% in corporate hybrids and the remainder in subordinated financials, with no meaningful currency exposures. Within the latter, CoCos have been gradually increased to over 17%.

#### AZ Fund 1 - AZ Bond - Income Dynamic

2023, a year with a thousand faces but which finally began to return satisfaction, after the nightmare of 2022 with unprecedented losses for the bond world. The elements that punctuated the year were 1) the failure of some American banks and the incorporation of Credit Suisse into UBS in March, 2) the surprising strength of growth dynamics and of the labor market in the United States in the middle phase, with the widespread feeling of having to deal with higher rates for longer, 3) stronger signs of disinflation during the last quarter, from core inflation in the United States to various measures of inflation in Europe and the rest of the world, which led to 4) the Fed's sort-of-pivot at the end of the year, fueling the sharp decline in yields and an incredible recovery in bonds with spectacular performances in November - the best month in history - and December.

Bond yields for the year, however, remained almost unchanged in the United States, while they fell in Europe, with inflation declining but still substantial. Credit spreads have also fallen, with emphasis in the speculative world, despite a generalized increase in the default rate globally. The decline in volatility and the performance of equities (MSCI World in US dollars +24.4%, SPX +26.2%, Eurostoxx50 +23.2%) have certainly contributed to this constructive environment for High Yield. Credit returns were generally positive: IG US +8.4%, HY US +13.4%, IG EU +8.0%, HY EU +12%, Emerging +10.3%, global aggregate bonds +4.2%. Italian government bonds also performed well, +12.0% on maturities over 5 years, with spreads on the German curve shrinking (from 215 to 165 basis points).

A particularly complicated economic and financial environment remains, with many variables that will continue to impact the scenario, including geopolitics; For the time being, however, a significant return of volatility seems to be excluded. The downward path of inflation seems to be able to extend to 2024, while growth, albeit weakening, should remain positive. Central banks have room to adjust monetary policy while continuing to reabsorb liquidity, albeit in an environment where new issuance by governments could be higher than seen in recent years.

In 2023, the Sub-Fund recorded a positive performance, +4.2% (class A ACC), thanks to corporate positions and medium-to-short-maturity government bonds and despite the negative contribution of derivatives aimed at reducing overall duration exposure. The duration of the portfolio has always gravitated towards 2.5 years, while the duration including derivatives has been managed flexibly according to the short-term rate environment, in recent months staying between 1.5 and 2 years. Activity during the year focused on the management of outflows; participation in the primary market has been minimal, with newly issued securities representing approximately 4% of assets to date. The portfolio has been structured for most of the year with about 50% in government bonds, both Italian and Spanish, and the remainder in corporate debt. In the latter part of the year, given the context of falling government yields and stable credit spreads, repayments were met by reducing the government part to the current 35%, while the percentage of medium-to-short-dated corporates rose above 60% (around 20% High Yield and the remainder Investment Grade). The gross yield is around 3.9%. The aim is to benefit from the simple yield to maturity of securities, both corporate and government: given the current levels and duration of the product, this seems a very attractive proposition.

### AZ Fund 1 - AZ Bond - Inflation Linked

In 2023, the AZ Fund 1 - AZ Bond - Inflation Linked Sub-Fund recorded a positive performance of 3.89% (class A ACC). The portfolio has increased the duration at the beginning of the year and this allowed the fund to benefit from the fall in global government yields: the duration of the fund has been between 4 and 5.5 for most of the year. Inflation expectations as priced by the bond market have been falling in Europe but they were stable in the US and in other major markets: inflation has trended downwards during the year. The portfolio was made up of 70% inflation-linked securities and 25% of floating-rate corporate securities. The exposure to currencies other than the EUR has been under 20% for all year. The main positions were on the LATAM currencies: Mexican, Chilean and Colombian pesos. From a geographical standpoint the fund overweighed areas were fixed income securities screened as cheaper as Canada and Australia. Going into 2024 the exposure to inflation linkers will be unchanged as no large moves are expected in break evens. The exposure to global interest rates will be kept on the high end as we expect central banks to start their cutting cycle in the send half of the year.

#### AZ Fund 1 - AZ Bond - International FoF

For the calendar year 2023 the primary unit class (A-AZ Fund) of AZ Fund 1 - AZ Bond - International FoF had a performance of -1.49%.

AZ Bond - International FoF is a fund of funds investing in a wide range of global bonds, without any constraints in terms of rating, countries, currencies and/or issuer types. The Fund actively manages the currency exposure. A non-exhaustive list of fixed income strategies International Bond is allowed to invest in are money market funds, sovereign bond funds, aggregate bond funds, corporate bonds, convertible bonds, emerging market bonds, total return funds.

The Sub-Fund began the year with a strong change in the asset allocation: after the massive drawdown in 2022 in the bond markets, its duration was increased in the portfolio throughout the first quarter.

<sup>\*</sup> See Note 1 for further details.

#### AZ Fund 1 - AZ Bond - International FoF (continued)

At the beginning of the year the duration in the portfolio was increased with a higher exposure on the 5-year US Treasury through futures and partially closing some short positions on the European curve. After the strong rally in January part of the long exposure was reduced again mainly opening short positions on BTP futures. However, the unexpected wording from the central bankers induced the Sub-Fund manager to reduce the gross exposure in February. During the US banking crisis of SVB the BTP were supposed to better hedge the entire portfolio betting on spread enlargement. This scenario did not take place and the Sub-Fund manager slowly reduced the gross exposure, increasing the duration that at the end of the quarter was close to minus one. The dollar exposure was around 115% at the beginning of the year and it was reduced to 105% at the end of the quarter. During the SVB and Credit Suisse failure the manager decided to drastically reduce any exposure on high yield and emerging debt assuming that in 6 to 9 months any possible financial restriction could lead to recession causing a strong spread enlargement on the asset class.

During the second quarter the long part of the portfolio did not experience any major change. The idea to support this conservative approach was related to the fact that having real rates at the highest level in the last few decades could suddenly cause a deep recession in the months ahead. Therefore, the long part of the portfolio was mainly invested in short term treasuries for around 40%, absolute return strategies for around 15%, short term investment grades for around 20%, money market funds for the remaining part. The duration slightly increased throughout the quarter mainly closing some short positions on BTP and German bund. The main short position still in place was related to the 10 years Japanese government bond, whose negative carry was still manageable being close to zero.

During the third quarter there were different macroeconomic data that could be interpreted as a slowdown in the economy was coming either in the US with a strong discrepancy between GDP and GDI, but also with an even clearer slowdown in Europe and China. The yield curve experienced a strong rise in the long end of the curve from August onwards. At the beginning it was justified with the strength of the US economy supported by a strong job market. On the other hand, it seemed there was selling pressure on the bond markets due to the oversupply generated by a strong fiscal deficit in the USA. Moreover, the end of the negative base effect on inflation caused by the oil price made the financial community think that we could have an unexpected further rise in inflation in the second half of the year. Throughout the quarter the Sub-Fund manager slowly increased the portfolio duration but with a bias on the safer part of the bond spectrum, going long duration on US Treasuries and German Bund and opening short positions on French OAT, Italian BTP, and Japanese Government Bonds. Duration was around 2.1 years but with 6.2 years long duration on US Treasuries and Bund and short on Italian BTP, Japanese JGB, and French OAT for around 4.1 years. Dollar exposure was at around 115% up to the end of September.

The last quarter of the year was characterized, in October, by an increase in volatility due to the geopolitical tension in the Middle East but then, after the FOMC statements, at the beginning of November the bond markets experienced a strong rally. At the end of the year the Fed reassured the markets that we are probably at the pivot and from next year we can experience multiple rate cuts. From November till the end of December the markets discounted 7 rate cuts with a drop in the 10-year treasury yield of around 120 basis points from the peak of October. Duration initially increased up to 5 years, closing short positions on BTP, and buying further exposure on the US curve and German Bund; only at the end of November it was tactically reduced the duration selling treasuries and Bund. In December the duration increased again, raising the exposure on 2,5,10, and 20 years Treasuries and keeping short positions on bund and Japanese 10 years bond. The dollar exposure was drastically reduced from 110% in October to 55% at the end of December. The duration by year end was around 1.8 years.

### AZ Fund 1 - AZ Bond - Mid Yield

The AZ Fund 1 - AZ Bond - Mid Yield AZC EUR returned +4.01% in 2023.

The Sub-Fund underperformed the reference index, where the main reason was the underweight of HY exposure. The Sub-Fund had a preference for financial credit, both in the sub space component and in the IG part. HY was stronger than we expected also thanks to technicals (second straight year of negative net supply) while financials experienced the issues of US regional Banks and CS. We still think financials offer better value than corporates and keep the same positioning for 2024.

Q1 2023: Global Fixed Income markets started 2023 higher on renewed hopes for a slowdown or a turnaround in restrictive monetary policies, and this despite the still intransigent tone used by central banks in their statements. During the months of February and march the US regional banks crisis and the rescue of CS have created a strong feeling of mistrust towards the European banking system. The strategy was affected by the sell off on our European AT1 holdings (worst asset class in March). The market severely penalized also IG financials securities, with spreads widening three times compared to the IG corporate sector. The Sub-Fund had approximately half of the portfolio invested in financials and decided to reduce the exposure to AT1s (from 15 to 9% of the NAV). In particular, the direct exposure to the more "beta" European banks (DB, SG and Barclays) was reduced in favor of more defensive players with less "leverage" on CRE and Investment Banking. The strategy extended the duration to 5.5 years, maintaining the average rating of BBB-. The portfolio's yield to maturity was 7.4%

Q2 2023: during the second quarter the dominant themes were the debt ceiling negotiation and the regional bank crisis debate, both "US centric" risks. Subordinated debt started its recovery. At the MACRO level a very supportive labour markets, resilient consumers and, still, sticky inflation in its core component (both in the US and EU) have triggered a renewed hawkish rhetoric from central banks. The yields of government bonds of developed countries have risen. The Sub-Fund had an average rating of BBB, a duration of 5.5 years and YTM of 6.2%.

#### AZ Fund 1 - AZ Bond - Mid Yield (continued)

Q3 2023: The third quarter saw the US economy remaining robust, with Q2 23 GDP growth revised upwards, eliminating the risk of a near-term recession. A combination of favourable factors has given further impetus to risky assets, driven by "US exceptionalism. Corporate earnings were reassuring. The month of August started with the downgrade of The US government's credit rating by Fitch, from the top level of AAA to a notch lower at AA+. Fitch said it had noted a "steady deterioration" in governance over the last 20 years. This event fuelled the Bearish momentum in US rates, while European rates barely moved in the month. US data revision (upwards) were pushing spreads lower especially in US HY and US IG markets. Jackson Hole turned out to be a non-event event. On the macroeconomic front In September the Federal Reserve revised upwards its US growth estimate for 2023 to +2.1% (from +1%), kept rates unchanged at 5.25% - 5.5%. The 'dot plot' was however more restrictive. We keep our defensive stance in HY confirming our financial vs corporate overweight. The strategy held a duration of 4 years, a composite rating of BBB and YTM of 6%.

Q4 2023 In October, geopolitical risk returned to the center of attention due to tensions between Israel and Gaza, tensions that quickly escalated into conflict. The ECB left monetary policy unchanged after ten consecutive increases, highlighting how rates are at sufficiently restrictive levels. The restrictive monetary policy continued to spread throughout the economy with more incisiveness than expected, as confirmed by the European PMI data, in contraction. At the beginning of November, the Fed board left rates unchanged in the range of 5.25%-5.5%. The US labour market was gradually slowing down with the unemployment rate for the month of October at 3.9% (vs 3.8%). Also NFPs recorded a smaller increase than operators' expectations with 150k jobs created compared to 180k expected. Finally, all the data relating to inflation (CPI, PPI and PCE Deflator) confirmed the continuation of the existing disinflationary trend. In Europe overall Euro area inflation fell 49 basis points in November to 2.41%, well below expectations. The growth dynamics imply the continuation of the disinflation process, the slowdown in employment and should allow the Fed to start cutting rates from June 2024. Also the ECB will start cutting rates next June. For the UK, the environment will remain stagflationary, with lower odds of BoE intervention. The Sub-Fund started the quarter with a duration of approximately 2 years and then extend it from mid-October to 6.5 years, an average rating of BBB and a YTM of approximately 6%.

### AZ Fund 1 - AZ Bond - Negative Duration

In 2023, the AZ Fund 1 - AZ Bond - Negative Duration Sub-Fund recorded a positive performance of +4.87% (class A ACC). The duration exposure of the fund has been increased to the upper end in the first few months of the year and this has prevented the fund from suffering the fall in global yields. At the same time the corporate bond portfolio and the short exposure to Japanese Government bonds has benefitted the fund. The exposure to currencies other than the EUR has been minimal, in line with the strategy of the fund. From a geographical standpoint the Sub-Fund underweighted Japanese Government bond markets in favor of US Treasuries. Going into 2024 the short duration is expected to remain minimal as yields are expected to be stable or falling.

### AZ Fund 1 - AZ Bond - Patriot

2023, a year with a thousand faces but which finally began to return satisfaction, after the nightmare of 2022 with unprecedented losses for the bond world. The elements that punctuated the year were 1) the failure of some American banks and the incorporation of Credit Suisse into UBS in March, 2) the surprising strength of growth dynamics and of the labor market in the United States in the middle phase, with the widespread feeling of having to deal with higher rates for longer, 3) stronger signs of disinflation during the last quarter, from core inflation in the United States to various measures of inflation in Europe and the rest of the world, which led to 4) the Fed's sort-of-pivot at the end of the year, fueling the sharp decline in yields and an incredible recovery in bonds with spectacular performances in November - the best month in history - and December.

Bond yields for the year, however, remained almost unchanged in the United States, while they fell in Europe, with inflation declining but still substantial. Credit spreads have also fallen, with emphasis in the speculative world, despite a generalized increase in the default rate globally. The decline in volatility and the performance of equities (MSCI World in US dollars +24.4%, SPX +26.2%, Eurostoxx50 +23.2%) have certainly contributed to this constructive environment for High Yield. Credit returns were generally positive: IG US +8.4%, HY US +13.4%, IG EU +8.0%, HY EU +12%, Emerging +10.3%, global aggregate bonds +4.2%. Italian government bonds also performed well, +12.0% on maturities over 5 years, with spreads on the German curve shrinking (from 215 to 165 basis points).

A particularly complicated economic and financial environment remains, with many variables that will continue to impact the scenario, including geopolitics; For the time being, however, a significant return of volatility seems to be excluded. The downward path of inflation seems to be able to extend to 2024, while growth, albeit weakening, should remain positive. Central banks have room to adjust monetary policy while continuing to reabsorb liquidity, albeit in an environment where new issuance by governments could be higher than seen in recent years.

In 2023, the Sub-Fund recorded a positive performance, +8.5% (class A ACC), benefiting from both Italian government bonds and corporate positions, and despite the negative contribution of derivative positions aimed at shaping overall duration exposure. The duration of the portfolio has continued to rise, culminating around the current 10.8, given that the consistent flow of subscriptions that began in the middle of the year has been concentrated mainly on BTPS with a maturity of more than 10, and with particular emphasis on those above 20: a very positively sloping curve like the Italian one was and is hard to find globally and the achievement of absolute levels of yields above 5% has been considered a very interesting time to take positions on very long-dated securities to the extreme. Duration, including derivatives, has risen progressively from less than 2 years to 8.8 years today. The use of derivatives is functional to reducing the overall exposure to duration, focusing on both the German curve and the Italian short-dated future, the latter sold to replicate the "flattening" strategy, i.e. the possibility that the differential between long-term and short-term yields will narrow. The strengthening of positions in government bonds has led to the dilution of corporate bonds, which currently account for around 35% of assets (13% IG and 22% HY).

The structure, given the context, seems more justified than ever: the flow of proceeds from the Recovery Fund and the renewed interest of investors in bond yields create an important support in the medium term also for Italian government bonds, despite the end of the ECB's reinvestment of maturities. At the same time, however, the government's debt volume continues to grow, and prospective deficits will contribute to increasing it, with the risk of rekindling fears about its sustainability. Hence the strategy also based on protection positions on short maturities.

### AZ Fund 1 - AZ Bond - Real Plus

The year 2024 begins with optimistic prospects for the performance of Brazilian assets, despite the still quite challenging scenario.

In Brazil, the ongoing inflation decline allows the Central Bank to maintain the interest rate cut cycle, economic activity remains resilient, and external accounts continue healthy, indicating a positive structural change.

In developed countries, we already see conditions for the beginning of the interest rate reduction process. The main risks mapped are the American elections, intensification of geopolitical conflicts, and the addressing of the challenging fiscal agenda.

Despite facing uncertainties, challenges, and market volatility, the Sub-Fund delivered an impressive performance in 2023, with a return of 19.59% in EUR. This achievement can be primarily attributed to Carry Trade, which contributed +11.1%. Additionally, tactical position in Interest Rates also played a significant role, generating 5.4%. The fund's FX cross-hedge strategy proved effective in 2023, with the Brazilian Real (BRL) gaining 4.2% while EUR saw a modest decline of just 0.45%.

#### AZ Fund 1 - AZ Bond - Renminbi Fixed Income

In 2023, the Sub-Fund returned -4% (EUR-hedged institutional class), due to the 2.84% depreciation in CNH and the aggressive Fed hike that resulted in the sell-off in USD bonds in 2023.

The PBOC has announced an adjustment to the CFETS RMB Index which will lower the weightings of the USD and EUR while increasing the weighting of other currencies. This theoretically has been done to better reflect China's trade weightings (which has seen a relative increase in ex-Euro/US trade in 2023), but also allows the PBOC to manage the USDCNY with greater flexibility - which also will likely mean greater volatility of the RMB vs the USD going forward.

With export growth likely bottoming out at the end of the year and the USD-CNY interest rate differential also bottoming out, we think the downward pressure for the RMB remains contained in 2024. A slight rebound in manufacturing activity as seen in PMIs and industrial profits, likely also shows a bottoming out in economic momentum.

In 2024, we expect USD bonds in the portfolio with a much higher yield to contribute to performance. The market expected Fed to cut interest rate in 2024 with the inflation being tamed. This will benefit USD bonds.

We remain cautious over high yield bonds as they are likely to underperform during a slowing US economy. In 2024, the bond portfolio will benefit from a possible Fed cut in interest rate. We believe there are value in China bonds, given the wider spread. We will increase our exposure to USD bonds with the higher yield. Meanwhile, we will also extend duration for the USD bonds.

The Sub-Fund's current yield is 10.6%. The portfolio is currently mostly in investment grade exposure with a duration of 1.8 years.

## AZ Fund 1 - AZ Bond - Renminbi Opportunities

In 2023, the Sub-Fund performance was -6.19% (EUR-hedged institutional class) while the CNH depreciated 2.84% against the USD.

The PBOC has announced an adjustment to the CFETS RMB Index which will lower the weightings of the USD and EUR while increasing the weighting of other currencies. This theoretically has been done to better reflect China's trade weightings (which has seen a relative increase in ex-Euro/US trade in 2023), but also allows the PBOC to manage the USD-CNY with greater flexibility - which also will likely mean greater volatility of the RMB vs the USD going forward.

With export growth likely bottoming out at the end of the year and the USD-CNY interest rate differential also bottoming out, we think the downward pressure for the RMB remains contained in 2024. A slight rebound in manufacturing activity as seen in PMIs and industrial profits, likely also shows a bottoming out in economic momentum.

The Sub-Fund's current yield is 3.32%. The portfolio is currently virtually all in investment grade exposure with a duration of 0.91 years.

### AZ Fund 1 - AZ Bond - Short Term Global High Yield FoF

For the calendar year 2023 the primary unit class (A-AZ Fund) of AZ Fund 1 - AZ Bond - Short Term Global High Yield FoF had a performance of +4.46%.

The strategy of the fund is focused on High Yield short term Funds.

AZ Fund 1 - Short Term Global High Yield FoF is a fully directional fund therefore active management is limited due to the nature of the product, that has a focus on a single asset class and with a directional mandate.

During the first part of the year there was a continued increase in exposure to Asian high yield, a position that had begun to build since November 2022. At the end of February, the emerging debt component was 25 percent, including about 20 percent purely Asian funds and about a 5 percent global emerging funds with a focus on short duration.

#### AZ Fund 1 - AZ Bond - Short Term Global High Yield FoF (continued)

The Silicon Valley bank crisis of March 2023 resulted in a willingness to disrupt the portfolio composition. On the 10th of the month, the day the Silicon Valley Bank problem emerged, the short duration position on US rates was completely closed. A bank liquidity crisis would almost certainly have led to a decline in rates, which in fact happened vehemently in the days that followed. The credit risk in the portfolio was also further reduced. The sudden rise in rates in America and the rest of the world is causing the first major problems to surface in the credit world, which in this case emerged as a bank liquidity crisis. Certainly, the stricter approach of the regulator, increased liquidity requirements, and increased risk aversion in the provision of credit by financial institutions may have a negative effect on the high yield world, that is, the riskier spectrum in the credit world. For this reason, exposure to high yield credit has been minimized to 72 percent at the end of March.

The share of emerging debt, which weighed less than 5 percent at the end of March, was also reduced.

The share of a fund with a total return approach, which had very limited exposure to credit and an abundant share of cash, was raised, also in March, from 8% to 15%. Two funds that have exposure to the US currency curve were also added, also in March, which combined weighed nearly 4 percent of the portfolio.

During April, the share of funds on emerging debt was completely zeroed out, going to further reduce the risk in the portfolio. a share of high yield funds on European curve was also inserted for about 5 percent, going to hedge the currency against the dollar.

The positioning of the portfolio was kept almost unchanged until December, the month in which the pure credit exposure in the portfolio was again increased. In fact, it was decided to take advantage of the strength in the credit world resulting from the words of central bank governors, who between November and December stated that they were satisfied with the trajectory of inflation data and therefore hinted that the rate hike cycle had come to an end.

The portfolio at the end of December was 90 percent invested in the High Yield asset class, zeroed out aggregate total return exposures, which weighed about 15 percent, and 4 percent aggregate short-term positions exposed to the US curve. A position of about 3% to Asian High Yield was also reinstated.

### AZ Fund 1 - AZ Bond - Sustainable Hybrid

2023, a year with a thousand faces but which finally began to return satisfaction, after the nightmare of 2022 with unprecedented losses for the bond world. The elements that punctuated the year were 1) the failure of some American banks and the incorporation of Credit Suisse into UBS in March, 2) the surprising strength of growth dynamics and of the labor market in the United States in the middle phase, with the widespread feeling of having to deal with higher rates for longer, 3) stronger signs of disinflation during the last quarter, from core inflation in the United States to various measures of inflation in Europe and the rest of the world, which led to 4) the Fed's sort-of-pivot at the end of the year, fueling the sharp decline in yields and an incredible recovery in bonds with spectacular performances in November - the best month in history - and December.

Bond yields for the year, however, remained almost unchanged in the United States, while they fell in Europe, with inflation declining but still substantial. Credit spreads have also fallen, with emphasis in the speculative world, despite a generalized increase in the default rate globally. The decline in volatility and the performance of equities (MSCI World in US dollars +24.4%, SPX +26.2%, Eurostoxx50 +23.2%) have certainly contributed to this constructive environment for High Yield. Credit returns were generally positive: IG US +8.4%, HY US +13.4%, IG EU +8.0%, HY EU +12%, Emerging +10.3%, global aggregate bonds +4.2%. Italian government bonds also performed well, +12.0% on maturities over 5 years, with spreads on the German curve shrinking (from 215 to 165 basis points).

A particularly complicated economic and financial environment remains, with many variables that will continue to impact the scenario, including geopolitics; For the time being, however, a significant return of volatility seems to be excluded. The downward path of inflation seems to be able to extend to 2024, while growth, albeit weakening, should remain positive. Central banks have room to adjust monetary policy while continuing to reabsorb liquidity, albeit in an environment where new issuance by governments could be higher than seen in recent years.

In 2023, the Sub-Fund posted a positive performance, +7.8% (class A ACC), thanks to the generalized strength of subordinated securities and despite the marginally negative contribution of derivative positions aimed at shaping duration exposure, which with the rally in the last two months have effectively reduced the negativity accumulated in the rest of the year. The securities portfolio has always had a duration of more than 3.5 years, while the duration including derivatives has been very actively managed, starting from conservative positions and increasing it even beyond 5 years in the second half of the year in conjunction with the rise in rates: the aim was to provide the portfolio with an additional instrument to benefit from the potential reduction in government yields in a context in which inflation is progressively falling. The gross yield settled at just over 6% at the end of the year, after touching around 7.5% in October. Activity during the year focused 1) on the management of cash flows, which tended to be inflows, and 2) on the use of the primary market to continuously improve the profile of the portfolio, with newly issued securities representing more than 25% of assets. The merger by absorption of AZ Fund 1 - AZ Bond - Hybrids in October did not require any changes, given the very similar portfolios and duration. At the strategic level, there have been no significant changes, the portfolio has always remained structured with about 40%-50% in corporate hybrids and the remainder in subordinated financials, with no meaningful currency exposure. Within the latter, CoCos have been gradually increased to over 19%, with the maximum threshold set by the investment policy at 20%.

The current approach is confirmed, from a medium-term perspective: the fundamentals of the corporate world are solid and allow issuers to face a slowdown in global growth without fears. Valuations are also attractive, especially on subordinated securities, both in terms of absolute bond yields and credit spread levels, which are already partly pricing in a deterioration in the macroeconomic environment.

#### AZ Fund 1 - AZ Bond - Target 2023\*

2023, a year with a thousand faces but which finally began to return satisfaction, after the nightmare of 2022 with unprecedented losses for the bond world. The elements that punctuated the year were 1) the failure of some American banks and the incorporation of Credit Suisse into UBS in March, 2) the surprising strength of growth dynamics and of the labor market in the United States in the middle phase, with the widespread feeling of having to deal with higher rates for longer, 3) stronger signs of disinflation during the last quarter, from core inflation in the United States to various measures of inflation in Europe and the rest of the world, which led to 4) the Fed's sort-of-pivot at the end of the year, fueling the sharp decline in yields and an incredible recovery in bonds with spectacular performances in November - the best month in history - and December.

Bond yields for the year, however, remained almost unchanged in the United States, while they fell in Europe, with inflation declining but still substantial. Credit spreads have also fallen, with emphasis in the speculative world, despite a generalized increase in the default rate globally. The decline in volatility and the performance of equities (MSCI World in US dollars +24.4%, SPX +26.2%, Eurostoxx50 +23.2%) have certainly contributed to this constructive environment for High Yield. Credit returns were generally positive: IG US +8.4%, HY US +13.4%, IG EU +8.0%, HY EU +12%, Emerging +10.3%, global aggregate bonds +4.2%. Italian government bonds also performed well, +12.0% on maturities over 5 years, with spreads on the German curve shrinking (from 215 to 165 basis points).

A particularly complicated economic and financial environment remains, with many variables that will continue to impact the scenario, including geopolitics; For the time being, however, a significant return of volatility seems to be excluded. The downward path of inflation seems to be able to extend to 2024, while growth, albeit weakening, should remain positive. Central banks have room to adjust monetary policy while continuing to reabsorb liquidity, albeit in an environment where new issuance by governments could be higher than seen in recent years.

In 2023, the Sub-Fund recorded a very positive performance, +6.0% (class A ACC), thanks to the generalized strength of the credit world, especially at the level of corporate hybrids and subordinated financials, including on short-term securities. Duration continued to decline gradually, until the absorption into the Sub-Fund at the end of November. The portfolio remained structured with more than 30% of both Investment Grade and High Yield (main categories: corporate hybrids and subordinated financials, both above 25%), and percentages of less than 10% among others in emerging and convertibles. Activity during the year focused on 1) the management of outflows, 2) in the middle of the year on the rebalancing of the portfolio from a more defensive perspective, reducing the credit components in favor of very short-term government bonds, and 3) in the weeks leading up to the merger into Az Fund 1 - AZ Bond - Target 2026, on the adjustment of the portfolio to the new time profile.

#### AZ Fund 1 - AZ Bond - Target 2024

2023, a year with a thousand faces but which finally began to return satisfaction, after the nightmare of 2022 with unprecedented losses for the bond world. The elements that punctuated the year were 1) the failure of some American banks and the incorporation of Credit Suisse into UBS in March, 2) the surprising strength of growth dynamics and of the labor market in the United States in the middle phase, with the widespread feeling of having to deal with higher rates for longer, 3) stronger signs of disinflation during the last quarter, from core inflation in the United States to various measures of inflation in Europe and the rest of the world, which led to 4) the Fed's sort-of-pivot at the end of the year, fueling the sharp decline in yields and an incredible recovery in bonds with spectacular performances in November - the best month in history - and December.

Bond yields for the year, however, remained almost unchanged in the United States, while they fell in Europe, with inflation declining but still substantial. Credit spreads have also fallen, with emphasis in the speculative world, despite a generalized increase in the default rate globally. The decline in volatility and the performance of equities (MSCI World in US dollars +24.4%, SPX +26.2%, Eurostoxx50 +23.2%) have certainly contributed to this constructive environment for High Yield. Credit returns were generally positive: IG US +8.4%, HY US +13.4%, IG EU +8.0%, HY EU +12%, Emerging +10.3%, global aggregate bonds +4.2%. Italian government bonds also performed well, +12.0% on maturities over 5 years, with spreads on the German curve shrinking (from 215 to 165 basis points).

A particularly complicated economic and financial environment remains, with many variables that will continue to impact the scenario, including geopolitics; For the time being, however, a significant return of volatility seems to be excluded. The downward path of inflation seems to be able to extend to 2024, while growth, albeit weakening, should remain positive. Central banks have room to adjust monetary policy while continuing to reabsorb liquidity, albeit in an environment where new issuance by governments could be higher than seen in recent years.

In 2023, the Sub-Fund recorded a very positive performance, +6.6% (class A ACC), thanks to the generalized strength of the credit world, especially at the level of subordinated and emerging securities. Duration has continued to gradually decline to the current 0.8 years, and the gross yield is close to 4.9% (annualized). Activity during the year focused on the management of outflows and the progressive rebalancing of defensive positions as the deadline approached, with the introduction of a component of short-term government bonds. The rest of the portfolio has always been structured with around 50%/60% between corporate hybrids and subordinated financials, and much smaller percentages among others in emerging and convertible bonds, with no meaningful currency exposure. With few months left before reaching the time horizon (06/2024), with the portfolio well aligned with the maturity, the existing positions are confirmed: the fundamentals of the corporate world are solid and allow issuers to face a slowdown in global growth without fears. Valuations are also attractive, both for absolute bond yields and for credit spread levels, which are already partly pricing in a deteriorating macroeconomic environment.

<sup>\*</sup> See Note 1 for further details.

#### AZ Fund 1 - AZ Bond - Target 2024 USD

2023 was a volatile year for financial markets, that continued to be mainly driven by inflation dynamics and Central Banks' monetary policy measures.

After a positive start to the year, driven by easing inflationary pressures and an overall improvement in the economic outlook, the collapse of Californian lender SVB delivered the first setback, temporarily shifting the markets' focus from inflation to financial stability and causing a contagion effect to other financial institutions across the Atlantic. The situation was contained by the prompt intervention of the Fed, that managed to preserve the depositors by instituting the Bank Term Funding Program (BTFP), a facility designed to provide additional funding to financial institutions. Moreover, several consolidation initiatives were promoted, both in Europe and in the US, with the notable case of the takeover of Credit Suisse by UBS, that led to the complete write-down of the Swiss lender's AT1 bonds.

Despite the financial stability concerns, Fed and ECB stayed the course and continued delivering further hikes until July and September, respectively. Overall, their tone remained cautious, but the tilt swinged between hawkish and dovish across the spring/summer months - tracing inflation and labor market data - and caused some volatility in the mid months of the year.

Central Bankers' tone took a decisive hawkish tilt in the autumn, when the narrative shifted from additional hikes to the length of the tightening period. This higher-for-longer rhetoric, combined with persistently higher sovereign deficit levels - particularly in the US -, brought about debt sustainability concerns and triggered a large bear steepening move on yield curves, leading to significant losses across maturities and the long end in particular.

This trend saw a sharp reversal from the beginning of November, when financial markets experienced the largest 2-months rally in the post-COVID period. The rally was propelled in November by the US Treasury Quarterly Refunding Announcement, which delivered a recalibration of the issuance profile less skewed toward longer maturities, combined with an explicit communication of a flexible approach aimed at containing excessive volatility in the Treasury market. Dovish comments from several Central Bank officials - Waller and Powell in primis - threw fuel to the fire, as well as lower than expected inflation readings on both sides of the Atlantic.

The Sub-Fund recorded a positive performance during the year, keeping a low volatility profile throughout the course of the year, as a result of the low duration exposure of its credit portfolio.

The investment management team repeatedly optimized the structure of the portfolio during the year, aiming at fine tuning the risk/ profile of the Sub-Fund according to market conditions and opportunities.

Overall, throughout the year the investment team left the core structure of the portfolio roughly unchanged, making limited use of derivative exposure and recalibrating the overall portfolio composition towards a somewhat safer mix as the year went along.

The Sub-Fund closed the year with a NAV/unit of USD 5.293 and a yearly performance of 9.27%.

### AZ Fund 1 - AZ Bond - Target 2025

2023, a year with a thousand faces but which finally began to return satisfaction, after the nightmare of 2022 with unprecedented losses for the bond world. The elements that punctuated the year were 1) the failure of some American banks and the incorporation of Credit Suisse into UBS in March, 2) the surprising strength of growth dynamics and of the labor market in the United States in the middle phase, with the widespread feeling of having to deal with higher rates for longer, 3) stronger signs of disinflation during the last quarter, from core inflation in the United States to various measures of inflation in Europe and the rest of the world, which led to 4) the Fed's sort-of-pivot at the end of the year, fueling the sharp decline in yields and an incredible recovery in bonds with spectacular performances in November - the best month in history - and December.

Bond yields for the year, however, remained almost unchanged in the United States, while they fell in Europe, with inflation declining but still substantial. Credit spreads have also fallen, with emphasis in the speculative world, despite a generalized increase in the default rate globally. The decline in volatility and the performance of equities (MSCI World in US dollars +24.4%, SPX +26.2%, Eurostoxx50 +23.2%) have certainly contributed to this constructive environment for High Yield. Credit returns were generally positive: IG US +8.4%, HY US +13.4%, IG EU +8.0%, HY EU +12%, Emerging +10.3%, global aggregate bonds +4.2%. Italian government bonds also performed well, +12.0% on maturities over 5 years, with spreads on the German curve shrinking (from 215 to 165 basis points).

A particularly complicated economic and financial environment remains, with many variables that will continue to impact the scenario, including geopolitics; For the time being, however, a significant return of volatility seems to be excluded. The downward path of inflation seems to be able to extend to 2024, while growth, albeit weakening, should remain positive. Central banks have room to adjust monetary policy while continuing to reabsorb liquidity, albeit in an environment where new issuance by governments could be higher than seen in recent years.

The Sub-Fund launched in 2020 and closed to subscriptions at the beginning of 2023. In 2023, the Sub-Fund recorded a very positive performance, +7.7% (class A ACC), thanks to the generalized strength of the credit world, especially at the level of subordinated and emerging securities. Duration has continued to gradually decline to the current 2.6 years (2.5 years duration including derivatives) and the gross yield is close to 6.2%. Activity during the year focused 1) on the management of outflows, 2) on the primary market, with newly issued securities that currently account for approximately 17% of assets, and 3) on a gradual rebalancing in the second half of the year to bring the portfolio closer to the expected maturity. At the strategic level, there have been no significant changes, the Fund remains focused on corporate hybrids and subordinated financials, and residual percentages among others in emerging and convertible bonds, with no meaningful currency exposure. The current approach is confirmed, with a view to maintaining positions with a time horizon of 12/2025: the fundamentals of the corporate world are solid and allow issuers to face a slowdown in global growth without fears. Valuations are also attractive, both for absolute bond yields and for credit spread levels, which are already partly pricing in a deteriorating macroeconomic environment.

#### AZ Fund 1 - AZ Bond -Target 2026\*

2023, a year with a thousand faces but which finally began to return satisfaction, after the nightmare of 2022 with unprecedented losses for the bond world. The elements that punctuated the year were 1) the failure of some American banks and the incorporation of Credit Suisse into UBS in March, 2) the surprising strength of growth dynamics and of the labor market in the United States in the middle phase, with the widespread feeling of having to deal with higher rates for longer, 3) stronger signs of disinflation during the last quarter, from core inflation in the United States to various measures of inflation in Europe and the rest of the world, which led to 4) the Fed's sort-of-pivot at the end of the year, fueling the sharp decline in yields and an incredible recovery in bonds with spectacular performances in November - the best month in history - and December.

Credit returns were generally positive: IG US +8.4%, HY US +13.4%, IG EU +8.0%, HY EU +12%, Emerging +10.3%, global aggregate bonds +4.2%. Italian government bonds also performed well, +12.0% on maturities over 5 years, with spreads on the German curve shrinking (from 215 to 165 basis points).

A particularly complicated economic and financial environment remains, with many variables that will continue to impact the scenario, including geopolitics; For the time being, however, a significant return of volatility seems to be excluded. The downward path of inflation seems to be able to extend to 2024, while growth, albeit weakening, should remain positive. Central banks have room to adjust monetary policy while continuing to reabsorb liquidity, albeit in an environment where new issuance by governments could be higher than seen in recent years.

In 2023, the the Sub-Fund, launched at the beginning of the year, recorded a positive performance, +4.1% (class A ACC), thanks to the generalized strength of the credit world, especially at the level of subordinated and emerging securities. The construction of the portfolio, with constant and consistent inflows, saw the use of the primary market for only about 20%, while for the most part it was necessary to source from the secondary market. Duration has declined, albeit marginally, to 3 years, in line with the time horizon, and the gross yield is close to 6.0%. Activity during the year focused 1) on the management of inflows, and 2) on the increase of CoCos to the maximum possible limit during November. The Sub-Fund is structured with substantial percentages in corporate hybrids and subordinated financials, of which almost 20% in CoCos, and residual percentages among others in emerging and convertible bonds. The current approach is confirmed, with a view to maintaining positions with a time horizon of 12/2026: the fundamentals of the corporate world are solid and allow issuers to face a slowdown in global growth without fears. Valuations are also attractive, both for absolute bond yields and for credit spread levels, which are already partly pricing in a deteriorating macroeconomic environment. During the month of December, part of the subscriptions was kept as cash (approximately 5%), to be used on the primary flow expected at the beginning of January 2024.

## AZ Fund 1 - AZ Bond - US Dollar Aggregate

2023 was a volatile year for financial markets, that continued to be mainly driven by inflation dynamics and Central Banks' monetary policy measures.

After a positive start to the year, driven by easing inflationary pressures and an overall improvement in the economic outlook, the collapse of Californian lender SVB delivered the first setback, temporarily shifting the markets' focus from inflation to financial stability and causing a contagion effect to other financial institutions across the Atlantic. The situation was contained by the prompt intervention of the Fed, that managed to preserve the depositors by instituting the Bank Term Funding Program (BTFP), a facility designed to provide additional funding to financial institutions. Moreover, several consolidation initiatives were promoted, both in Europe and in the US, with the notable case of the takeover of Credit Suisse by UBS, that led to the complete write-down of the Swiss lender's AT1 bonds.

Despite the financial stability concerns, Fed and ECB stayed the course and continued delivering further hikes until July and September, respectively. Overall, their tone remained cautious, but the tilt swinged between hawkish and dovish across the spring/summer months - tracing inflation and labor market data - and caused some volatility in the mid months of the year.

Central Bankers' tone took a decisive hawkish tilt in the autumn, when the narrative shifted from additional hikes to the length of the tightening period. This higher-for-longer rhetoric, combined with persistently higher sovereign deficit levels - particularly in the US -, brought about debt sustainability concerns and triggered a large bear steepening move on yield curves, leading to significant losses across maturities and the long end in particular.

The Sub-Fund experienced substantial inflows between the latter end of Q3 and the first half of Q4, that the investment management team promptly invested in issues with maturities in line with the duration profile of the Sub-Fund. Moreover, as US government yields were rising, the manager added to the duration exposure of the Sub-Fund investing in US treasuries across the maturity spectrum.

This trend saw a sharp reversal from the beginning of November, when financial markets experienced the largest 2-months rally in the post-COVID period. The rally was propelled in November by the US Treasury Quarterly Refunding Announcement, which delivered a recalibration of the issuance profile less skewed toward longer maturities, combined with an explicit communication of a flexible approach aimed at containing excessive volatility in the Treasury market. Dovish comments from several Central Bank officials - Waller and Powell in primis - threw fuel to the fire, as well as lower than expected inflation readings on both sides of the Atlantic.

During this phase, the investment management team leveraged the primary market to invest the cash resulting from new subscriptions on issues with attractive risk/reward profile and a duration in line with the Sub-Fund's, maintaining a safe profile for the overall composition of the Sub-Fund.

The Sub-Fund recorded a positive performance during the year, largely benefiting from the year-end rally thanks to its duration profile.

The Sub-Fund closed the year with a NAV/unit of USD 5.024 and a yearly performance of 4.58%.

<sup>\*</sup> See Note 1 for further details.

#### AZ Fund 1 - AZ Bond - US Municipal\*

The Sub-Fund performance during the 2023 (until the end of September, when it was merged into AZ Fund 1 - AZ Bond - US Dollar aggregate) was -1.43% for EUR units. The total Sub-Fund exposure to the underlying asset class was close to 95% during all the year. The bonds portfolio was quite stable, being invested in high quality municipalities like universities and hospitals. The duration exposure was managed dynamically over the reference period using options and/or futures on 2 years/5 years/10 years treasury bonds. In terms of duration, it was dynamically managed in a range between 5 and 7 years, the average rating was AA-.

### AZ Fund 1 - AZ Bond - USD Aggregate Short Term

In 2023, the AZ Fund 1 - AZ Bond - USD Aggregate Short Term Sub-Fund recorded a negative performance of -1.41% (in EUR terms, class A ACC). The fall in the US dollar had a negative impact on the return which more than counterbalanced the positive contribution of the carry of the bond portfolio. Treasuries yields ended the year unchanged from the year before. The duration has been between 2 and 3 for most of the year. The portfolio was made up mainly of short duration Treasury bonds and therefore was characterized by a low sensitivity to interest rates. The exposure to currencies other than the US dollar has been minimal, in line with the strategy of the Sub-Fund. Going into 2024 no major changes in the allocation are expected, in line with the objective to give a performance in line with the performance of the USD vs the EUR.

### AZ Fund 1 - AZ Bond - USD Corporate

In 2023, the performance of the Sub-Fund was +3.88%.

The year started well for fixed income markets, with China reopening and the easing of the European energy crisis leading to increased risk appetite; as a consequence in January both Treasury yields and credit spreads decreased and the Sub-Fund generated a +1.98% performance. In February inflation data was surprisingly high and therefore rates rose again. During these two months, the Sub-Fund rebalanced its exposure to rate duration, increasing it substantially in order to get more aligned to the reference index (from 3.86 at the end of December to 6.67 at the end of February).

In March *side-effects* of the rapid rate hikes started showing up, with the crisis of Silicon Valley Bank in the US and Credit Suisse in Europe. The Fed reacted by providing liquidity to the financial system, and markets started discounting a less aggressive stance by central banks; as a consequence, Treasury yields dropped, but at the same time credit spreads increased sharply. During the month, the Sub-Fund kept increasing its rate duration through investments in long term treasuries and increased it overall credit quality.

In April the earnings season was generally solid, with companies often beating estimates, while in May the Fed increased rates again to 5.25%. In June central banks took a pause and did not raise rates (also because of a strong US labour market). However, they also signalled that further rate hikes were on the table, and yields rose again.

In July - despite PMIs anticipating a slowdown in the economy - both the Fed and the ECB raised rates again, while in August inflation confirmed its downward trajectory. Rate duration was rebalanced by adding exposure on the very long. In September the Fed left its benchmark interest rate unchanged and it also materially improved its growth expectations, triggering a bear steepening. In October, US GDP growth came out stronger than expected at 4.9% QoQ.

In this environment the market started getting worried about the increasing pile of US debt at a time in which rates remained high, and the *term* premium on the US curve rose. This led to the 10Y Treasury rate surpassing the 5% level on 23 October. The Sub-Fund suffered because of the rates increase and recorded a -3.14% performance in September, followed by -1.59% in October.

Then in November there was a complete U-turn in central banks' tones and the market's mood drastically changed. US inflation data came out lower than expected and Fed pivot expectations grew. The market started to price cuts in 2024 and rates dropped materially (for example, the 10Y Treasury rate ended the month at 4.33%), just like credit spreads. Finally, in December the disinflationary trend was confirmed by the latest US PCE deflator (2.6% YoY). In the last Fed meeting of the year, Fed officials delivered a dovish message and expected to cut rates 3 times during 2024 given their lower inflation forecasts. However, the market was even more aggressive than that and priced between 6 and 7 rate cuts by the Fed by the end of 2024. As a consequence, yields kept decreasing and the 10Y Treasury rate closed the year at 3.88%. The last two months generated an excellent performance (+4.72% and +3.86% respectively) and allowed the Sub-Fund to close the year at +3.88%.

In general, during the year short term yields on the Treasury curve decreased while longer term ones were stable or marginally increased. In particular, yields moved by -18 bps, -16 bps, 0 bps and +7 bps on the 2-, 5-, 10- and 30-year maturities respectively. Over the same period, the Treasury underperformed the Bund, with its spread widening by almost +55 bps on the 10-year maturity (Treasury yield was stable while Bund tightened by -55 bps).

As for credit spreads, over the course of the year there was an overall tightening, with American Corporate IG spreads passing from 142 to 106 bps (-36) and HY from 480 to 385 (-95), even though there was clearly some volatility in between (for example, at the height of the SVB crisis in March HY spreads reached a maximum of 540 bps).

The Sub-Fund closed the year with a defensive positioning; credit quality is higher compared to the reference benchmark, thanks to an overweight position on US Treasuries. As a matter of fact, we believe that Corporate IG spreads are too tight, especially for BBB-rated issuers. If a credit event had to materialize, spreads would widen materially and Treasuries would perform well, thus leading to overperformance.

<sup>\*</sup> See Note 1 for further details.

### AZ Fund 1 - AZ Equity - AL MAL MENA

AZ Fund 1 - AZ Equity - Al Mal MENA is a feeder fund of AZ Fund 3 - Al Mal MENA Equity (the "master fund"). The following commentary is a review of the performance of the master fund:

Although it was a non-consensus call, 2023 was a year of relief for global equities backed by better-than-expected economic activity, sharp inflation normalization, and the high hopes that Fed rate cuts start as early as March 2024. While the strong performance for global equities, especially in the US, was spearheaded by the Technology sector and the Magnificent 7, the breadth of the gains remarkably improved towards year end in line with the Fed dovish shift. The MSCI ACWI rallied 20% almost matching the 2023 decline. On the other hand, the MSCI EMs gains came at 7%, somehow capped by the shaky performance of Chinese equities.

MENA markets had a positive 2023 as well. The S&P Pan Arab Index ended the year up 10% outperforming emerging markets despite a very challenging year for region. Interest rates continued to be high despite the inflation normalization. Oil prices declined by 10% dragged down by higher non-OPEC supply and a weaker than expected demand recovery. Furthermore, the region witnessed severe geopolitical tensions during the 4th quarter with Israel's war in Gaza undermining stability and trading.

That said, the market has successfully maintained its shock absorbers putting more emphasis on both the non-Oil growth theme, with regional economies diversification plans accelerating, and on the Federal Reserve's outlook given the monetary policy peg. On a country level, Dubai market led the table surging 22% with Tourism and Real Estate having buoyant year. Saudi Arabia followed with 14% return boosted by and end of year rally. Rest of the markets had a challenging year with Kuwait declining 8% on valuation and lack of catalysts, and Abu Dhabi down 6% coming from a high base.

The master fund ended the year up 24% (net of all fees), remarkably outperforming its benchmark the S&P Pan Arab Index (Total Return Benchmark), building on its active management approach and alpha generation focus. This has brought the since inception return (May 2019) to 68% leading the benchmark by 27%. Accordingly, the master fund ended the year with USD 76 million of Assets Under Management.

Looking forward, we believe the MENA markets have a solid investment case in 2024 supporting a continuation of our positive outlook. The Fed is likely to start cutting rates in 1H24 with 3 cuts shown by the dot plots and 6 cuts implied by the market. The strong financial buffers mean the execution toward diversifying regional economies will keep moving. Moreover, the rich IPO pipeline should keep on adding quality names and diversification potentials to regional markets.

The master fund remains well diversified with near full allocation into 32 stocks. Top allocations are mainly in Non-Cyclical Growth stories (IT, Education, F&B, ...).

## AZ Fund 1 - AZ Equity - America

Commentary from Azimut (DIFC), delegated investment manager until 13 April 2023:

In 2023, the US equity market had a positive dynamic, due to several concurring issues.

Even though the Federal Reserve continued to raise rates steadily until the summer, the fiscal policy continued to provide a boost to aggregate demand in 2023, with the fiscal deficit further widenings vs 2022.

This has led to a positive GDP growth, with an expansion of 2.2% and 2.1% QoQ respectively in Q1 and Q2. Despite the above trend economic growth and a volatile oil price, a complete recovery of global supply chains brought the shipping cost to pre-COVID levels, and this resulted in a significant disinflationary process, with US headline CPI declining steadily in the first half of the year.

The combination of quickly declining inflation and healthy GDP growth led to a rebound in the equity market, driven by Growth and Quality stocks.

In this environment, the sub fund has stuck to its strategy of investing in companies with high levels of profitability and cash flow generation, while always keeping a sector-neutral approach.

Furthermore, the sub fund was managed with an approach that also balanced the factor exposure, making sure the "active share" of the sub fund was spread across the different factors, avoiding any major imbalance.

At the end of the delegation on April 14th, the main class of the sub fund had a performance of +5,70% (EUR) and had steadily outperformed its benchmark (MSCI US Net Total Return EUR Index) that was up +4,94% over the same period.

Commentary from Kennedy Capital Management, LLC, delegated investment manager as from 14 April 2023:

2023 was a volatile year for US Equity Markets. A rehash of key market events/themes in 2023:

- Rising interest rates: To combat inflation, the Federal Reserve further raised the Federal Funds rate to 5.25 5.50% from 4.50% at the start of the year (and from 0.25% at the beginning of 2022). The yield on the 10-year treasury rose from 3.50% to a peak of 5.0% in October. As discussed in prior commentaries, rising interest rates are a headwind to equity valuations, which helps explain subdued market performance in the first three quarters of 2023.
- Turbulence in the Regional Banking sector: The sharp rise in interest rates created an asset/liability mismatch issue within the banking sector, prompting the failure of three large regional banks: Silicon Valley Bank (SIVB), Signature Bank (SBNY), and First Republic (FRCB). Fears of a widespread banking "crisis" sent regional Bank equities (within the Russell 2000 Value Index) down over 18% in the month of March.

#### AZ Fund 1 - AZ Equity - America (continued)

- (Generally) Stable economic environment: All things considered rising interest rates, problems in the banking sector, inflationary
  pressures -- US economic performance was generally steady in 2023. A healthy labor market has been a key factor, with the
  unemployment rate hovering near multi-decade lows.
- Growing Expectations of a Fed Pivot: Equity markets rose sharply in the fourth quarter as softer inflation data, falling treasury yields, and more favorable commentary from the Federal Reserve points to a less restrictive monetary backdrop in 2024.

The biggest positive drivers of fund performance during the year came from positions in the Industrials, Information Technology, and Financials sectors. On the negative side, positions in the Healthcare sector detracted from overall fund performance.

From a market cap perspective, US large cap stocks (as measured by the Russell 1000 Index) had the strongest performance during the year, returning +26.2%. US small cap stocks (as measured by the Russell 2000 Index) returned +16.6%, while Mid Cap stocks (as measured by the Russell Mid Cap Index) returned +16.8%. We believe US small and mid-cap stocks are historically cheap from a valuation perspective and offer attractive investment opportunities for long- term-oriented investors.

The volatility experienced in 2023 reinforces the advantages of being a fundamentals-based, process-oriented investor in an increasingly uncertain world. Our greatest strength lies in our ability to adhere to a consistent process that emphasizes corporate performance and valuation discipline. This sounds simple, but it's not easy. Short-term fluctuations in securities prices - caused by excitement around new technologies and themes, changes in financial conditions, etc. - creates misleading narratives and distorts true underlying business value. Anchoring our investment process to proven value creation drivers, as well as maintaining a long-term investment horizon, is paramount to distinguishing between winners and losers. By staying disciplined to our process, we can construct a portfolio of companies that in aggregate have superior fundamental attributes relative to the overall market, but at valuation levels that give us a sufficient margin of safety. We believe this is a winning recipe for portfolio returns over the long term.

## AZ Fund 1 - AZ Equity - ASEAN Countries

ASEAN equities have seen turbulent times throughout 2023, grappling with concerns such as a slowdown in exports, rising US long bond yields, a strengthening USD, and monetary tightening, leading to continuous fund outflows from the region amounting to approximately US\$8bn. However, December 2023 witnessed a reversal in US bond yields, providing some respite to ASEAN currencies and equities. Despite this, the rebound in stocks has yet to attract significant flows back to ASEAN. Investors, downplaying recession risks, are eyeing potential recoveries in the tech supply chain, spill-over effects from China's fiscal stimulus, and positive Q4-Q1 seasonality, which could support selective sectors such as technology, tourism, transportation, and industrials.

Singapore's market remained resilient in 2023, with the Straits Times Index (STI) posting a modest gain of around 1.17%. Supported by robust financial and technology sectors, the nation sustained steady economic growth and continued its digital transformation initiatives.

Indonesia navigated through political uncertainties surrounding the upcoming general election in 2024. That said, the Jakarta Composite Index (JCI) closed the year with a gain of approximately 6.96%. The country's vast consumer market and potential economic reforms attracted investor interest, particularly in consumer goods, telecommunications, and infrastructure sectors.

Thailand suffered from political tensions and disruptions in the tourism sector, with the SET Index experiencing a decline of approximately 13.99%. Despite these challenges, the nation witnessed a rebound in exports, particularly in automotive and electronics industries, supported by government-led infrastructure projects.

Malaysia faced volatility, with the FTSE Bursa Malaysia KLCI index concluding the year with a decline of around 6.66%. Domestic political shifts and external uncertainties, including fluctuations in commodity prices and weak currency, impacted investor sentiment. However, the healthcare and technology sectors showed resilience, driven by increasing demand for healthcare services and digitalization initiatives.

The Philippine stock market encountered hurdles, with the PSEi index showing a decline of approximately 1.22% in 2023. Factors such as weakened manufacturing and construction activities, reduced government spending, and adverse net trade contributions posed challenges to economic performance. Nonetheless, domestic sectors like banking and consumer goods remained relatively stable amidst economic uncertainties.

Looking ahead to 2024, prospects for ASEAN growth appear promising, with annual real GDP growth projected to recover to 4.7%, up by 50bps from 2023's deceleration to 4.2%. Trade-oriented economies are expected to drive this growth, supported by a bottoming and fragile recovery in the electronics cycle, along with continued support from travel and tourism. Additionally, ASEAN's goods exports, especially electronics, are anticipated to recover modestly, benefiting from the turnaround in global electronics sales and favorable base effects. Concurrently, the region's international travel and tourism recovery is expected to continue in 2024.

## AZ Fund 1 - AZ Equity - Best Value

During the second half of the year the Portfolio was up 9%, bringing returns in 2023 to 14%, continuing the positive trajectory we have been on since the second half of 2020.

As you know, at Cobas we don't try to predict what the stock market will do, and we can't influence or know how and how returns will play out. But with the portfolio we have today, and the value embedded in them, we are convinced that those returns will happen.

What we can influence is the target value of our funds, which we have managed to increase by 8% during the year. This means that the Portfolio trades at an average P/E of 5.8. More than 40% of the companies in the Portfolio have net cash and the average debt is 0.3x Net Debt/EBITDA for the Portfolio. This means that we have quality portfolios, with a lot of potential, but also low risk and decor-related to the market, as was clearly seen in 2022.

#### AZ Fund 1 - AZ Equity - Best Value (continued)

In fact, if we focus on the last two years, we see how the Portfolio has behaved more in line with what our funds have historically done, rising in years when the market falls and doing so in line with the market in years when it rises. In 2022, with declines of almost 20% in the US market and 10% in Europe, our Portfolio gained 11%. In 2023, our portfolio is up 14%, a performance very similar to that of the European stock markets (the Stoxx 600 is up 13% for the year).

We cannot know when value will be recognised in our companies, but what we do know from our experience of more than three decades of investing is that the combination of quality business at attractive prices is a winning formula. All it takes is patience and a long-term entrepreneurial mindset, and to illustrate this we are going to talk to you about the example of Elecnor.

Elecnor is a company that we have known for more than 30 years, during which time it has proven to be a quality and well-managed business. It has been present in the portfolio since the beginning of Cobas, due to the fact that the difference between price and value was very striking, a difference that has been accentuated over the last few years.

The company, originally from the Basque Country, started as an engineering company and then diversified by investing in the power transmission lines sector (Celeo) and renewable energies (Enerfin).

They are currently closing the sale of Enerfin at a valuation of around EUR 14-15 per share. This transaction has led to a 90% increase in the value of the shares in the last year, reaching EUR 19 per share at present. It is noteworthy that this appreciation comes after six years with the share practically flat, fluctuating between EUR 10-12. During this period, although the company continued to generate value, the market did not recognise it.

The sale of Enerfin has been at a very attractive price, but the most interesting thing is that the rest of the businesses (Engineering and Celeo) would implicitly be worth, according to the market, only EUR 4-5 per share. A valuation that we do not believe to be correct. Celeo alone has been valued by APG, one of the largest funds in Europe and Elecnor's partner in Celeo, at approximately EUR 7 per share, to which the value of the Engineering division should be added. This generated EUR 130 million of EBITDA (net of central costs) in 2023. Assuming any reasonable multiple to value this division, it is obvious that Elecnor, despite the +90% in the last year, is still undervalued and therefore continues to have an important weight in our portfolios.

The case of Elecnor and the takeover bids we have received this year (Exmar, Gaslog, Taro, Prosegur and Ap-plus) are good examples of what could happen to our portfolios. When you have portfolios at 5-7x earnings, it is normal for events to happen that cause the gap between price and value to narrow.

Although we cannot predict when or what might happen, experience tells us that revaluations do happen, sometimes very quickly. We are therefore optimistic about the future of our portfolios and have our savings invested in Cobas funds.

## Asia Commentary by Francisco García Paramés

During the last four months of 2023 I have had the opportunity to work from Singapore. It has been very productive months.

It is worth remembering that thanks to the presence of our colleague Mingkun Chan in Shanghai, about 12% of the Portfolio is invested in Asian companies.

The composition of our investment in Asia at the end of 2023:

The composition of our investment in Asia at the end of 2023:

Company	%	Company	%
CK Hutchison	1,84%	LG Electronics	0,92%
Samsung C&T	1,67%	Hyundai Motor	0,88%
Johnson Electric	1,34%	Daiwa Industry	0,82%
Okamoto	1,03%	Stella	0,72%
Ichikoh	0,99%	LG Corp	0,51%
Vtech	0,99%	Amorepacific Group	0,24%
		Total	11,95%

I would highlight several points from my stay in Singapore:

- First, the realisation that the engine of global growth is there.

In a context of zero growth in Europe and moderate growth in the United States (underpinned by strong growth in public spending), in Asia we see continued growth of 5%, supported by China, India and the ASEAN countries.

Moreover, this development has occurred despite the sharp slowdown in China's real estate sector, probably the engine of growth in previous eras. That both China and the other countries have been able to grow despite these headwinds can be explained by the strength and dynamism of their economies.

### AZ Fund 1 - AZ Equity - Best Value (continued)

Remember that these countries have a population of 3 billion people and a per capita income that is still very low, so the potential for growth is very high.

- Together with Mingkun, we have been able to visit all the Asian companies in the portfolio. They are all good companies, well managed, but the visits have allowed us to convey our point of view on capital allocation, focusing on a preference for share buybacks.
- We also had the opportunity to visit important assets of non-Asian companies such as some as-sets of Golar, BW Offshore and Wilhelmsen Services.
- Finally, we noted the progressive change in corporate governance in Japan and Korea. In Hong Kong, given its Anglo-Saxon culture and tradition, such governance is acceptable, but this is not the case in other countries.

Therefore, initiatives such as the one taken by the new CEO of the Japan Stock Exchange, Hiromi Jamaji, requiring an action plan for companies trading below book value are a good example of the improvements we can expect.

Also, in Korea we see that virtually all large companies have started share buyback and cancellation programmes. Another good sign.

All in all, it seems very important to keep a close eye on what is happening in this geographical area, because although in the short term we are not likely to increase our investments in Asia, simply because the potential of the fund is enormous, in the medium-term good opportunities are sure to arise

The largest contributors to the portfolio's performance during 2023 have been: Babcock (+1.69%) Maire Tecnimont (+ 1.66%), Danieli (+1.57%) and Elecnor (+1.39%), which have been offset by the negative contribution of Organon (-0.77%), Geopark (-0.72%) and Bayer (-0.35%). 98% of the Sub-Fund was invested as of 31 December 2023 and comprised 65 stocks. The ongoing objective is to constantly improve the portfolio, by reducing or eliminating the least attractive positions and increasing the most interesting ones. The geographic distribution of the portfolio shows a significant exposure to European companies which represents 61.63% of the portfolio. The remainder is centered in the United States (19.16%) and Asia (11.95%), with a very minor positions in Brazil, Colombia, and Israel (1.34%). The Sub-Fund's exposure to USD which was hedged through the last years has been unhedged during the year. It should be reminded however, that most of the investments in the United States, Brazil, Colombia, and Israel are global companies that are coincidentally listed there, but without being greatly ex-posed to those economy. In Asia, most companies in the portfolio have a strong cash position, some even above their market capitalization. The presence of our senior analyst Mingkun Chan in Shanghai makes it possible to adequately monitor these positions. The portfolio has some very attractive characteristics: ROCE of 32%, FCF Yield of 21%, 2024 PE of 5.8x and a upside potential of 147%. Despite this revaluation potential, this is a conservative portfolio, 38% of the companies have net cash position. In addition, 69% of the portfolio is made up of family run or single shareholder companies. The current top 5 holding portfolio represents 23.09% including the following companies: Golar LNG, Babcock Intl, Atalaya Mining, CIR-Cofide, and Currys.

## AZ Fund 1 - AZ Equity - Borletti Global Lifestyle

AZ Fund 1 - AZ Equity - Borletti Global Lifestyle class AZC EUR returned +13.2% in 2023, above its reference index.

The first part of the year was dominated by a strong rotation in favour of the growth factor strongly penalized during 2022 by the shift of the Central Banks' monetary policies toward more restrictive measures. During Q1 interest rates stabilized between 3.5% and 4% and the upcoming Artificial Intelligence revolution drove a strong rebound of the big tech names. Our portfolio clearly benefited from the overweight/out of benchmark positions in Amazon thanks to its exposure to cloud and digital services, Google and Meta that experienced a strong recovery in digital media investments, Microsoft mainly thanks to its Cloud exposure, and Visa in the digital payments' subsector.

The first half of the year overperformance also benefited from the expectation of a strong rebound of the Chinese economy, thanks to the reopening effect after almost a year of lock down due to COVID. Our strong overweight in the Luxury sector, in names like LVMH, Hermes, Ferrari, Moncler contributed to the Sub-Fund's overperformance.

Then during Q3 inflation remained high and the economy stayed stronger than expected, driving a more dovish communication by the Central Banks. Interest rates started to rise again well above 4% touching a peak level of 5% in October. Increasing interest rates put downward pressure on Equity markets valuation. It's also worth highlighting that in China a declining real estate and equity market put pressure on consumer confidence and the economic rebound was much lighter than expected.

Indeed, the luxury sector and more in general all the consumer names with a relevant exposure to China (i.e. Spirits, Sporting goods) underperformed the rest of the market and the Consumer sector and penalized the portfolio in Q3.

On the other hand, our Travel and Leisure overweight partly compensated the Q3 underperformance thanks to the still buoyant consumer behaviour more skewed toward experience than products.

Moreover, Tech related names remained more resilient thanks to a strong top line growth and a better margin execution driven by the cost cutting measures taken the year before.

Finally, during Q4, inflation expectations started to come down thanks to the annualization of a strong comparison base. Interest rates followed accordingly, declining toward 4% again, making the equity asset class more attractive in terms of valuation. The Sub-Fund in general followed the rising equity market during the last two months given a more general risk on attitude.

In conclusion, the Sub-Fund's 2023 overperformance can be explained by the overweight and out of benchmark positions in the IT related names and the underweight position in Consumer Staples that underperformed massively the market due to interest rates rise and a shift in consumptions more toward leisure and travel than stay-at-home products.

#### AZ Fund 1 - AZ Equity - Brazil Trend

The team took advantage of uncertainties and volatility, managing to capture important movements this year through active management in the selection of stocks/sectors and tactical management of the portfolio's net exposure (long for most of the time).

At the beginning of the year, highlight for short positions in retail sector, including Americanas (AMER3 BZ). Companies in this sector faced operational challenges and had high leverage, especially due to difficulty in cash generation. The thesis materialized, the stocks recorded significant falls, and generated substantial gains for the Fund.

Also remarkable were the long positions in Petrobras and Banco do Brasil. Both companies faced uncertainties related to new directions under new leadership/government. This risk was mitigated and replaced by the perception that strategies would change little (if at all) throughout 2023. As a result, the stocks registered gains of 95% and 76%, respectively, contributing to the portfolio.

### AZ Fund 1 - AZ Equity - CGM Opportunistic European

The Sub-Fund recorded a positive performance equal to +11.72%, against the STOXX Europe 600 +12.72%. The average net equity exposure was 95%

During 2023 financial markets experienced a rollercoaster ride which ended with bond and stock markets rallying sharply in the final part of the year on the back of lesser concerns about inflation and the global economic outlook.

High inflation was a major concern for investors, the ECB and other central banks around the world aggressively raised interest rates in an effort to curb inflation, which weighed on stock and bonds markets early in the year.

In the first quarter we witness significant financial stress as many US regional banks failed and Credit Suisse experienced a bank run which led to a takeover by UBS, thanks to the negotiation and warranties offered by the Swiss government.

The war in Ukraine, the Israel/Palestine conflict, and the risk of a broader escalation in the Middle East region also contributed to market volatility. Investors are obviously concerned about the potential for these conflicts to disrupt supply chains and damage the global economy.

The Artificial Intelligence revolution took center stage following the release of Chat GPT to the general public and the upbeat guidance given by the likes of Nvidia and AMD in the semiconductors space. Throughout the year, the so-called "Magnificent Seven" (Apple, Amazon, Alphabet, Google, Meta, Microsoft, Nvidia, and Tesla) led the way in equity markets, posting impressive gains as investors renewed their optimism about the sector's long-term growth prospects. The strong performance of technology stocks contrasted with the relative weakness of other sectors, such as industrials and energy, highlighting the shifting preferences of investors.

At the beginning of the year, the great majority of economists predicted a recession in the following quarters, the prevailing narrative progressively changed during the year to a scenario of soft landing, indeed few are now suggesting a goldilocks scenario.

The best performers in our portfolio were technology related stocks such as ASML (+36%) and STMicroelectronics (+23%); cement makers and specialist chemicals as Heidelberg Materials (+41%), SOL (+58%), Buzzi (+33%), Brenntag (+32%); consumer discretionary, in particular L'Oreal (+28%) and Davide Campari (+25%).

On the negative side the biggest underperformers in our portfolio were Siemens Energy (-45%), Bayer (41%) and Zalando (-35%).

### AZ Fund 1 - AZ Equity - CGM Opportunistic Global

In 2023, the Sub-Fund produced a positive return of +16.61%; during the same period the performance of the MSCI World EUR H Index was +20.96%.

The year started with considerable worries over the state of the world economy. Inflation worries were a bit scaled down in the early part of the January, but some positive revisions of 2022's data reversed this stance. For this reason, Powell suggested in February that the Fed might be able to further hike its key interest rates references, triggering a domino effect in the markets, with some weaker local regional banks being de facto unable to operate without external support. In a matter of days, fears over the stability of the US financial system became the only topic of discussion of monetary policy makers. The Fed promptly created special facilities to support the banks in need, consequently expanding the CB asset base. The market interpretation of this action was straightforward, overweight "megacaps" and underweight everything else.

Some uncertainty over the economy stayed until the earning season of the second quarter, but Nvidia reporting extremely well compared to market estimates triggered a massive short-squeeze for the equity markets, with an uptrend that lasted until the end of July.

The correction in August, and later during the fall, was triggered by a resurgence of interest rates, which reached new highs for the year; but favourable macroeconomic data, followed at the start of November by a dovish stance from the Fed and a liquidity boost from the treasury markets through the QRA, supported all asset classes until the end of the year.

The Sub-Fund is managed by combining a geographic investment strategy, mainly in passive instruments, with an active strategy based on stock picking. The active part of the portfolio remained invested mainly in value stocks which negatively impacted on the overall performance versus benchmark for the year.

#### AZ Fund 1 - AZ Equity - China

The Sub-Fund's Class A USD Institutional saw a negative 22.23% performance in 2023. The Sub-Fund's concentration on the healthcare and technology sectors were the biggest drags on the overall performance during the year.

Expectations were high at the beginning of 2023 as the removal of the zero-COVID policies, which were so detrimental to the economy, were finally removed. While China did manage a fairly robust consumption-driven recovery in 2023, the economy suffered from headwinds from external demand (exports) and fixed asset investment (from lower real estate investment). While growth was not as strong as expected for the Chinese consumer, we saw very strong growth in services (travel, entertainment, dining) and in certain large ticket consumer durables such as cars (noteworthy to point out that China is one of the few auto markets in the world that actually saw sales growth compared to the pre-pandemic period).

But while the Chinese consumer has been spending above pre-pandemic levels, we also saw a record amount of savings going towards deposits and outflows from investments (both equities and real estate). Therefore, we believe what we are seeing is not a financial crisis or real estate crisis (both of which are highly containable in China) but a crisis of confidence, as both local retail and foreign institutional investors have reallocated away from Chinese equities. This persistent negative sentiment towards Chinese equities is particularly jarring considering record fundamentals for Chinese equities (CSI300 will likely close 2023 with 11% earnings growth, and the China Big Tech companies are all clocking record revenues and earnings). The driver for this lack of confidence is likely the cumulative effect of the various government policies, from the zero-COVID policy to the crackdowns on the tech, education and healthcare sectors, that have snowballed into a lack of confidence towards equities.

This lack of confidence in equities has had an incredibly negative effect on equity valuations, bringing both the A-share and H-share indices to record low valuations, and particularly impacted the high beta names which are over-represented in our portfolio (primarily tech and healthcare). During the year we have re-allocated away from the tech and healthcare sectors towards lower volatility and high dividend sectors such as finance and energy. However, we continue to believe that the tech sector offers tremendous value at current valuations and given their tremendous fundamentals.

Fortunately, the government seems to have finally realized the impact of this lack of confidence in Chinese equities has potential ramifications into the real economy, and at the beginning of 2024 has already started to implement policies to further encourage investment in equities (including rumored large state sponsored direct investments). We therefore think 2023 has likely seen the bottom for Chinese equities.

#### AZ Fund 1 - AZ Equity - Egypt

Although it was a non-consensus call, 2023 was a year of relief for global equities backed by better-than-expected economic activity, sharp inflation normalization, and the high hopes that Fed rate cuts start as early as March 2024. While the strong performance for global equities, especially in the US, was spearheaded by the Technology sector and the Magnificent 7, the breadth of the gains remarkably improved towards year end in line with the Fed dovish shift. The MSCI ACWI rallied 20% almost matching the 2023 decline. On the other hand, the MSCI EMs gains came at 7%, somehow capped by the shaky performance of Chinese equities.

The Egyptian stock market ended 2023 on a very strong note as well with the local equities emerging as one of the top winners out of the residing macro challenges. The local economy has been largely impacted by the shortage of dollar inflows amid the global high interest rate environment, and the hefty external debt payment schedule. Something that had put significant pressure on the Egyptian pound either in the official (losing 20% of its value in 2023) or the parallel market (official/parallel gap of around 40% end of 2023) with the CPI inflation hitting fresh all-time highs reaching 38% in September.

While the market continued to witness a lack of foreign participation and inflows, local investors have been rushing into the market to hedge against weakening of the EGP purchasing power. Local institutions have injected fresh flows in the market just starting to rectify decades of asset misallocation. On the other hand, retail investors activity strengthened with several investment channels opening for them to participate. With that in mind, the main benchmark EGX30 has recorded gains of 71% (36% in dollar terms) notching a new all-time high after the other.

The Sub-Fund has rallied 37% during the year outperforming the main benchmark (36%), and the more diversified EGX30cap (35%). NAV of the Sub-Fund has ended the year at an all-time high boosting the since inception return to 76%, outperforming the market benchmarks in every single year. This has brought the Sub-Fund' Assets Under Management to USD 29.4 million.

Forward looking, the war in Gaza has made Egypt's balance of payment dynamics more challenging as downside risks to Tourism, Natural Gas exports and Suez Canal revenues are looming. That said, and backed by its Geopolitical weight amid the crisis, the IMF along with several international financial institutions have started to show a lot of flexibility in boosting their support to the country. Recent discussions involved at least doubling the loan under the current IMF program, EUR 10 billion of European Union investments/assistance Furthermore, Egypt is seeking the US guarantee to issue bonds in the international debt market. Things that are likely to help the country in stabilizing the external position.

As for the market, while Egypt has made a good progress on the Asset Sale Program, another round of official EGP devaluation is around the corner, as a prerequisite for the resumption of the IMF review. This is likely to boost the 2024-25 EPS growth and attract foreign inflows, unlocking further upside potential. Indeed, while the main market has recorded gains exceeding 70% in 2023, its PE multiple has barely moved given the strong growth in corporate earnings. Furthermore, the main index is still below the pre-COVID highs in USD terms.

### AZ Fund 1 - AZ Equity - Emerging Asia FoF

During 2023, the main unit class (A-AZ Fund) produced a performance of -14.79 %.

The Sub-Fund was invested either in regional Emerging Asia type of funds, that are diversified in different Asian countries, and in funds focused on a single country. The selected third-party funds invest in the entire Asian region excluding Japan. Only a few of the regional funds partially invest in Australia and New Zealand. The fund remained well diversified in terms of investment style, geographical asset allocation and sector exposure. It's a long only equity fund therefore its net equity exposure cannot stay below 80%.

At the beginning of the year the Sub-Fund manager drastically increased the exposure in China for around 16% through futures on Hang Seng and third-party funds mainly All China and China A. The end of COVID restrictions made China the main recovery story for 2023. The net exposure remained around 99% at the end of January; in fact, around 12% of positions in Asean funds and value strategy regional were reduced accordingly. In February the rise in geopolitical tensions between China and USA was the main reason to reduce the net equity exposure overall in the fund, mainly cutting around 13% the exposure on China until March. The equity exposure was partially replaced by investing in Asia Pacific funds, and high dividend regional strategies. The net equity exposure at the end of March was around 93%.

The second quarter was characterized by the chronic weakness of the Chinese market mainly due to the lack of fiscal policy from the Chinese central government and an almost absent intervention of ad hoc monetary policy to boost the economy from the central bank. Chinese exposure was reduced for further 8% in April and May, whilst growth regional strategies were also reduced for around 6%. These positions were replaced by increasing the exposure on Asean Funds, dividend regional funds, value regional funds and low volatility regional funds. Position on India was increased through futures by around 6%. In June the Biden Administration made a few statements to try to reduce the geopolitical tension between the US and China. The Sub-Fund manager tactically increased the exposure on China for a few weeks for around 14% but, by the end of June more than half of the tactical exposure was immediately sold. Net equity exposure at the end of June was around 91%.

During the third quarter the clear wording from the central government to support the real estate sector induced a further tactical increase on the Chinese market through futures in July. However, in August, the news of the possible imminent default of Evergrande pushed the Sub-Fund manager to cut the exposure on China for around 18% mainly through futures. Part of the position on growth and Chinese funds were replaced through India and high dividend regional funds. At the end of September, the net equity exposure was around 86%.

In October the rise in volatility in the emerging equity markets due to the geopolitical tensions in the Middle East was the reason why the net exposure remained quite low. At the end of the month the manager realized part of the exposure in India due to the strong overperformance year to date compared to the rest of Asia. China, in November was raised in exposure mainly through futures on Hang Seng and MSCI Global Emerging. The Chinese underperformance since 2023 made the Sub-Fund manager in a position not to keep China underweight for the rest of the year. Valuation in China reached the lowest level in the last 20 years and any potential short squeeze in the market was around the corner. The main position cut in the fund was related to blend strategies that were no longer in the position to generate alpha through their investment process. Dividend and value regional strategies were reduced too.

Net equity exposure at the end of the years is around 104%.

## AZ Fund 1 - AZ Equity - Emerging Europe FoF\*

During 2023, the main unit class (A-AZ Fund) produced a performance of +16.51%.

The Sub-Fund was invested either in regional Emerging Europe type of. The chosen third-party funds are mainly focused to invest in Eastern Europe.

After the war in Ukraine started in 2022 all the Russian asset classes, including the currency, were no longer tradable. The immediate reaction of the third-party funds with exposure to Russia was to close any transaction to new investments and new redemptions. In February JP Morgan, following what Templeton and Schroder did in 2022, decided to adopt a different investment policy that re-opened the fund but exclusively trading the stocks outside Russia. At the end of March 2.5% of the Egypt fund was sold for the slowdown in the economy. In April also Amundi opened a new fund excluding the Russian Assets. One of the major changes saw the increase of the JP Emerging Europe fund up to 14% whilst the investment in the Fidelity EMEA fund was reduced around 10% since its Middle East exposure was correlated to the oil price weakness.

During the third quarter no major change occurred. In September the JP Morgan fund was reduced by around 5% whilst the Fidelity EMEA fund was increased for a similar amount. The Sub-Fund was reopened excluding the Russian assets. In the second week of October the Sub-Fund was merged into AZ Fund 1 - AZ Equity - Global Emerging FoF.

# AZ Fund 1 - AZ Equity - Emerging Latin America

The team took advantage of uncertainties and volatility, managing to capture important movements this year through active management in the selection of stocks/sectors and tactical management of the portfolio's net exposure (long for most of the time).

At the beginning of the year, highlight for short positions in retail sector, including Americanas (AMER3 BZ). Companies in this sector faced operational challenges and had high leverage, especially due to difficulty in cash generation. The thesis materialized, the stocks recorded significant falls, and generated substantial gains for the Fund.

Also remarkable were the long positions in Petrobras and Banco do Brasil. Both companies faced uncertainties related to new directions under new leadership/government. This risk was mitigated and replaced by the perception that strategies would change little (if at all) throughout 2023. As a result, the stocks registered gains of 95% and 76%, respectively, contributing to the portfolio.

<sup>\*</sup> See Note 1 for further details.

### AZ Fund 1 - AZ Equity - Environmental FoF

In 2023, unit class (A-AZ Fund) of AZ Fund 1 - AZ Equity - Environmental FoF ("Environmental FoF") had a performance of +0.49%.

Environmental FoF is a fund-of-funds that invests in third parties Fund focused on environmental themes like Climate change, Renewable Energy, Future of transportation and mobility, Agricultural innovation, new food solutions, etc.

Being a thematic fund, Environmental FoF will always show a sectoral preference, which is the direct result of the underlying exposure of the funds that are exposed to environmental topics. The sector tilts are mainly towards industrials, technology, utilities, basic materials, consumers. Healthcare and financials are barely represented. Europe is usually overweight because all the funds belonging to the investment universe are usually underweight USA.

Grouping all the environmental themes into broader groups, most of them are showing growth characteristics, whit probably the only exception of the agribusiness and food themes, that tend to exhibit more value tilts.

Given the thematic tilt of the product, throughout the year the fund was overweight in natural resources, defensive consumption, industrials, technology, and utilities, while pharmaceuticals and financials were hardly represented. Geographically, Europe was overweight while America was underweight.

During the first quarter of the year, about 50 percent was invested in products with diversified exposure to the climate theme, going for managers with a value approach. This group of managers has always accounted for about two-thirds of this group's total exposure.

Completing the portfolio were thematic exposures to the infrastructure and renewable energy sectors, always around 15 percent each, and about twenty percent exposed to the food, water, and traditional materials sectors.

Since April, the proportion of growth managers within the climate theme fund segment has been raised. Already by the end of May this portion was about 30 percent of the portfolio. Conversely, funds on infrastructure and funds on renewable energy have been reduced.

During the summer months the weight of Growth funds has been increasing, reaching 50 percent of the portfolio. Also, during the course of the summer, particularly since August, a share of instruments replicating Carbon Neutral / Paris aligned indices was also introduced. This was done to reduce the volatility of the sub-fund and also reduce the tracking error of the sub-fund. In fact, composing a portfolio solely with active thematic instruments greatly increases the deviations from the benchmark and increases the share of small caps. Exposure to renewable energy, which can go to suffer in an environment of interest rates remaining at high levels, has therefore been greatly reduced. Indeed, during the summer it became apparent that the inflation dynamic is more persistent than was expected at the beginning of the year, and as such interest rates will also remain high for a long time. Therefore, there is a desire to reduce exposure to companies that have often been heavily indebted to finance their growth.

Already as of the end of September, about 30 percent of the portfolio was positioned in passive climate index replication instruments, while more than 50 percent of the portfolio was positioned in growth-type climate funds, with the renewable energy and infrastructure sector zeroed out.

The market action for the months of November and December completely reversed the market action of the previous 3 months. At the beginning of the November Fed chairman Powell expressed satisfaction with the restriction of financial conditions and gave hint that the rate hike cycle has ended. Thanks to this there was a sharp decline in interest rates and a strong rebound in stock markets, which had suffered during the previous months.

During the month of December, the renewable energy component was gradually lifted, and by the end of the month it came to weigh 20 percent of the NAV. There are a whole series of favorable elements. Falling interest rates favor these kinds of companies that are often heavily indebted, as well as evidence of a still strong business cycle and the positive evidence coming out of COP28, with continued support for investment and development in the renewables sector.

The portfolio was at more than 90 percent net exposure throughout the year and ended the year at 98 percent exposure.

### AZ Fund 1 - AZ Equity - Escalator

The AZ Fund 1 - AZ Equity - Escalator Class AZC EUR returned +9.87% in 2023.

The first quarter of 2023 was initially driven by the positive news of China's reopening, grappling with an exacerbation of the pandemic at the end of the previous year, and the reduction in gas prices, favourable news for the European continent. The wave of positivity was challenged during February by still-supportive inflation data, which rekindled the possibility of further restrictive monetary policies and the consequent upward probability of a global recession. In addition, a spike in volatility in early March was triggered by the bankruptcy of Silicon Valley Bank and the collapse of Credit Suisse, before the intervention of the respective governments and regulators (along with the takeover of the Swiss bank by UBS) brought the situation back to clearer conditions.

During this period, the Sub-Fund gradually increased its equity exposure towards the upper end of the 70%-75% range, diversifying its purchases with investments that were also geographic and thematic and included in a in a portfolio with a high degree of diversification allocated mainly in global instruments. At the same time, bond exposure, allocated in a diversified basket across investment funds and single name bonds, gradually fell to the lower end of the 20%-25% range to favour investment in equities.

In the second quarter, the period's macro data showed an economy that was still resilient and supported by a reporting season with a positive tone. The most notable event of this period, and one that also led to a further market acceleration, was the increased focus on the potential of artificial intelligence, triggered after US company NVIDIA surprised investors with an upward revision of its estimates.

During this quarter, the Sub-Fund continued to gradually increase its equity exposure in the 75%-80% range, including with theme and style-related purchases, although the equity component was tactically adjusted downwards in the latter period. Fixed income exposure, which gradually declined, nevertheless remained at the lower end of the 20%-25% range.

### AZ Fund 1 - AZ Equity - Escalator (continued)

The summer quarter initially saw a continuation of the previous uptrend, thanks in part to a reporting season without any particular negative surprises and some tentative signs that inflation might be coming down, interrupted by a rise in bond yields driven first by expectations for the Jackson Hole Symposium, a conference that remained rather moderate, and then by the September central bank meetings, which essentially reiterated the concept of 'higher rates, longer'.

Summer volatility was actively dealt with, trying to take advantage of market pattern and bringing equity exposure up to around 80%, within which we noted some sector and style purchases. Fixed income exposure remained broadly stable at around 20%.

The last quarter of the year, after a negative month of October also due to the outbreak of the war between Israel and Palestine, saw a new market acceleration, driven by a reversal in bond yields, a still generally positive quarterly report, signs of slowing inflation and, above all, a December meeting of the Fed interpreted by the market as a turning point towards a more accommodative period.

In the final quarter of the year, the Sub-Fund increased its exposure towards the upper end of the 80%-85% range, benefiting from the upward market trend and also reinforcing the investment in investment funds characterised by specific investment styles. On the other hand, the bond portfolio was lightened and brought just below 20%, resulting in a slight reduction in duration.

In 2023, the Sub-Fund underperformed the reference index. Underweight in equity, especially in the first part of the year, is the main detractor on a year to date basis. In addition, some picks in factor and thematic baskets performed below expectations and the benchmark.

## AZ Fund 1 - AZ Equity - Europe

During the year, the institutional class of the Sub-Fund achieved a performance of 11.93% while the retail classes were up 9.93%.

European equity markets experienced notable gains in 2023 with the MSCI Europe climbing by 15.8% and the STOXX600 by 12.7%. Yearly advancements were observed in Italy's FTSE MIB, which soared by 28.03%, Spain's IBEX 35 with a 22.76% increase, Germany's DAX which rose by 20.31%, and France's CAC 40, registering a 16.52% gain. A prevailing sense of optimism (notably during the last 2 months of the year), driven by the anticipation of a potential shift by central banks towards reducing interest rates to shield regional economies from significant downturns, propelled the European markets upward. In contrast, London's FTSE 100 did not keep pace with most European indices, achieving a modest annual growth of 3.78%. Factors such as the index's significant exposure to mining companies dependent on China's decelerating economy, and oil-centric energy firms, coupled with a persistent domestic inflation rate, adversely impacted the UK's leading index throughout the year.

Looking at the sector's performance, the year saw a trend reversion with cyclicals that suffered in 2022 like industrials, consumer discretionary and technology being the best sectors of 2023, and on the other side commodities driven sectors and defensives lagged meaningfully vs the broad market.

During the year, the portfolio remained concentrated in a range of 65-75 companies, with an average net exposure at 100%. The relative positioning was balanced, with overweight positions in defensives like pharma as well as in cyclicals like semiconductors and auto components. The main detractors, compared to the index, were the overweight within the payments sector and some 'value' names that underperformed in the 'growth'-friendly market narrative. The largest positive contributions in terms of alpha generated came from a selection of European banks, the media sector, and the broad semiconductor industry.

The top 5 positions in the Sub-Fund in terms of absolute weight at the end of the year were Novo Nordisk (Pharma), Nestle (Staples), Novartis (Pharma), AstraZeneca (Pharma) and Roche (Pharma). The main overweight positions relative to the benchmark at the end of the year were DSV (Logistic), LSE (Financial), Ryanair (Airline), Siemens (Capital Goods), UMG (Media).

## AZ Fund 1 - AZ Equity - Food & Agriculture

In 2023 the Sub-Fund's performance was -5.45% for class Institutional Acc Euro, and -7.3% for the class retail Acc Euro, compared to the MSCI World Net total return +19.6%.

The global equity markets in 2023 experienced a mix of challenges and opportunities. Despite some banks' failures and the fear of a recession, global stocks were able to rally thanks to the combination of a solid economy, better-than-expected corporate earnings, and an apparent end to the Federal Reserve's interest rate hikes.

From a macroeconomic perspective, inflation has cooled, and the economy remained solid despite the first-quarter regional banking crisis, which sparked fears of a credit crunch. While the Fed raised interest rates four times over the year, at their December meeting, officials signaled that no additional increases are expected and they will likely lower rates in the coming year.

Looking at sectors, Information Technology, Communication Services, and Consumer Discretionary were the three biggest winners in 2023; this performance can be explained by positive earnings revisions of these sectors, a macro environment more resilient than expectations and the Artificial Intelligence enthusiasm, with stocks like NVIDIA and AMD seeing triple-digit gains.

On the other hand, Consumer Staples, Energy, and Utilities all closed with losses, with the latter suffering from a confluence of factors: dwindling recession fears, high treasury yields, and negative earnings revisions.

The negative performance of the sub-fund can be explained by the structural thematic exposure to sectors such as Consumer Staples and Materials which deeply underperformed in 2023.

### AZ Fund 1 - AZ Equity - Food & Agriculture (continued)

However, we remember the investment strategy aims to achieve long-term capital growth through exposure to three key themes that address the challenge of sustainable development of the food chain:

- Increased productivity of cultivated land (industrial machinery, automation in agricultural production and chemical sectors);
- Increased nutritional content and healthy food (Food, Ingredients);
- Increased logistics and food preservation efficiency for the reduction of food waste (packaging, logistics, food delivery).

The portfolio remained concentrated in 40-45 companies, with a net exposure in equities of between 90 and 95%. Geographic exposure is diversified across developed market with US and Canada forming 45%-50% of the Sub-Fund and Europe 50%, Asia remains at 2%.

The 2023 top three positive contributor were: Brenntag, Danone and Compass.

The 2023 top three negative contributors were: ARCHER-DANIELS-MIDLAND, Nutrien and Corteva.

## AZ Fund 1 - AZ Equity - Future Opportunities

According to its investment policy, the Sub-Fund was invested especially in US Tech/growth stocks. The net equity exposure was gradually increased from 120% to 140% during the year, following the US Tech stocks momentum.

#### AZ Fund 1 - AZ Equity - Global Emerging FoF

During 2023, the main unit class (A-AZ Fund) produced a performance of -7.09%.

The Sub-Fund was invested either in global emerging markets type of funds, in funds focused on macro areas (Asia, Europe, Latin America); in funds focused on a single country (China). It's a long only equity fund therefore its net equity exposure cannot stay below 80%.

At the beginning of the year the Sub-Fund manager drastically increased the exposure in China for around 15% through futures on Hang Seng and third-party funds mainly All China and China A. The end of COVID restrictions made China the main recovery story for 2023. The net exposure remained around 101% at the end of January, in fact around 12% of positions in Asean funds and value strategy global emerging funds were reduced accordingly. In February the rise in geopolitical tensions between China and USA was the main reason to reduce the net equity exposure overall in the Sub-Fund, mainly cutting around 15% of the exposure on China, which was further reduced for 5% in March selling Asian Growth and China Funds. The equity exposure was partially replaced by investing in Asia Pacific funds, Asean, and global emerging value strategies. The net equity exposure at the end of March was around 92%.

The second quarter was characterized by the chronic weakness of the Chinese market mainly due to the lack of fiscal policy from the Chinese central government and an almost absent intervention of ad hoc monetary policy to boost the economy from the central bank. Chinese exposure was reduced for further 8% in April and May whilst growth regional strategies were also reduced for around 3%. These positions were replaced by increasing the exposure on Asean funds, Dividend, Value, and minimum volatility global emerging funds. Position on India was increased through futures by around 7%. In May, Brazil exposure was increased around 5% through futures. In June the Biden Administration made a few statements to try to reduce the geopolitical tension between the US and China. The Sub-Fund manager tactically increased the exposure on China for a few weeks for around 15% but, by the end of June, more than half of the tactical exposure was immediately sold. Net equity exposure at the end of June was around 101%.

During the third quarter the clear wording from the central government to support the real estate sector induced a further tactical increase on the Chinese market through futures in July. However, in August, the news of the possible imminent default of Evergrande pushed the Sub-Fund manager to cut the exposure on China for around 15% and another 5% in September mainly through futures, China Funds and Asia Growth funds. Part of the position on growth and Chinese funds were replaced though India and value strategy global emerging funds. At the end of September, the net equity exposure was around 88%.

In October the rise in volatility in the emerging equity markets due to the geopolitical tensions in the Middle East was the reason why the net exposure remained quite low. At the end of the month the manager realized part of the exposure on India due to the strong overperformance year to date compared to the rest of the other emerging areas whilst short positions on China were closed.

At the end of the year the Fed reassured the markets that we are probably at the pivot and from next year we can experience multiple rate cuts. From November till the end of December the markets discounted 7 rate cuts with a drop in the 10-year treasury yield of around 120 basis points from the peak of October. That caused a deep depreciation of the dollar that generated a rally in the emerging markets ex China. The net equity exposure was drastically increased over 100% mainly through small cap Asian and Global emerging funds, and through futures on MSCI global Emerging. Asian value strategies were reduced and replaced with global emerging value strategies. Net equity exposure at the end of the year is around 108%.

### AZ Fund 1 - AZ Equity - Global ESG

For the calendar year 2023 the primary unit class (A-AZ Fund) of AZ FUND 1 - Global ESG had a performance of +4.45%.

In January the financial markets experienced a significant rise in equities, buoyed by the reopening of the Chinese market and by a strong technical rebound after the market rout of 2022. The fund's performance was impacted by its sectoral positioning, particularly due to an OW in Pharmaceuticals, Utilities and Basic Consumer Goods, resulting by a strong weighing towards Minimum Volatility strategies, Value strategies and Income strategies. Just the OW positioning in the financial sectors helped the relative performance. The strongest performance at the beginning of the year was achieved by the technology sector, a sector where the fund positioning was underweight. At the beginning of the year was slightly increased the exposure to emerging markets, especially Asia, with a shift in sector exposure because of halving the exposure to Minimum Volatility funds.

#### AZ Fund 1 - AZ Equity - Global ESG

February witnessed a shift in sentiment, with inflation data showing a persistence of inflation. The fund's equity exposure at around 90% reflected a market recalibration in response to higher-than-expected core inflation data, which impacted bond and equity markets. Adjustments were made, increasing exposure to European markets, which had an exposure nearly double the one of the benchmark.

March brought financial turbulence with the Silicon Valley Bank and Credit Suisse crises, leading to a shift in the fund's portfolio. Changes implied an increase in the exposure to Quality Growth managers and managers with a focus on mega cap stocks. Still the biggest bulk of the portfolio, around 40%, remained focused on Global Income, Value and Minimum Volatility strategies. The biggest reduction was made in the Value bucket, massively reduced, which having a cyclical tilt was deemed not appropriate due to potential reverberate of the credit crunch as a possible fallout of the USA financial turbulence.

April was a relatively calmer market, marked by a slowdown in business confidence, and the reinforcing focus of the market on large-cap companies and oligopolistic businesses. The net equity exposure was slightly increased, mainly with a focus on Quality growth managers.

In May the net exposure was kept at around 94%. The month was characterized by a continued emphasis on technology and growth stocks, driven by the market's positive reception to Al and its potential impact on labor productivity. Just to underline this polarization, during the month of May the FANG index experienced a +17% performance, while the S&P equal weight index.

June marked another period of significant growth in technology stocks, particularly within the NASDAQ and FANG+ indices. The fund's strategy included increasing exposure to Blend funds and Quality growth managers, bringing the combined exposure to them at around 35%. For the whole quarter the fund has an overweight position on Europe and Japan, with a sector exposure where the biggest relative exposure was towards industrials. The relative underweight on technology and USA represented the biggest performance detractor, with the NASDAQ index that registered its best 1H year performance since 1983.

The month of July saw a continuation of the bullish trend already in place since the beginning of the year. This bullish trend has been supported by macroeconomic data indicating strength in the US economy, while in contrast the European economy, especially Germany, that began to show signs of weakness both in the dynamics of confidence indicators and in reported macroeconomic data. The exposure to Europe was reduced, while increasing funds with a quality growth approach and global blend approach and reducing funds on Income strategies and Minimum Volatility strategies, plus increasing the pure exposure to technology via dedicated funds. Due to those changes within the portfolio the exposure to technology was increased.

The following month, till the end of October, was characterized by a rise in bond yield and equity market retracement. What happened is that inflation data proved to be more stubborn than what market expected, while economic data from China and Europe showed increased weakness. Within that context all central bankers around the world kept reinforcing the message of "higher for longer", showing less willingness to support the market without evidence of persistent inflation slowdown. Also, within the summer, in august, Fitch downgraded the credit rating of USA, thus placing enfaces on the debt sustainability of most developed countries around the world. By the end of September, the equity market experienced its worst quarter in more than a year. Higher oil prices, higher bond government yield and increased market aversion favored the portfolio positioning, skewed towards pharma and underweight consumer cyclicals. During the quarter the overweight exposure to Europe has been reduced while increasing the USA market and keeping an overweight towards Japan.

The fourth quarter was marked by the rising geopolitical tensions that began at the beginning of October with the start of the Israeli-Gaza war. This event prompted and reinforced the higher inflationary background. Higher energy prices, strong USA macroeconomic data, strong earning season especially for US listed companies, all pusher government bonds yield higher and the 30Y UST for the first time since 2007 breached the 5% threshold. Within the portfolio it was increased the exposure to technology and decreased the exposure to Europe and Japan.

The market action for the months of November and December completely reversed the market action of the previous 3 months. At the beginning of the November FED chairman Powell expressed satisfaction with the restriction of financial conditions and gave hint that the rate hike cycle has ended. This immediately prompted a strong rebound of technology and consumer cyclicals. The portfolio has been massively rebalanced by increasing the weight of technology and decreasing the exposure to pharmaceuticals. The exposure to USA has been increased while decreasing the exposure to Europe and Japan. The market action of November continued also into December, with a broadening of the market dept that started to positively impact the small cap components, a massive laggard in the YTD performance, therefore increasing the increase the possibility of a long term catches up of the small cap components vs the large cap. Just to remember, the whole 2023 performance of the Global equity market has been incredibly polarized in a bunch of few stocks. Just seven stocks (the so called Magnificent seven) accounted for slightly more than 40% of the whole MSCI All Country World performance.

The Sub-Fund was fully invested for both November and December, trying to fully benefit from the positive market environment.

#### AZ Fund 1 - AZ Equity - Global FoF

For the calendar year 2023 the primary unit class (A-AZ Fund) of AZ FUND 1 - Global Equity had a performance of +3.86%.

In January the financial markets experienced a significant rise in equities, buoyed by the reopening of the Chinese market and by a strong technical rebound after the market rout of 2022. The fund's performance was impacted by its sectoral positioning, particularly due to an OW in Pharmaceuticals, Utilities and Basic Consumer Goods, resulting by a strong weighing towards Minimum Volatility strategies and Value strategies. Just the OW positioning in the financial sectors helped the relative performance. The strongest performance at the beginning of the year was achieved by the technology sector, a sector where the fund positioning was underweight. At the beginning of the year was increased the exposure to emerging markets, especially Asia, with a shift in sector exposure because of reducing holdings in Minimum Volatility funds.

### AZ Fund 1 - AZ Equity - Global FoF (continued)

February witnessed a shift in sentiment, with inflation data showing a persistence of inflation. The fund's equity exposure at around 90% reflected a market recalibration in response to higher-than-expected core inflation data, which impacted bond and equity markets. Adjustments were made, reducing Asia exposure, and increasing exposure to European markets, which coupled with Japan became the largest relative overweight within the portfolio.

March brought financial turbulence with the Silicon Valley Bank and Credit Suisse crises, leading to a shift in the fund's portfolio. Changes implied an increase of the exposure to Quality Growth managers and managers with a focus on mega cap stocks. Still the biggest bulk of the portfolio, around 40%, remained focused on Global Income and Minimum Volatility strategies.

April was a relatively calmer market, marked by a slowdown in business confidence, and the reinforcing focus of the market on large-cap companies and oligopolistic businesses. The net equity exposure was slightly increased, mainly with a focus on Quality growth managers.

In May the net exposure was kept at around 95%. The month was characterized by a continued emphasis on technology and growth stocks, driven by the market's positive reception to AI and its potential impact on labor productivity. Just to underline this polarization, during the month of May the FANG index experienced a +17% performance, while the S&P equal weight index.

June marked another period of significant growth in technology stocks, particularly within the NASDAQ and FANG+ indices. The fund's strategy included increasing exposure to Blend funds and technology. For the whole quarter the fund has an overweight position on Europe and Japan, with a sector exposure that favored pharma, financials, and industrials. The relative underweight on technology and USA represented the biggest performance detractor, with the NASDAQ index that registered its best 1H year performance since 1983.

The month of July saw a continuation of the bullish trend already in place since the beginning of the year. This bullish trend has been supported by macroeconomic data indicating strength in the US economy, while in contrast the European economy, especially Germany, that began to show signs of weakness both in the dynamics of confidence indicators and in reported macroeconomic data. The exposure to Europe was reduced, while increasing funds with a blend approach and reducing funds on Income strategies and Minimum Volatility strategies. Due to those changes within the portfolio the exposure to technology was increased.

The following month, till the end of October, was characterized by a rise in bond yield and equity market retracement. What happened is that inflation data proved to be more stubborn than what market expected, while economic data from China and Europe showed increased weakness. Within that context all central bankers around the world kept reinforcing the message of "higher for longer", showing less willingness to support the market without evidence of persistent inflation slowdown. Also, within the summer, in august, Fitch downgraded the credit rating of USA, thus placing enfaces on the debt sustainability of most developed countries around the world. By the end of September, the equity market experienced its worst quarter in more than a year. Higher oil prices, higher bond government yield and increased market aversion favored the portfolio positioning, skewed towards pharma and underweight consumer cyclicals. During the quarter the overweight exposure to Europe has been slightly reduced while increasing the USA market and keeping an overweight towards Japan and underweight towards China.

The fourth quarter was marked by the rising geopolitical tensions that began at the beginning of October with the start of the Israeli-Gaza war. This event prompted and reinforced the higher inflationary background. Higher energy prices, strong USA macroeconomic data, strong earning season especially for US listed companies, all pusher government bonds yield higher and the 30Y UST for the first time since 2007 breached the 5% threshold. Within the portfolio it was increased the exposure to technology and decreased the exposure to Europe and Japan.

The market action for the months of November and December completely reversed the market action of the previous 3 months. At the beginning of the November FED chairman Powell expressed satisfaction with the restriction of financial conditions and gave hint that the rate hike cycle has ended. This immediately prompted a strong rebound of technology and consumer cyclicals. The portfolio has been massively rebalanced by increasing the weight of technology and decreasing the exposure to pharmaceuticals. The exposure to USA has been increased while decreasing the exposure to Europe and Japan. The market action of November continued also into December, with a broadening of the market dept that started to positively impact the small cap components, a massive laggard in the YTD performance, therefore increasing the increase the possibility of a long term catches up of the small cap components vs the large cap. Just to remember, the whole 2023 performance of the Global equity market has been incredibly polarized in a bunch of few stocks. Just seven stocks (the so called Magnificent seven) accounted for slightly more than 40% of the whole MSCI All Country World performance.

The Sub-Fund was fully invested for both November and December, trying to fully benefit from the positive market environment.

## AZ Fund 1 - AZ Equity - Global Growth

In 2023, the US equity market had a positive dynamic, due to several concurring issues.

Even though the Federal Reserve continued to raise rates steadily until the summer, the fiscal policy continued to provide a boost to aggregate demand in 2023, with the fiscal deficit further widenings vs 2022.

This has led to a positive GDP growth, with an expansion of 2.2% and 2.1% QoQ respectively in Q1 and Q2, further accelerating to 4.9% in the third quarter. Despite the above trend economic growth and a volatile oil price, a complete recovery of global supply chains brought the shipping cost to pre-COVID levels, and this resulted in a significant disinflationary process, with US headline CPI declining steadily in the first half of the year.

The combination of quickly declining inflation and healthy GDP growth led to a rebound in the equity market, driven by Growth and Quality stocks.

In this environment, the master fund has stuck to its strategy of investing in companies with a strong competitive moat and higher than average ROI.

As a result, at the end of the year the master fund had an average cash flow yield of 3,5% and an average return on invested capital of around 22%. This approach also resulted in a greater focus on larger capitalization, that led to a lower volatility and a higher sharp ratio. In fact, the master fund had a median market cap of 360 bn \$ and a weighted average market cap of 890 bn \$ at the end of the year.

### AZ Fund 1 - AZ Equity - Global Growth (continued)

The geographical allocation was oriented 80% towards the American market, 15% for Greater Europe and 5% for the Rest of the World.

The master fund had no exposure to Chinese issuer due to the geopolitical risk.

Sector allocation remained consistent with that of the MSCI World Growth Index. The master fund remained fully invested throughout the year.

For the year 2023, the retail class of the master fund (Accumulation) achieved a performance of +40,23% (EUR) while the institutional class was up +43,02%(EUR), largely outperforming its benchmark (MSCI World Growth Net Total Return EUR) that was up +32,36%.

The alpha generation was significant and broad across the sectors, with a strong contribution from Information Technology, Communications Services, Consumer Discretionary, Healthcare and Industrials.

### AZ Fund 1 - AZ Equity - Global Healthcare

In 2023 the Sub-Fund's performance was -1.74% for class Institutional Acc Euro, and -3.5% for the class retail Acc Euro, compared to the MSCI World Net total return -13.6%.

The global equity markets in 2023 experienced a mix of challenges and opportunities. Despite some banks' failures and the fear of a recession, global stocks were able to rally thanks to the combination of a solid economy, better-than-expected corporate earnings, and an apparent end to the Federal Reserve's interest rate hikes.

From a macroeconomic perspective, inflation has cooled, and the economy remained solid despite the first-quarter regional banking crisis, which sparked fears of a credit crunch. While the Fed raised interest rates four times over the year, at their December meeting, officials signaled that no additional increases are expected, and they will likely lower rates in the coming year.

Looking at sectors, Information Technology, Communication Services, and Consumer Discretionary were the three biggest winners in 2023; this performance can be explained by positive earnings revisions of these sectors, a macro environment more resilient than expectations and the Artificial Intelligence enthusiasm, with stocks like NVIDIA and AMD seeing triple-digit gains.

On the other hand, Consumer Staples, Energy, and Utilities all closed with losses, with the latter suffering from a confluence of factors: dwindling recession fears, high treasury yields, and negative earnings revisions.

The Sub-Fund investment strategy aims to achieve long-term capital growth through exposure to companies involved in the healthcare and wellness themes. It is worth notice that this thematic focus allows us to diversify the Sub-Fund exposure across sectors, geographies and factors, allowing for a balanced exposure.

The Sub-Fund remains focused on a small number of companies (around 40), with a net exposure on average at 95%.

The geographical exposure is tilted toward US where the biggest and most innovative Medtech companies are domiciliated in. US represents 68% of the exposure, Europe 27% (o/w 7% UK), Asia at 5%.

The 2023 top three positive contributor were: Eli Lilly, Novo Nordisk and vertex.

The 2023 top three negative contributors were: Royalty Pharma, Insulet and Bayer.

### AZ Fund 1 - AZ Equity - Global Infrastructure

During the calendar year 2023, the main class of the Sub-Fund produced a return of -0.82% (unit class A, accumulation, EUR).

In 2023, markets reversed the previous year's performance, thanks to a combination of slowing inflation, which paved the way for more dovish central bank policies, and a robust US economy and labour market. After hitting 5% intraday in October, US 10y yields rebounded, ending the year at 3,88% on the back of outcomes from the December Fed meeting, which pointed to a 75bps drop-in official rates in 2024. This combined with a solid economic environment, supporting the soft-landing narrative, and fueling a rebound in the final months of the year. Swings in risk appetite and market performance during the year were driven by several factors. On one hand, tensions in the banking sector, discussions on the US debt ceiling and government shutdown, and geopolitical turmoil, particularly in Ukraine and the Middle East, contributed to volatility and uncertainty. On the other hand, strength in technology's earnings and prospects led to positive performances among mega-caps and artificial intelligence stocks, driving the major indexes higher. China faced challenges in 2023, suffering from a lackluster growth environment, along with conditions in the Chinese real estate market, negatively impacting sentiment and investment flows. Commodities were generally weak in 2023, with crude oil prices peaking in September before falling at year end.

In this context, the infrastructure asset class suffered in the central quarters of 2023, before recovering in the final months of the year also thanks to a change in expectations on rate levels for 2024.

The Sub-Fund exposure has been driven by a balanced approach among the themes believed to be structural winners, which includes exposure to digital divide, green transition, and a sound ESG footprint. That resulted in *Telecommunication Infrastructure* being the most weighted theme on average during the year, followed by *Electric Utilities*, *Renewables Energies* and *Energy*, with the latest mainly composed by north American midstream companies. In terms of sectors, Utilities were the most weighted companies in the portfolio, stable when compared to the previous year, whereas Energy and Real Estate exposure increased slightly. From a geographical perspective, the US is the most weighted area in the equity portfolio, followed by the Eurozone.

### AZ Fund 1 - AZ Equity - Global Infrastructure (continued)

During the year, average net equity exposure has been 98%, focused on 70-75 companies. Currency exposure has been mainly unhedged, with USD weighing at 57% on average.

### AZ Fund 1 - AZ Equity - Global Quality

In 2023, the MSCI ACWI Index returned +22%. The Sub-Fund delivered a strong absolute return of 18.2% (class A-AZ Fund, net), modestly lagging its benchmark.

Global markets were boosted by a strong US consumer that drove solid economic growth - despite concerns that higher interest rates and inflation could tip the economy into recession. In November, the US Treasury Department increased its issuance of short-term debt, boosting liquidity and fueling a rally. The following month, the Federal Reserve signaled an end to the rate hike cycle and penciled in three cuts for 2024, adding steam to the market. While inflation remains above target, the US exited 2023 unscathed and the prognosis for a soft landing seemed to have improved.

The European Central Bank and the Bank of England also left rates unchanged in December but continued to strike a cautious tone. European equities rebounded as economies avoided a hard landing driven by higher commodity prices, inflation, and interest rates. Outside of China, where post pandemic growth remains challenged, most emerging markets performed well.

Equity markets were narrowly focused with the Information Technology sector driving much of the gains on enthusiasm over artificial intelligence, followed by Communication Services and Consumer Discretionary.

Defensive sectors such as Utilities, Consumer Staples, and Health Care lagged substantially. Stock selection within Industrials held back relative returns along with an underweight to Information Technology. An overweight to Consumer Staples negatively impacted relative performance although selection was favorable. Overall stock selection for the strategy was positive for the year as much of the performance differential can be explained by sector allocation. Stock selection within Materials and Financials contributed to performance, along with underweights to Energy and Utilities.

In Materials, specialty gas company L'Air Liquide (France), aggregates company Vulcan Materials (US), and paint company Sherwin-Williams (US) each returned +30-40% and led our sector outperformance. Lack of exposure to Metals & Mining also aided relative returns.

In Financials, financial exchange/infrastructure companies London Stock Exchange and CME Group returned 40% and 31%, respectively, and led our outperformance. Holdings Mastercard and Visa also performed well, each gaining over 20%, while a lack of exposure to developed market banks also helped relative performance.

In Industrials, Teleperformance (France, outsourced business services) and Rentokil (UK, pest control) were the top detractors. Teleperformance shares came under pressure due to a myriad of issues including content moderation, unionization, an acquisition, and concerns over Al's potential impact. Our internal and external due diligence alleviated many of our concerns though earnings visibility had declined and we exited our position in the third quarter. Rentokil missed organic growth expectations citing a weaker macro backdrop in the US, including lower housing turnover limiting new customer acquisitions. The company has been consolidating its Terminix acquisition, which may also have been a factor. Pest control is a fairly resilient business and we believe this is likely a blip in what is an enduring business model. Nonetheless, we trimmed our shares.

Information Technology detracted due to our underweight to the strongly performing sector. The individual detractors were names we didn't have exposure to, such as Nvidia and Apple, that are index heavy weights.

Among our holdings, Constellation Software (Canada, +63%), ServiceNow (US, +82%), Adobe (US, +77%), Microsoft (US, +58%), Taiwan Semiconductor Manufacturing (+42%) and Synopsys (US, +61%) were all strong absolute and relative contributors.

### AZ Fund 1 - AZ Equity - Japan

### Segment report of J.P. Morgan Asset Management UK Ltd (until 13 April 2023):

The Japanese equity market advanced over the period. The TOPIX Index appreciated by 7.8% in JPY terms. A large part of the positive return was delivered in January, when the market was buoyed by the Bank of Japan policy meeting, where they maintained its stance on yield curve control, by the expectations for a slowdown in the pace of the FRB's interest rate hikes, and China's faster-than-expected reopening.

The portfolio slightly outperformed the benchmark over the period. Stock selection was positive, while sector allocation slightly detracted value. At the sector level, overweighting the insurance sector detracted value most, while overweighting services sector added value.

At the stock level, our long-standing high conviction Premium and Quality rated stocks, such as Keyence (sensor), Shin-Etsu Chemical (semiconductor), and Sony (technology, gaming, and entertainment) added value as they strongly outperformed the broader market. Underweighting Toyota Motor also added value, as the share price significantly lagged the benchmark return over the period.

Our overweight positions in insurance companies such as Tokio Marine and Sompo Holdings, on the other hand, detracted value as they were sold as rate-sensitive stocks, after a period of strong performance. Over the period, rate sensitive companies' shares were sold on the back of uncertainty in the financial sectors in the US and Europe.

### Segment report of AXA Investment Managers UK Ltd (until 13 April 2023):

The Japanese equity market advanced over the period. The TOPIX Index appreciated by 7.8% in JPY terms. A large part of the positive return was delivered in January, when the market was buoyed by the Bank of Japan policy meeting, where they maintained its stance on yield curve control, by the expectations for a slowdown in the pace of the FRB's interest rate hikes, and China's faster-than-expected reopening.

The portfolio slightly outperformed the benchmark over the period. Stock selection was positive, while sector allocation slightly detracted value. At the sector level, overweighting the insurance sector detracted value most, while overweighting services sector added value.

Underweighting Toyota Motor also added value, as the share price significantly lagged the benchmark return over the period.

Our overweight positions in insurance companies such as Tokio Marine and Sompo Holdings, on the other hand, detracted value as they were sold as rate-sensitive stocks, after a period of strong performance. Over the period, rate sensitive companies' shares were sold on the back of uncertainty in the financial sectors in the US and Europe.

### Report of Azimut Investments Limited (as from 14 April 2023):

Delegated on 14 April 2023, the main class of the Sub-Fund achieved a net performance of +8.81%, vs. 10.53% of the benchmark (90% MSCI Japan JPY Net Total Return (ticker: M7JPE Index) + 10% Bloomberg JPY Short Treasury 1-3 Months (ticker: I24236JP Index)).

The performance in 2023 of the equities and bonds markets marked a clear departure from 2022, with the majority of the asset classes performing better than they did in 2022 and above consensus expectations. This double-digit performance was obtained despite the highest interest rates in decades, one of the biggest bank crises in the US in March, high geopolitical risk, fueled by the tensions in the Middle East in October, and the ongoing conflict in Ukraine.

The recession fear, which was weighted in 2022, was replaced by growing confidence that US policymakers would have achieved a soft landing of the economy.

This was possible due to the resilience of the labor market, which kept consumption at a high level even with the high borrowing costs, and a slowdown in inflation.

Japanese stocks enjoy the best year in a decade, thanks to three drivers: the Tokyo Stock Exchange's push for reform at undervalued companies, Warren Buffett's trip to Japan, and a rise in acquisitions.

During the year the portfolio remained concentrated in a range of 77-85 companies, with an equity net exposure on average of 97%, using derivates assets to manage the equity exposure actively. The Active Share of the Sub-Fund was low, around 46%, as the Expected Tracking Error, which was around 1.76%, confirming blend approach which took into account the benchmark constituents and their weight. Positioning at a sector level showed an overweight Info tech and Cons Discretionary, while an underweight in Consumer Staples, and Energy.

In terms of performance attribution, the main contributors were the underweight in Cons Staple, the overweight in Industrial, and the underweight in Comm Service, while the main detractors were the underweight in Energy and Real Estate, and the overweight in Materials. At a single stock level, the main contributors were Advantest, Renesas Electronics, and Shiseido, while the main detractors were the underweight in Toyota, Mitsubishi Financial, and Shin-Etsu chemical.

At the end of the year, the main positions in the Sub-Fund in terms of absolute weight were Tokyo Electron (Info-Tech), Ana (Industrial), Nippon Steel (Materials), Kubota (Industrial), and Bridgestone (Cons Discretionary). The main overweight positions relative to the benchmark were Ana (Industrial), Nippon Paint (Materials), Tokyo Seimitsu (Healthcare), while the main underweights were: Toyota Motors (Cons Discretionary), Sony (Cons Discretionary) and Mitsubishi Financial (financial).

### AZ Fund 1 - AZ Equity - Momentum

The Sub-Fund performance in 2023 was 3.36%. The Sub-Fund equity exposure has been maintained during the year in a range between 95% and 105%, with the main use of derivatives position for hedging purposes. The 2023 momentum investments style has been characterized by a huge rotation in the first half of the year, caused by the tech market rally. For this reason, the technology sector became the most represented in the portfolio, and at the same time all defensive sectors have been drastically reduced. This deep rotation has been the main driver of the performance recover in the second half, after the suffering of the first one.

### AZ Fund 1 - AZ Equity - Small Cap Europe FoF

For the calendar year 2023 the primary unit class (A-AZ Fund) of AZ Fund 1 - Small Cap Europe FoF had a performance of +3,78%.

2023 turned out to be a very difficult market for financial markets, especially the stock market.

Forecasts of economic slowdown in growth, both in earnings and the economy, have not manifested themselves; on the contrary, consumption has shown much resilience and corporate profits have held up much better than expected.

In the face of this evidence, however, the market has rewarded large caps, and in all equity markets of developed countries the large cap equity world has outperformed the small cap world.

During the first part of the year the Sub-Fund was almost entirely invested in managers with a focus on the European area, as such not using the option to invest in managers with a focus outside the European area. The motivations were purely fundamental: European small equities were the ones with the most attractive absolute and relative valuations worldwide, and there was also a desire to take advantage of the re-opening of the Chinese economy, and as such the potential for growth in trading volume for European small cap companies, Europe being the developed area that has the most interchange with the Chinese economy.

Managers who are most heavily weighted in the portfolio, and have been so throughout the year, include a French boutique manager who takes a value approach and has strong exposure to the industrials sector. A manager focused on Nordic small caps was also heavily weighted during the first part of the year.

Only since August has a position on US small caps begun to be included again. Also beginning in August, exposure to Europe gradually began to be reduced. Several concomitant factors: on the one hand, the lack of momentum in the European economic recovery, particularly when compared with the US economy. On the other, China's economic recovery is much less strong than expected, and indeed the crisis in the real estate sector continues to weigh heavily on consumer confidence, consumption data, and corporate investment spending. In addition, inflation in Europe is showing less strong signs of slowing than in America, and as such European monetary policy seems to have reason to remain restrictive for a longer period. The combination of these factors has begun to weigh on the performance of European small caps and their earnings prospects.

Thus, by the end of September, Europe's exposure had already been reduced by almost twenty points, bringing it just below 80 percent. At the same time, the weight of US small caps increased to almost 10 percent, and exposure to Japanese small caps and Asian small caps increased.

Up to the end of October, exposure was held at just over 90 percent, but then was gradually increased during November and December, seeking to take advantage of the particularly positive market action engendered by the accommodative statements made by central bank governors, particularly Jerome Powell.

The Sub-Fund ended the year with a net exposure of about 105 percent.

### AZ Fund 1 - AZ Equity - Water & Renewable Resources

During the calendar year 2023, the main class of the Sub-Fund produced a return of +12.13% (unit class A, accumulation, EUR).

In 2023, markets reversed the previous year's performance, thanks to a combination of slowing inflation, which paved the way for more dovish central bank policies, and a robust US economy and labour market. After hitting 5% intraday in October, US 10y yields rebounded, ending the year at 3,88% on the back of outcomes from the December Fed meeting, which pointed to a 75bps drop in official rates in 2024. This combined with a solid economic environment, supporting the soft-landing narrative, and fueling a rebound in the final months of the year. Swings in risk appetite and market performance during the year were driven by several factors. On one hand, tensions in the banking sector, discussions on the US debt ceiling and government shutdown, and geopolitical turmoil, particularly in Ukraine and the Middle East, contributed to volatility and uncertainty. On the other hand, strength in technology's earnings and prospects led to positive performances among mega-caps and artificial intelligence stocks, driving the major indexes higher. China faced challenges in 2023, suffering from a lackluster growth environment, along with conditions in the Chinese real estate market, negatively impacting sentiment and investment flows. Commodities were generally weak in 2023, with crude oil prices peaking in September before falling at year end.

In the context, the *Renewables* theme suffered because of the movement in rates, adding on top to a negative sentiment on future returns, only partially reversed in the final months of the year. *Water* and *Waste* themes drove the positive performance of the sub-fund, benefiting from strong delivery, a changed macroeconomic environment and improved market sentiment when compared to the previous year.

During the year the portfolio remained concentrated in a range of 52-58 companies, with a net exposure on average of 97%. Positioning in the *Waste* and *Water* themes is core and averaged 78% of net equity investments during the year, with *Renewables* and *Energy Transition* themes close to 20% during the whole period.

The main positions in the sub-fund in terms of weights are Xylem (water infrastructure, services and solutions), Waste Management (waste services), Republic Services (waste services), Ferguson (distributor, energy transition) and Geberit (water solutions, sanitary systems).

#### AZ Fund 1 - AZ Equity - World Minimum Volatility

In 2023 the Sub-Fund performance was 0.73%. Average net equity exposure was between 92% and 100%. In terms of geographic breakdown, the most weighted areas were the United States (73%), followed by Japan and Europe (both 11%), and Asia (4%). The investment approach has always followed preferences for stocks having stable high-quality business models and strong pricing power, to optimize the overall risk of the portfolio. As a result, the most weighted sectors were healthcare, information technology (not growth tech, but old tech) and communication services, which have reported stable top lines and low volatility stock prices in the last years. Portfolio hedging positions have been put in place using NASDAQ and S&P 500 options.

### AZ Fund 1 - AZ Islamic - Global Sukuk

AZ Fund 1 - AZ Islamic - Global Sukuk is a feeder fund of AZ Multi Asset - AZ Islamic - MAMG Global Sukuk (the "master fund"). The following commentary is a review of the performance of the master fund:

Winston Churchill said, "Success is not final, failure is not fatal: it is the courage to continue that counts.".

That statement summarizes the year 2023 for investors in just a few words. 2023 was another memorable year for most market participants and investors, but for different reasons. The most used words during the year were: American Dream, War, Inflation, Recession, Bank failures, Fed pivot and one which is now pertinent to our part of the world "BRICS".

After a difficult 2022, 2023 was relatively kind to portfolios leading to double digit returns in many sectors across geographies. Despite the cooling down of the risk-on stance during summer, we saw bumper movements in the last two months of the year as declining inflation led investors to grow increasingly excited about a soft landing. That then got further momentum in December, particularly after the Federal Reserve signalled 75bps of rate cuts for 2024.

Developed market equities delivered over 24.4%, while within developed market equities, NASDAQ, which fell sharply last year bounced back strongly, returning over 55% with a swooping rally witnessed in the MEGA Tech stocks (+107%) fuelled by AI expectations.

On the other side of the spectrum, the rollercoaster ride witnessed in the fixed income markets continued to get extended by leaps and bounds. After being hit hard last year, treasuries have delivered 4.1% during the year, while European govies were up around 7.1%. Global IG bonds were up around 9.6%, while emerging market debt was up 10.5%. US High Yield remained an outperformer at 13.5%. Commodities, which were last year's star performer, gave up some of those gains in 2023, down 4.8%. This means 2022's worst performing asset, growth stocks, has been 2023's best performing asset and 2022's best performing asset, commodities, has been 2023's worst performing asset.

The Federal Reserve announced four rate hikes in the year of 25bps each (highest point since 2007) marking a slowdown in intensity and pace compared to 2022 and then started sounding dovish in December. The Bank of England (BoE hereafter) approved five rate hikes of 50bps, 25bps, 25bps, 50bps and 25bps respectively. The European Central Bank remained more hawkish initially by comparison and hiked rates six times in 50bps increments at first and then 25bps each. The US 10-year yield rose to 4.98% during the year (Oct 2023), made lows of 3.30% (March 2023) and finally ended flat at 3.88%, while the two-year displayed whimsical behaviour too, making highs of 5.22%, lows of 3.76% and ending at 4.25%. Expectations for the path of monetary policy saw major shifts this year with rapidly changing expectations, markets pricing cuts in the latter half of 2024 instead of 2023.

In the near future, we expect growth to moderate, while inflation expectations are also expected to continue to trend down with bumps on the way. Consequently, we expect US Treasuries yields to decline over the next two quarters. In our view, the magnitude of the Federal Reserve hikes witnessed in the last few years are not expected to be a significant headwind in 2024 even if US inflation stays slightly higher than FED's inflation target. However, we see limited scope for rapid rate-cuts currently priced by markets. Geopolitical risks are expected to continue to hover in the background which could disrupt global supply chains and elevate commodity risk premia in bouts. These factors in turn could act as a floor on inflation which could potentially derail policy easing actions anytime soon.

In the Gulf Cooperation Council region (GCC region hereafter), 2023 continued to reflect strength in their economies despite the weakness witnessed in oil prices during the year. The bonds generated a positive performance of 6.22% due to their carry and the positive impact of their high correlation to global interest rates in the latter half of the year, reflecting the persistent strong technical demand for the region. (The spread tightened slightly from 121bps to 117.7bps during the year).

Outstanding sukuk volumes expanded by more than 10.3% and crossed USD 850 billion, despite volatilities and geopolitical triggers, with the market expected to cross USD1 trillion in the medium term, with sovereigns being the key issuers namely, Saudi Arabia. Both outstanding and issued sukuk continued to hold around 30% of the total funding mix in core markets. We would like to highlight that only 0.21% of all issued sukuk have defaulted and sukuk recovery still remains untested in most Islamic finance markets.

In the context of the global financial landscape, the Dow Jones Sukuk Total Return Index registered a total return of 5.53% over the course of the year. While the Sub-Fund also delivered a commendable performance surpassing peers, by registering a remarkable gain of 5.31%. This impressive performance underscored the effectiveness of our fund's investment strategy and its ability to generate superior returns for our investors.

The Sub-Fund's fundamental beliefs remained unchanged in 2023. The strategy maintained an average IG credit rating while maintaining the diversification of the portfolio, which still contains more than 100 issuances. The short duration skewed laddered investment strategy, along with the active overweights in High Yield over Investment Grade versus the benchmark proved to be a key catalyst for our performance.

### AZ Fund 1 - AZ Islamic - Global Sukuk (continued)

Employing a core and satellite investment strategy, the Sub-Fund maintains a substantial overweight position in the UAE. The UAE is designated as a core allocation due to our enduring positive outlook on the country's fundamentals, even in the face of oil price volatility since 2014. The Sub-Fund also benefited from its active weight in AT1 issuances of regional banks. GCC region financial institutions boast robust capitalization ratios, ample asset buffers, and strong asset quality, making them an attractive prospect for investments within our portfolio. During the March 2023 Credit Suisse banking crisis, the regional banks AT1s, outperformed global peers further underlining our core belief in the strength of the sector.

With regards to our macro calls, we increased our duration exposure to 3.6 during the year from 2.9 at the start of the year, which helped us participate in the duration rally in the latter half of the year. Performance was further supported by some of our idiosyncratic credit investment calls.

The Board of Directors, Luxembourg, 24 April 2024

## Independent auditor's report

To the Unitholders of AZ Fund 1

## Opinion

We have audited the financial statements of AZ Fund 1 (the "Fund") and of each of its sub-funds, which comprise the statement of net assets, the statement of changes in the number of units, the securities portfolio and financial derivative instruments as at 31 December 2023 and the statement of operations and changes in the net assets for the year then ended, and the notes to the financial statements, including a summary of significant accounting policies.

In our opinion, the accompanying financial statements give a true and fair view of the financial position of the Fund and of each of its sub-funds as at 31 December 2023, and of the results of their operations and changes in their net assets for the year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

### **Basis for Opinion**

We conducted our audit in accordance with the Law of 23 July 2016 on the audit profession (the "Law of 23 July 2016") and with International Standards on Auditing ("ISAs") as adopted for Luxembourg by the "Commission de Surveillance du Secteur Financier" ("CSSF"). Our responsibilities under the Law of 23 July 2016 and ISAs as adopted for Luxembourg by the CSSF are further described in the "responsibilities of the "réviseur d'entreprises agréé" for the audit of the financial statements" section of our report. We are also independent of the Fund in accordance with the International Code of Ethics for Professional Accountants, including International Independence Standards, issued by the International Ethics Standards Board for Accountants ("IESBA Code") as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements, and have fulfilled our other ethical responsibilities under those ethical requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

### Other information

The Board of Directors of the Management Company is responsible for the other information. The other information comprises the information included in the annual report but does not include the financial statements and our report of the "réviseur d'entreprises agréé" thereon.

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report this fact. We have nothing to report in this regard.

## Responsibilities of the Board of Directors of the Management Company for the financial statements

The Board of Directors of the Management Company is responsible for the preparation and fair presentation of these financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors of the Management Company determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors of the Management Company is responsible for assessing the Fund's and each of its sub-funds' ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of the Management Company either intends to liquidate the Fund or any of its sub-funds or to cease operations, or has no realistic alternative but to do so.

## Responsibilities of the "réviseur d'entreprises agréé" for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue a report of the "réviseur d'entreprises agréé" that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or
  error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is
  sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material
  misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve
  collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that
  are appropriate in the circumstances, but not for the purpose of expressing an opinion on the
  effectiveness of the Fund's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Management Company.

- Conclude on the appropriateness of Board of Directors of the Management Company use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Fund's or any of its sub-funds' ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our report of the "réviseur d'entreprises agréé" to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our report of the "réviseur d'entreprises agréé". However, future events or conditions may cause the Fund or any of its sub-funds to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the financial statements, including the
  disclosures, and whether the financial statements represent the underlying transactions and events in a
  manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Ernst & Young Société anonyme Cabinet de révision agréé

Cosimo Ruggiero

#### Notes to the Financial Statements as at 31 December 2023

#### Note 1. General information

AZ Fund 1 (the "Fund") is an umbrella Mutual Investment Fund established under Luxembourg law, pursuant to section I of Luxembourg Law dated 17 December 2010 relating to Undertakings for Collective Investment, and subsequent amendments (hereinafter the "Law"). The Fund was created in accordance with fund management regulations (the "Management Regulations") approved on 4 February 2000 by the Board of Directors of Azimut Investments S.A. (the "Company") and published in the *Mémorial Recueil des Sociétés et Associations* on 13 March 2000, after having been filed with the Registrar of the District Court of Luxembourg on 28 February 2000, then replaced by the latest version dated 14 January 2021.

As at 31 December 2023, the Sub-Funds listed below are open to subscription.

Units are issued as registered units. These types of units are distinguished either by commission rates, by their subscription terms, by the currency, or by the income distribution policy, as detailed in the Prospectus.

#### Note 3. Significant accounting principles

The Fund's financial statements are prepared in accordance with the regulations in force in Luxembourg regarding Undertakings for collective investment.

#### a) Combined statements for the Fund

AZ Fund 1 (combined) financial statements are expressed in EUR and correspond to the total of the financial statements of the Sub-Funds that if denominated in currencies other than EUR, have been converted in EUR at the exchange rate as at 31 December 2023.

#### b) Currency translation

At the closing date, securities valuation (determined as described below), receivables, bank deposits and debts denominated in a currency other than the Sub-Fund's currency are converted into the Sub-Fund currency at the exchange rate prevailing on that date. Exchange differences arising from the translation of receivables, bank deposits and debts shall be included in the net foreign exchange result of the financial period recorded in the Statement of Operations and Changes in Net Assets under the item Net realised gain / (loss) on foreign currencies transactions.

#### c) Valuation of assets

The valuation of assets and commitments of each Sub-Fund shall be carried out as follows:

- 1) the value of liquidity held in cash or in deposits, directly payable securities and payables, advance payments, dividends, profits and/or interest due but not yet received, shall be composed of the par value of the entries, unless it is unlikely that they will be actually received. In this case, the value shall be established by subtracting the amount deemed appropriate to reflect the real value of the assets;
- 2) the valuation of securities and money market instruments listed or traded on a regulated market, which operates regularly, is recognised and open to the public, is based on the last-known price of the last business day. If a transferable security or money market instrument is traded on more than one market, the valuation is based on the last known price of the main market for that security or instrument. If the last known price is not representative, the valuation shall be based on the likely net breakup value, estimated prudentially in good faith by the Company;
- 3) transferable securities and money market instruments not listed or traded on a regulated market which operates regularly, is recognised and open to the public, will be valued based on the likely net breakup value, prudentially estimated in good faith by the Company;
- 4) units of undertakings for collective investment are valued based on the last Net Asset Value available;
- 5) assets expressed in a currency other than the base currency of the Sub-Fund in question shall be converted at the last available exchange rate;
- 6) all other assets shall be valued based on the likely net breakup value, which must be estimated with due care and in good faith by the Company.

#### d) Forward foreign exchange contracts

The forward foreign exchange contracts represent obligations of purchase or the sale of foreign currency on the basis of future exchange rates determined at a fixed price at the time of conclusion of the contracts. The unexpired forward foreign exchange contracts are valued at the last "forward" rate available on the valuation dates or at the balance sheet date and unrealised gains or losses are recorded. Realised gains / (losses) and the resulting changes in unrealised gains or (losses) are included in the Statement of Operations and Changes in Net Assets.

#### e) Options

A purchaser of a put option has the right, but not the obligation, to sell the underlying instrument at an agreed upon strike price to the option seller. A purchaser of a call option has the right, but not the obligation, to purchase the underlying instrument at the strike price from the option seller.

Premiums paid by the Sub-Fund for purchased options are included in the statement of net assets as an investment. The option is adjusted daily to reflect the current market value of the option and the change is recorded as unrealised appreciation or depreciation.

Options traded on a regulated market are valued with their last available closing price. Options which are not listed on an official stock exchange (OTC options) are valued at their estimated fair value as determined by the Company in accordance with the Law and the Company's pricing policy.

#### f) Futures contracts

Futures contracts provide for delayed delivery of the underlying instrument at a fixed price or for a cash amount based on the change in the value of the underlying instrument at a specific date in the future. Upon entering into a futures contract, the Sub-Fund is required to deposit with the broker, cash or securities in an amount equal to a certain percentage of the contract amount which is referred to as the initial margin account. Subsequent payments, referred to as variation margin, are made or received by the Sub-Fund periodically and are based on changes in the market value of open futures contracts.

Futures contracts are valued based on the last available market price. Realised and unrealised gains and losses are included in the Statement of Operations and Changes in Net Assets. For the calculation of net investments in financial instruments by currency, investments are converted at the exchange rate prevailing at the end of the period. Realised gains / (losses) and the resulting changes in unrealised gains or (losses) are included in the Statement of Operations and Changes in Net Assets.

#### Note 3. Significant accounting principles (continued)

#### g) Contracts for Difference (CFD)

A CFD is essentially a contract between the investor and the investment bank or a company carrying out spread-betting. At the end of the contract, the parties exchange the difference between the opening and closing rates of a determined financial instrument, including the shares or the merchandise. The disclosed positions in the CFD portfolios are the net amounts between long and short positions.

The valuation of a CFD shall reflect at all times the difference between the latest known price of the underlying security and the valuation that was taken into account when determining the transactions. Realised gains / (losses) and the resulting changes in unrealised gains or (losses) are included in the Statement of Operations and Changes in Net Assets.

The caption "Receivable on Contract for Difference" includes the income on CFD positions and the receivable amounts on transactions on CFD. The caption "Payable on Contract for Difference" includes payable fees on CFD positions and payable amounts on transactions on CFD.

#### h) Variance swap

A variance swap is a bilateral agreement in which each counterparty agrees to exchange cash flows based on the measured variance (or volatility for volatility swaps) of a specified underlying asset. One party agrees to exchange a "fixed rate" or strike price payment for the "floating rate" or realised price variance on the underlying asset with respect to the notional amount. At the maturity date, a net cash flow is exchanged, where the payoff amount is equivalent to the difference between the realised price variance of the underlying asset and the strike price multiplied by the notional amount.

Variance swaps are valued at their fair value based on the last known closing price of the underlying security. Realised gains / (losses) and the resulting changes in unrealised gains or (losses) are included in the Statement of Operations and Changes in Net Assets.

There were no Variance Swap open as at 31 December 2023.

#### i) Interest Rate Swap contracts (IRS) and Inflation Linked Swap (ILS)

An Interest Rate Swap is a bilateral agreement in which each party agrees to exchange a series of interest payments for another series of interest payments on the basis of a notional amount serving as the basis of calculation that is generally not exchanged.

An Inflation Linked Swap is is a bilateral agreement in which each party agrees to swap floating rate linked to an inflation index (realized inflation) to fixed rate coupon in the same currency.

Realised gains / (losses) and the resulting changes in unrealised gains or (losses) are included in the Statement of Operations and Changes in Net Assets under item Swaps.

#### j) Credit Default Swap (CDS)

A Credit Default Swap is a credit derivative transaction in which two parties conclude an agreement by which one party makes a periodic fixed-coupon payment to the other party for a specified term in exchange for a payment subordinate to a credit event associated with the underlying reference obligation.

Realised gains / (losses) and the resulting changes in unrealised gains or (losses) are included in the Statement of Operations and Changes in Net Assets under item Swaps.

#### k) Total Return Swap (TRS)

A Total Return Swap contract is a bilateral agreement in which each party agrees to exchange payments based on the performance of an underlying instrument (security, commodity, index,..) thereof for a fixed or variable rate. The total performance will include gains and losses on the underlying, as well as any interest or dividend during the contract period according to the type of underlying. The risk with this type of contract lies in the fact that the profits of each counterpart depend on the performance of the underlying asset, which is unknown when the contract is signed.

Realised gains / (losses) and the resulting changes in unrealised gains or (losses) are included in the Statement of Operations and Changes in Net Assets under item Swaps.

#### I) Reverse Repurchase Agreements

Reverse repurchase agreements are classed as lending transactions secured by underlying securities. These are transactions in which the seller transfers ownership of securities to another person (the buyer), and in which the seller and the buyer respectively and irrevocably undertake to repurchase and return the securities at a specified price and date. The Fund acts as the assignee in these transactions.

Reverse repurchase transaction ("Repo") is a security sale transaction for securities with the commitment by the seller to repurchase the same security as that sold at a specified price at a future date. A reverse security sale transaction ("Reverse Repo") is the same transaction from the purchaser's standpoint. By approval, whether the transaction is called purchase of title to repurchase or sale if title to repurchase is determined by considering the transaction from the standpoint of the reseller.

There were no open reverse repurchase agreements as at 31 December 2023.

#### Note 3. Significant accounting principles (continued)

#### m) Income

Bank and bond interests are recorded pro rata temporis. Dividends are recorded on the execution date net of withholding taxes. Other income mainly includes repayment fees and exceptional financial profit.

#### n) Investment in other Sub-Funds in other funds of the same management company

A Sub-Fund of the Fund may invest in units of other UCITS and/or other UCIs managed by the same management company or by any other company to which the Management Company is tied within the frame of either a shared control or management, or direct or indirect significant equity investment. The management company or any other company cannot bill any subscription rights or redemption fees for the investment of UCITS in units of other UCITS and/or other UCIs.

#### o) Securities lending

The Sub-Funds may lend securities included in their portfolio to a borrower. To guarantee this transaction, the Sub-Fund receives collateral. Securities on loan are delivered to a third party broker, the assets lent continue to be valued as part of the portfolio of the Sub-Fund. Upon termination of a loan, the Sub-Fund is required to return to the borrower the posted collateral. Loans are subject to termination by the Sub-Fund or the borrower at any time.

Securities lending generates additional income for the Sub-Funds. This remuneration is accounted for in the Statement of Operations and Changes in Net Assets under items Securities lending income or Securities lending expense.

#### Note 4. Investment in other Sub-Funds of the same Fund (Cross-investments)

A Sub-Fund can subscribe, acquire and/or hold securities to be issued or issued by one or more other Sub-Funds of the Fund. These activities are performed under the law of 17 December 2010, as amended, concerning Undertakings for Collective Investment, which provides for the following requirements:

- 1) the target Sub-Fund does not invest in turn in the Sub-Fund that has invested in this target Sub-Fund; and
- 2) the part of assets that the target Sub-Funds being acquired may invest overall in units of other target Sub-Funds of the Fund does not exceed 10%, according to its investment strategy as defined in the prospectus.

As at 31 December 2023, the total amount of cross-investments was EUR 413,384,218.82. Eliminating the effect of the cross-investments, the combined net assets of the Fund would be equal to EUR 22,528,391,303.29.

#### Note 5. Management fees (continued)

If applicable, fees paid to the Investment Manager and/or Investment Adviser of the Sub-Fund are included in the Management fees.

(A) The Sub-Fund management fee is:

for the first year: 0.8% for the second year: 1.1% for the third year: 1.4% for the fourth year: 1.7% from the fifth year: 1.8%

(B) The Sub-Fund management fee is:

for the first year: 1.4% for the second year: 1.7% from the third year: 1.8%

For the Sub-Funds AZ Fund 1 - AZ Allocation - PIR Italian Excellence 30%, AZ Fund 1 - AZ Allocation - PIR Italian Excellence 70%, AZ Fund 1 - AZ Bond - Hybrids\*, AZ Fund 1 - AZ Equity - Global Quality and AZ Fund 1 - AZ Equity - Japan, a service fee amounting to a maximum of 0.15% of the Sub-Fund's net assets is payable to the Management Company on an annual basis.

For the Sub-Funds AZ Fund 1 - AZ Allocation - PIR Italian Excellence 30% and AZ Fund 1 - AZ Allocation - PIR Italian Excellence 70%, a service fee of 0.20% is payable to the 0.35 on the Sub-Fund's net assets for the unit class AP - AZ Fund (ACC) exclusively.

For the Sub-Fund AZ Fund 1 - AZ Alternative - Capital Enhanced, a service fee amounting to a maximum of 0.12% of the Sub-Fund's net assets is payable to the Management Company on an annual basis.

Service fees are included in the Statement of Operations and Changes in Net Assets under the item Administration fees.

#### Note 6. Variable management fees

A variable management fee is applied to symmetrically (linearly) increase or decrease the management fee. The increase or decrease is capped at 20% of the management fee amount and is based on how well the Unit Class performs ("Performance of the Unit Class") against the Reference Index ("Performance of the Reference Index") over the same Performance Period (this is known as a "fulcrum" fee).

If the Unit Class outperforms its Reference Index ("Outperformance") over the same Performance Period, the management fee increases on a linear basis within a pre-specified Range (defined below), up to a maximum of 20%. If the Unit Class underperforms its Reference Index ("Underperformance") over the same Performance Period, the management fee decreases on a linear basis within a pre-specified Range (defined below) up to a maximum of 20%.

When the Performance of the Unit Class is equivalent to that of the Reference Index over the same Performance Period, the management fee is not adjusted.

The Company defines an Outperformance and Underperformance Range for each Sub-Fund (the "Range"). The management fee goes up or down on a linear basis, by up to 20%. The Range for each Sub-Fund depends on its expected volatility: the higher the volatility, the higher the potential Outperformance or Underperformance. The Ranges may vary from "-1% to 1%" to "-5% to 5%". For example, for a Range of "-5% to 5%", the maximum (minimum) management fee is payable if the performance of the Unit Class exceeds (falls short of) the performance of the Reference Index by five percentage points over the Performance Period. For a Range of "-1% to 1%", the maximum (minimum) management fee is payable if the performance of the Unit Class exceeds (falls short of) the performance of the Reference Index by one percentage point over the Performance Period. For Hedged Units, the Hedging Costs are added to the Reference Index.

Details regarding the Reference Index and the Range applicable to each Sub-Fund are disclose in the relevant Prospectus of the Fund.

The Performance Period is a rolling 3-month period. The variable management fee and resulting change in the management fee are calculated on each Valuation Day and accrue with the Net Asset Value of the Unit Class in question. The variable management fee crystallises at the end of each calendar month. When Outperformance is recorded, the management fee payable by a Sub-Fund increases by the amount of the applicable variable management fee. In the event of Underperformance, the management fee payable by a Sub-Fund decreases by the amount of the applicable variable management fee. During the first two calendar months following the launch of a Unit Class, the management fee is accrued in the Net Asset Value of the Unit Class and paid on a monthly basis, without being adjusted by a variable management fee. The management fee is adjusted by the variable management fee (if any) from the third calendar month following the launch date of a Unit Class.

#### Note 6. Variable management fees (continued)

The performance of Unit Classes is calculated as the difference between the Net Asset Value net of expenses (excluding the accrued variable management fee and any income distribution (dividends) that may have been made) of the Unit Class at the end of the Performance Period and the Net Asset Value net of expenses (excluding the accrued variable management fee and any income distribution (dividends) that may have been made) of the Unit Class at the beginning of the Performance Period. The Performance of the Reference Index is calculated as the difference between the value of the Benchmark at the end of the Performance Period and at the beginning.

A variable management fee may be applied for Outperformance, even when the Sub-Fund performance is negative. Further details on the additional variable management fee can be found in Note 4 of the Additional Information (Unaudited).

#### Note 7. Distribution fees and Promotion fees

In accordance with the prospectus of the Fund, unit classes may be charged a distribution fee up to a monthly maximum of 0.053% of the net assets.

Since 1 April 2022, the Management Company receives also a promotion fee, of no more than the equivalent of 60% of its management fee to remunerate the distributors and other intermediaries involved in distribution activities. Promotion fees are included in the Statement of Operations and Changes in Net Assets.

#### Note 8. Depositary fees

The depositary bank receives an annual fee of 0.065% of the Fund's net assets. This fee may differ from that effectively applied to each individual Sub-Fund according to its net assets. The depositary bank also receives a fee per transaction ranging from EUR 5 to EUR 140 depending on the type of transaction with a minimum of EUR 500 per month and per Sub-Fund. Depositary fees are included in the Statement of Operations and Changes in Net Assets.

#### Note 9. Administration fees

Until 14 January 2023: The Management Company receives a maximum annual fee of 0.33% of the net assets of the Fund for the administrative and organisational services it and BNP Paribas, Luxembourg Branch, renders to the Fund.

As of 15 January 2023: The Management Company receives a maximum annual fee of 0.35% of the net assets of the Fund for the administrative and organisational services it and BNP Paribas, Luxembourg Branch, renders to the Fund.

In addition, administration fees include the investment consultancy expenses, bank expenses (securities administration fees, unitholder Management fees), and all other general administration expenses. The annual rate of general administration fees is 0.01% with a minimum of EUR 1,250 per month and per Sub-Fund. For the preparation of the annual and semi-annual reports in the language of the prospectus, a fee of EUR 5,700 per annum is charged for the first five Sub-Funds. For any new additional Sub-Fund, a fee of EUR 350 per year is charged.

#### Note 10. Taxe d'abonnement

The Fund is subject to the "taxe d'abonnement" (subscription tax), which is calculated and paid quaterly, on the basis of the Net Asset Value at the end of the quarter. The tax rate amounts to 0.01% p.a. for Unit classes open exclusively to institutional investors and 0.05% p.a. for other Units.

This tax is reduced to 0% on the value of assets represented by Units held in other Luxembourg UCI that have already been subject to the subscription tax.

#### Note 11. Transaction costs

As at 31 December 2023, transaction costs posted in the Statement of Operations and Changes in Net Assets include costs for purchase and sale of shares, options, futures, swaps, forward foreign exchange contracts, CFD and UCI. For bonds, transaction expenses are included in the transaction cost

#### Note 12. Exchange rates as at 31 December 2023

The following exchange rates were used to translate the investments and other assets and other liabilities denominated in currencies other than the base currency of the Sub-Funds at 31 December 2023:

1 USD =	0.784457	GBP	(British Pound)	1 USD =	1.000000	USD	(United States Dollar)

### Note 13. Master-Feeder Structure

In accordance with the conditions defined by Luxembourg law and regulations, the Fund's Sub-Funds may qualify as feeder UCITS ("the Feeder") or as a master UCITS (the "Master"). A Feeder shall invest at least 85% of its net assets in securities of the same Master UCITS or Sub-Fund of an UCITS. An existing Master or Feeder can be converted into a standard Sub-Fund which is neither a Feeder UCITS nor a Master UCITS. A feeder can replace the Master UCITS with another Master UCITS. If it qualifies as Feeder, this shall be specified in the Sub-Fund description included in the relevant prospectus.

The Feeder and the Master sub-funds are managed by the same Management Company. In this respect, the Management Company has also implemented specific internal policies relating to the Feeder and the Master, in accordance with the provisions of the 2010 Law.

These policies describe in particular i) the bases for the redemption, subscription and repayment of Units as well as their suspension, and (ii) the coordination procedures for the calculation timetable and publication of the net asset value.

As at 31 December 2023, the following Sub-Funds are part of a "Master-Feeder Structure" as defined in article 77-86 of the Law of 17 December 2010, as amended.

Feeder Fund	Master Fund
AZ Fund 1 - AZ Bond - Frontier Markets Debt	AZ Fund 3 - AZ Bond - Frontier Markets Debt
AZ Fund 1 - AZ Equity - AI Mal MENA	AZ Fund 3 - Al Mal MENA Equity
AZ Fund 1 - AZ Islamic - Global Sukuk	AZ Multi Asset - AZ Islamic - MAMG Global Sukuk

#### Note 13. Master-Feeder Structure (continued)

Feeder - Sub-Fund	Feeder - Market value in USD		
AZ Fund 1 - AZ Bond - Frontier Markets Debt	31,810,484.11	100,226,209.34	31.74%
AZ Fund 1 - AZ Equity - AI Mal MENA	4,453,297.92	75,708,151.08	5.88%
AZ Fund 1 - AZ Islamic - Global Sukuk	104,888,120.52	736,554,534.79	14.24%

The MASTER (USD) unit class of the Master in which the Feeder invests does not bear any subscription or redemption fees, Management fees or additional Variable management fees. The MASTER (USD) unit class of the Master in which the Feeder invests bears all ongoing charges charged to the Master on a pro-rata basis. These are namely custodian bank fees, fees related to central administration and the fees charged by the Master's independent auditor. Total fees borne by the MASTER (USD) unit class of the Master are expected to amount to 0.42% of average net assets. Total fees combined of the Feeder and of the Master, excluding the variable management fee, shall not exceed 5% of the Sub-Fund's average net assets.

	Feeder -	Feeder -	Master	Master -
	Total expenses	% Charges	- Total expenses	% Charges
Feeder - Sub-Fund	in USD	_	in USD	_
AZ Fund 1 - AZ Bond - Frontier Markets Debt	669,859.80	1.98%	1,126,900.94	1.12%
AZ Fund 1 - AZ Equity - Al Mal MENA	128,724.26	2.83%	1,463,636.95	1.93%
AZ Fund 1 - AZ Islamic - Global Sukuk	2,965,238.16	2.80%	9,447,525.96	1.28%

Investors may obtain free copies of the prospectus, the policies governing the relationship between the Feeder and the Master, and annual report of the Master at the registered office of the Management Company.

The Feeder may invest up to 15% of its assets in one or more of the following items:

- ancillary liquid assets (to a limited extent), pursuant to the second sub-paragraph of article 41 paragraph 2 of the 2010 Law, and
- financial instruments which may be used only for hedging purposes in accordance with the relevant provisions of article 41(1)(g) and article 42 (2) and (3) of the 2010 Law.

#### Note 14. Management fee rates

Management fees are also applicable to investments held by the Sub-Funds in underlying investment funds. These Management fees are charged at different rates, but do not exceed 2% of the average daily net assets for an individual underlying investment fund.

#### Note 15. Distributions

In terms of the Sub-Funds income distribution, the Management Company decides on the use of Fund returns based on the accounts relevant to every reference period. It may decide to either capitalise the income or distribute all or part of the income.

The Management Company reserves the right to keep funds available to compensate for any capital loss. The Board of Directors of the Management Company may distribute an interim dividend, within the limits provided by law. Therefore, the Management Company shall either distribute investment returns, or decide to distribute the capital, within the limits provided by law. Dividends and interim dividends shall be paid at a time and place established by the Board of Directors of the Management Company, net of any tax, if due.

Dividends and interim dividends distributed but not collected by the investor within five years of payment date are no longer payable to investor and shall be paid to the corresponding Sub-Fund.

No interest will be paid on the announced dividends and held by the Depositary bank for the investors of the Sub-Fund concerned.

## Note 15. Distributions (continued)

Distributed amounts for the year ended on 31 December 2023 are detailed below:

20/12/2027	500 bps	Sell	5.000	20/12/2027	50,000,000.00	(4,861,355.27)	JP Morgan Securities Plc

#### Note 20. Placement fees

For D-AZ Fund (DIS) Units of the AZ Fund 1 - AZ Allocation - Target 2023 Equity Options\* Sub-Fund, a one-off investment fee is applied and charged at once at the closing date of the Investment Period (as will be defined by the Management Company) at a rate of 3.50% on globally collected capital. It is then amortised in a straight line over 4 years by means of a payable amount on net total value for the concerning units at each net asset value calculation date.

For D-AZ FUND (DIS) units of the AZ Fund 1 - AZ Bond - Sustainable Hybrid Sub-fund, a one-off investment fee is applied and charged at the closing date of the Investment Period (as will be defined by the Company) at a rate of 1.50% on globally collected capital. It will then be amortised in a straight line over 3 years by means of a payable amount on net total value of said units at each net asset value calculation date.

Placement fees are included in the Statement of Operations and Changes in Net Assets under the item Amortisation of Placement Fees. There were no placement fees as at 31 December 2023.

#### Note 21. Money Market Funds Regulation

As at the date of this report, none of the Sub-Funds of the Fund is a "Money Markets Fund" in the sense of Regulation (EUR) 2017/1131 of the European Parliament and the Council on money market funds, nor is it currently planned to obtain this status for any of the Sub-Funds in the future.

<sup>\*</sup> See Note 1 for further details.

### Note 22. Unrealised appreciation / (depreciation) of financial derivative instruments per counterparty

#### Note 3. Securities Financing Transaction Regulation (SFTR)

The Fund uses securities lending and borrowing transactions as referred to in Regulation (EU) 2015/2365 on transparency of securities financing transactions and of reuse and amending Regulation (EU) No 648/2012 ("SFTR"), subject to the investment restrictions and within the ranges set out in Appendix VI of the Prospectus. The Fund does not use other securities financing transactions covered by SFTR (i.e. repurchase transactions, buy-sell back transactions or sell-buy back transactions and margin lending transactions). In accordance with Article 13 of the Regulation, information on Total Return Swaps and securities lending are detailed below.

#### 1. Total Return Swaps (TRS)

#### a) Global data

The market exposure in Total Return Swap contracts are disclosed in Note 18.

#### b) Concentration data

The market value of the non-cash collateral (if any) sorted by Sub-Fund and country of issuer as of 31 December 2023 are disclosed in the Collateral table

There are no non-cash collateral received in respect of Total Return Swaps.

#### c) Concentration data by fund and type of collateral

All counterparties for the Total Return Swaps at the reporting date are shown in the Collateral table.

#### d) Aggregate transaction data

#### Type and quality of collateral

The Collateral table reflects the absolute market value, sorted by Sub-Fund of all collateral received and loaned, including the type and quality of collateral as at 31 December 2023.

#### Maturity tenor

The Collateral table reflects the absolute market value in EUR of all collateral received and on loan by tenor maturity for each type of SFT and swaps as of 31 December 2023.

#### Currency of the collateral

The Collateral table reflects the absolute market value in EUR sorted by Sub-Fund and the currency of all collateral received and on loan for each type of SFT and swaps as of 31 December 2023.

The currency of the Total Return Swap contracts at the reporting date is shown in Note 18.

#### Country in which the counterparties are established

The following table reflects the countries and counterparties as at 31 December 2023.

Counterparties	Country
BNP Paribas	France
Citigroup Global Market Ltd Goldman Sachs International Morgan Stanley International	Germany Great Britain Great Britain

### e) Data on reuse of collateral

Collateral received in respect of Total Return Swap contracts cannot be sold, reinvested or pledged.

### f) Safekeeping of collateral received by the collective investment undertaking as part of SFTs and Total Return Swaps

The name of custodians and amount of collateral received by each Sub-Fund are disclosed in the Collateral table.

#### g) Safekeeping of collateral granted by the collective investment undertaking as part of SFTs and Total Return Swaps

The name of custodians and amount of collateral granted by each Sub-Fund are disclosed in the Collateral table.

### Note 3. Securities Financing Transaction Regulation (SFTR) (continued)

### 1. Total Return Swaps (TRS) (continued)

### h) Data on return and cost for each type of SFTs and Total Return Swaps

The following table reflects the net unrealised result for each type of SFTs and Swaps and their counterparties as at 31 December 2023.

#### Country in which the counterparties are established

The following table reflects the countries and counterparties as at 31 December 2023.

Counterparties	Country
Bank of Nova Scotia London Branch Triparty	Canada
Barclays Bank PLC Fixed Income JPM Triparty	Great Britain
Barclays Bank PLC Fixed Income Triparty	Great Britain
BNP Paribas Arbitrage Triparty	France
BNP Paribas Paris Triparty	France
BNP Paribas-Securities Services JPM Triparty	France
Credit Agricole Corporate and Investment Bank JPM Triparty	France
HEALTHCARE OF ONTARIO PENSION PLAN TRUST FUND Trip.	Canada
HSBC Bank PLC Triparty	Great Britain
Mizuho International plc Triparty	Great Britain
Morgan Stanley & Co International PLC Fixed Income Triparty	Great Britain
Morgan Stanley & Co International PLC Triparty	Great Britain
NATIXIS 2 Triparty	France
RBC Dominion Securities JPM Triparty	Canada
The Toronto-Dominion Bank Triparty	Canada
UBS AG JP Morgan Triparty	Switzerland

#### Settlement and clearing

Tri-party for all counterparties and transactions.

#### d) Data on reuse of collateral

The fund does not reuse any collateral received.

#### e) Safekeeping of collateral received by the collective investment undertaking as part of securities lending transactions

All collateral received in relation to the fund's securities lending transactions are safekept by BNP Paribas, Luxembourg Branch.

#### Note 4. Performance fees according to ESMA

The following table details the variable management fees ("performance fees") amounts for all unit classes during the year. Negative amounts indicate an income for the respective class, while positive amounts represent an expense. For further details, refer to Note 6. of the Notes to the Financial Statements.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** AZ Allocation – Asset timing 2024

Legal entity identifier: 549300VWREGOKGCLEO49

## Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?			
Yes	● ○ 🗶 No		
It made sustainable investments with an environmental objective:%  in economic activities that qualify as environmentally sustainable under the EU Taxonomy  in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 16,33% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective		
It made sustainable investments with a social objective:%	It promoted E/S characteristics, but did not make any sustainable investments		

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a

list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

# To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration, which applies to both direct and indirect investments, has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks. The Sub-Fund also excluded investments in funds with an ESG rating of CCC or B because their underlying investments were likely to be excessively exposed to issuers with poor ESG performance, and therefore more likely to be usustainable and/or or result in significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List:</u> the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product

are attained.

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover

Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

In addition, investments in funds with an ESG rating of CCC or B were excluded because their underlying investments were likely to be excessively exposed to issuers with poor ESG performance, and therefore more likely to be unsustainable and/or involve significant environmental and social risks.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the Azimut Investments ESG Policy.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 16,33%, more than the committed minimum percentage of 5%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	15,72%	16,33%
Weighted average ESG score of portfolio	AA	A
Performance of PAI indicators	Please refer to the section "How did this financial product consider principal adverse impacts on sustainability factors?"	

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives? The Sub-fund invested a proportion of sustainable investment equal or greater than 5%. Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and/or
- social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the <u>Azimut Investments ESG Policy</u>.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in four ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

The fourth way was through fund selection, which sought to favor, where possible and if available, funds that were classified as Article 9 SFDR or, as a second choice, those classified as Article 8 SFDRs (not precluding the possibility of holding Article 6 SFDR funds in the portfolio as well). The greater the weight of funds classified as Article 9 or 8 SFDR, the greater the containment of PAIs is expected to be.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

# How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A.

with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

P	AI PERFORMANCE INDICATOR	31/12/22	31/12/23
CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS			
	Scope 1 GHG emissions	12280,25	8371,85
4 0110	Scope 2 GHG emissions	2202,96	1936,42
1. GHG emissions*	Scope 3 GHG emissions	65116,89	59316,76
	Total GHG emissions	81077,62	69091,06
2. Carbon footprint*	Carbon footprint	308,02	303,93
3. GHG intensity of investee companies*	GHG intensity of investee companies	681,31	641,32
4. Exposure to companies active in the fossil fuel sector*	Share of investments in companies active in the fossil fuel sector	6,56%	6,65%
5. Share of non- renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	45,40%	37,95%
6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	0,48	0,25
7. Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	0,04%	0,31%
8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,86	0,01
9. Hazardous waste and radioactive waste ratio	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	131,36	0,81

INDICATORS FOR SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND ANTI-BRIBERY MATTERS			
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises*	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,64%	0,17%
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	30,13%	28,17%
12. Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	2,20%	2,66%
13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	24,65%	30,23%
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)*	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0,06%	0,10%
INDICATORS APPLICABLE TO INVESTMENTS IN SOVEREIGNS AND SUPRANATIONALS			
15. GHG intensity of investee countries	GHG intensity of investee countries	26,52	28,71
16. Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	5 (9,43%)	3 (10%)

All mandatory PAIs were calculated and monitored. The portfolio manager focused on the prioritization of a specific sub-set of PAIs (marked with "\*" in the above table).

#### What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

<sup>\*</sup> The Funds in which the sub fund invested in have a diversified exposure across different sectors.

#### What was the proportion of sustainability-related investments?

# Asset allocation describes the share of investments in specific assets.

#### What was the asset allocation?

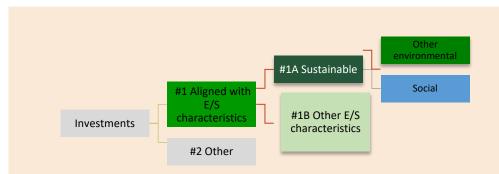

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 90,29% of the portfolio.

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 16,33% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes:
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Others (e.g. cash, sovereign exposures, diversified)	66,62%
Financials	11,64%
Health care	3,81%
Consumer discretionary	3,14%
Industrials	3,04%
Information technology	2,57%
Utilities	2,45%
Consumer staples	1,95%

Materials	1,18%

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Energy	1,00%
Real estate	0,68%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:		
	In fossil gas	In nuclear energy
<b>≭</b> No		

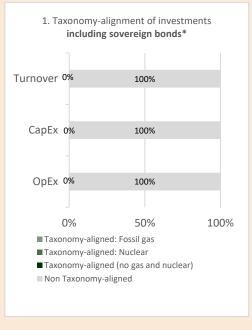

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

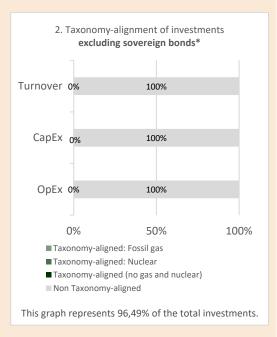

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- capital
   expenditure
   (CapEx) showing
   the green
   investments made
   by investee
   companies, e.g. for
   a transition to a
   green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 11,04%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 5,29%.

# What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

# What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?"

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

How does the reference benchmark differ from a broad market index?
Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AZ Allocation - Escalator 2026 Legal entity identifier: 549300UJFRCTSPX0GN23

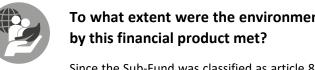

# **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: \_\_\_% sustainable investment, it had a proportion of in economic activities that 21,82% of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: \_\_\_%

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration, which applies to both direct and indirect investments, has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks. The Sub-Fund also excluded investments in funds with an ESG rating of CCC or B because their underlying investments were likely to be excessively exposed to issuers with poor ESG performance, and therefore more likely to be usustainable and/or or result in significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

# How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List:</u> the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover

Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

In addition, investments in funds with an ESG rating of CCC or B were excluded because their underlying investments were likely to be excessively exposed to issuers with poor ESG performance, and therefore more likely to be unsustainable and/or involve significant environmental and social risks.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the Azimut Investments ESG Policy.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 21,82%, more than the committed minimum percentage of 5%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?"

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	13,14%	21,82%
Weighted average ESG score of portfolio	AA	A
Performance of PAI indicators	Please refer to the section "I consider principal adverse impac	How did this financial product cts on sustainability factors? "

# What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and
- social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in four ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

The fourth way was through fund selection, which sought to favor, where possible and if available, funds that were classified as Article 9 SFDR or, as a second choice, those classified as Article 8 SFDRs (not precluding the possibility of holding Article 6 SFDR funds in the portfolio as well). The greater the weight of funds classified as Article 9 or 8 SFDR, the greater the containment of PAIs is expected to be.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

# How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at

shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
(	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS		
	Scope 1 GHG emissions	23920,30	17358,55
	Scope 2 GHG emissions	3526,67	3399,93

<sup>\*</sup>The Funds in which the sub fund invested in have a diversified exposure across different sectors.

# What was the proportion of sustainability-related investments?

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 92,14% of the portfolio.

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 21,82% of the overall investments (#Investments).

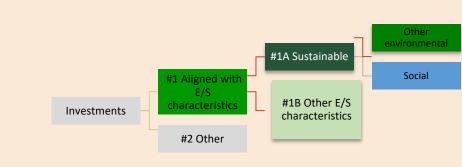

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

# Asset allocation describes the share of investments in

specific assets.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Others (e.g. cash, sovereign exposures, diversified)	63,16%
Financials	18,59%
Utilities	3,20%
Communication services	2,76%
Consumer discretionary	2,71%
Industrials	2,30%
Health care	1,82%
Real estate	1,32%
Consumer staples	1,19%
Materials	1,07%
Energy	1,02%
Information Technology	0,86%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental

objective.

Transitional

activities are
activities for which
low-carbon
alternatives are not
yet available and
among others have
greenhouse gas
emission levels
corresponding to the
best performance.

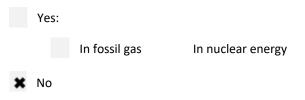

# To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

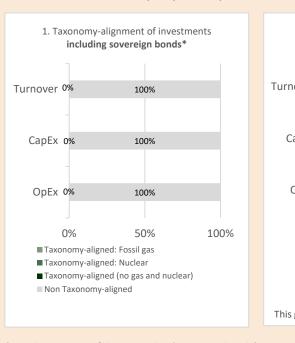

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

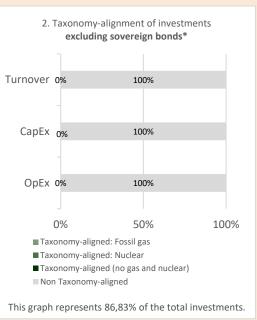

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Taxonomy-aligned activities are expressed as a share of:

- reflecting the share of revenue from green activities of investee companies.
- expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- expenditure
  (OpEx) reflecting
  green operational
  activities of
  investee
  companies.

- operational

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

# What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 15,01%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

#### What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 6,81%.

# What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

# What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?"

## How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

# Reference benchmarks are indexes to

measure whether the financial product attains the environmental or social characteristics that

they promote.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AZ Allocation – Global Balanced

Legal entity identifier: 5493004G6EXONY0MGM33

# Environmental and/or social characteristics

Did this financial product have a sustain	nable investment objective?
Yes	● ○ 🗶 No
It made sustainable investments with an environmental objective:%  in economic activities that qualify as environmentally sustainable under the EU Taxonomy  in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 22,18% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It made sustainable investments with a social objective:%	It promoted E/S characteristics, but did not make any sustainable investments

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

# To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover Adult entertainment: maximum 1.5% of the annual turnover Tobacco: maximum 5.0% of the annual turnover Gambling: maximum 5.0% of the annual turnover Thermal Coal: maximum 20% of the annual turnover controversial weapons: no exposure (Any Tie)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the Azimut Investments ESG Policy.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 22,18%, more than the committed minimum percentage of 5%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	11,2%	22,18%
Weighted average ESG score of portfolio	AA	А
Performance of PAI indicators	Please refer to the section "I consider principal adverse impac	How did this financial product cts on sustainability factors? "

# What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and
- social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in three ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

# How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATO	RS	
	Scope 1 GHG emissions	13504,72	22385,75
	Scope 2 GHG emissions	1613,20	2037,41
1. GHG emissions*	Scope 3 GHG emissions	38972,76	58888,44
	Total GHG emissions	53529,17	82262,94
2. Carbon footprint*	Carbon footprint	133,45	245,40
3. GHG intensity of investee companies*	GHG intensity of investee companies	493,08	583,91
4. Exposure to companies active in the fossil fuel sector*	Share of investments in companies active in the fossil fuel sector	7,31%	10,14%
5. Share of non- renewable energy consumption and production*	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	43,46%	38,93%
6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	0,77	0,41
7. Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	0,00%	0,01%
8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,16	0,00
9. Hazardous waste and radioactive waste ratio	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	2,92	0,09
INDICATORS FOR SOCIA	AL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-COR MATTERS	RUPTION AND	ANTI-BRIBERY
10. \* The Funds in which the sub fund invested in have a diversified exposure across different sectors.

**Asset allocation** 

describes the

investments in specific assets.

# What was the proportion of sustainability-related investments?

# What was the asset allocation?

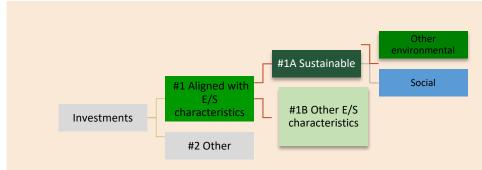

the environmental and social characteristics, the minimum proportion of the investments In accordance with the binding element of the investment strategy adopted for promoting aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 94,7% of the portfolio. In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 22,18% of the overall investments (#Investments). The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data. To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Others (e.g. cash, sovereign exposures, diversified)	28,27%
Financials	12,76%
Information Technology	11,59%
Health Care	10,93%
Consumer Staples	7,52%
Communication Services	7,51%
Industrials	7,01%
Utilities	4,82%
Consumer Discretionary	3,92%
Materials	2,74%
Energy	1,97%
Real Estate	0,96%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

# To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Did the financial product invest in fossil gas and/or nuclear energy related

In nuclear energy

activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

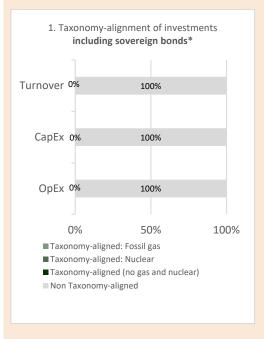

In fossil gas

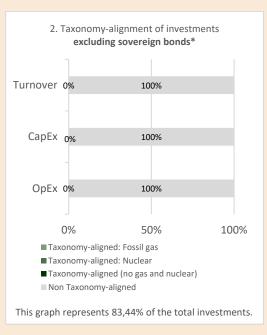

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- capital
  expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 11,72%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

#### What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 10,45%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

# What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

# What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

# How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

How does the reference benchmark differ from a broad market index?

# Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that

they promote.

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

Product name: AZ Allocation – Global Conservative

Legal entity identifier: 549300KRLD6UY11X3026

# Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?		
Yes	• No	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy  in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of% of sustainable investments  with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  with a social objective	
It made sustainable investments with a social objective:%	It promoted E/S characteristics, but did not make any sustainable investments	

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation

does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration, which applies to both direct and indirect investments, has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

• Exclusion List: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover
 Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

• The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <u>Azimut Investments ESG Policy</u>.

• The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

## ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
Weighted average ESG score of portfolio	AA	A
Performance of PAI indicators	Please refer to the section "How did this financial product consider principal adverse impacts on sustainability factors?"	

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?
 Not applicable.
 How were the indicators for adverse impacts on sustainability factors taken into account?
 Not applicable.
 Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

# How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at

shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICAT	ORS	
	Scope 1 GHG emissions	5805,42	2246,60
	Scope 2 GHG emissions	810,71	367,04
1. GHG emissions*	Scope 3 GHG emissions	42799,23	14174,61

# What was the proportion of sustainability-related investments?

## What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 91,1% of the portfolio.

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for

Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

#2 Other

#1 Aligned with E/S characteristics Investments To comply with the EU Taxonomy, the criteria for fossil gas include limitations on #1 Aligned with E/S characteristics includes the investments of the financial product used to attain the emissions and environmental or social characteristics promoted by the financial product. switching to fully #20ther includes the remaining investments of the financial product which are neither aligned with the renewable power environmental or social characteristics, nor are qualified as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Others (e.g. cash, sovereign exposures, diversified)	56,45%
Financials	20,10%
Communication Services	4,57%
Information Technology	3,66%
Health Care	3,17%
Consumer Discretionary	3,16%
Consumer Staples	2,09%
Industrials	1,81%
Utilities	1,69%
Real Estate	1,65%
Energy	0,83%
Materials	0,80%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional** activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

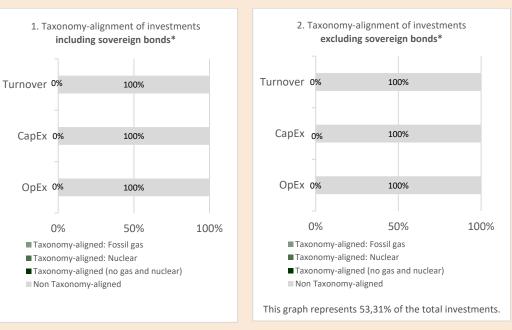

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

	Yes:		
		In fossil gas	In nuclear energy
×	No		

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

<sup>\*</sup>For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?
Not applicable.

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data

# What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United

Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

# 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an

environmental objective might be aligned with the Taxonomy or not.

The **EU Taxonomy** is a classification system laid down in Regulation (EU)

Sustainable investment means

practices.

an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

# To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover Adult entertainment: maximum 1.5% of the annual turnover Tobacco: maximum 5.0% of the annual turnover Gambling: maximum 5.0% of the annual turnover Thermal Coal: maximum 20% of the annual turnover controversial weapons: no exposure (Any Tie)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <a href="https://example.com/Azimut Investments">Azimut Investments ESG Policy</a>.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 26,46%, more than the committed minimum percentage of 5%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	8,5%	26,46%
Weighted average ESG score of portfolio	AA	A
Performance of PAI indicators	Please refer to the section "I consider principal adverse impac	

#### What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and
- social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in three ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the UE criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

# How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23		
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS				
	Scope 1 GHG emissions	9483,46	9442,18

<sup>\*</sup> The Funds in which the sub fund invested in have a diversified exposure across different sectors.

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

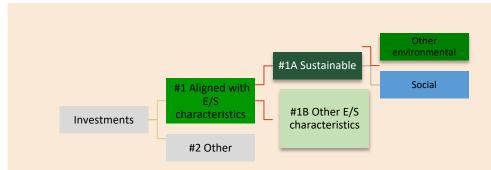

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 93,22% of the portfolio.

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 26,46% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Others (e.g. cash, sovereign exposures, diversified)	40,02%
Consumer Staples	10,84%
Health Care	9,64%
Financials	8,44%
Industrials	7,67%
Information Technology	7,53%
Consumer Discretionary	5,17%
Utilities	3,67%
Energy	3,05%
Communication Services	2,15%
Real Estate	1,58%
Materials	0,24%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

#### **Enabling activities**

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

# To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

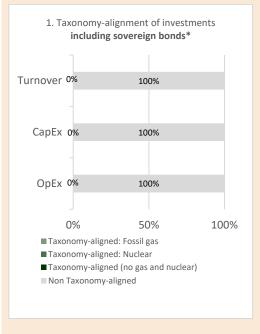

Yes:		
	In fossil gas	In nuclear energy
<b>≭</b> No		

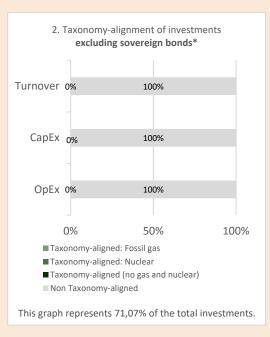

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- reflecting the share of revenue from green activities of investee companies.
- capital
  expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 16,94%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

#### What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 9,52%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

# What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

# What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?"

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

How does the reference benchmark differ from a broad market index?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** AZ Allocation – Italian Trend **Legal entity identifier:** 549300ULBRCGEVCJ1335

#### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) investments with an **characteristics** and while it did not have as its objective a environmental objective: \_\_\_% sustainable investment, it had a proportion of in economic activities that % of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: \_\_\_%

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the

UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration, which applies to both direct and indirect investments, has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

• Exclusion List: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover
 Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

• The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was at least BBB. Specifically, the portfolio's average ESG rating as of 31/12/2023 was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <u>Azimut Investments ESG Policy</u>.

• The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
Weighted average ESG score of portfolio	A	A
Performance of PAI indicators	Please refer to the section "I consider principal adverse impac	How did this financial product cts on sustainability factors? "

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

— Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

# How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 73,36% of the portfolio.

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for

Asset allocation describes the share of investments in specific assets.

Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

# Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

#### *In which economic sectors were the investments made?*

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Others (e.g. cash, sovereign exposures, diversified)	31,94%
Financials	17,12%
Consumer Discretionary	12,81%
Industrials	10,50%
Utilities	7,30%
Communication Services	7,08%
Health Care	5,93%
Energy	2,84%
Information Technology	2,29%
Consumer Staples	1,76%
Materials	0,43%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

 Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

	Yes:		
		In fossil gas	In nuclear energy
×	No		

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activitiesof investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

<sup>\*</sup>For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Not applicable.

What was the share of investments made in transitional and enabling activities?

100%

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

#### How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

# What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

# What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

# What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way

intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?"

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** AZ Allocation – Long Term Equity Opportunities

Legal entity identifier: 549300OI5RZB0KJ2PF69

#### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective?				
• • Yes	● No			
investments with an environmental objective:%  in economic activities that qualify as environmentally sustainable under the EU Taxonomy  in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 42,25% of sustainable investments  with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  with a social objective			
It made sustainable investments with a social objective:%	It promoted E/S characteristics, but did not make any sustainable investments			

Sustainable investment means

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not include a list of socially sustainable

economic activities.

investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable

an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

# To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover
 Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <a href="https://example.com/Azimut Investments">Azimut Investments ESG Policy</a>.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 42,25%, more than the committed minimum percentage of 5%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	6,7%	42,25%
Weighted average ESG score of portfolio	A	A
Performance of PAI indicators	Please refer to the section "How did this financial prod consider principal adverse impacts on sustainability factors?"	

#### What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and
- social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in three ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

# How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

PAI PERFORMANCE INDICATOR	31/12/22	31/12/23

CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS				
	Scope 1 GHG emissions	7261,25	9503,06	
	Scope 2 GHG emissions	779,31	1479,35	
1. GHG emissions*	Scope 3 GHG emissions	50035,82	82439,37	
	Total GHG emissions	57014,64	90436,77	
2. Carbon footprint*	Carbon footprint	518,78	458,15	
3. GHG intensity of investee companies*	GHG intensity of investee companies	747,59	768,15	
4. Exposure to companies active in the fossil fuel sector*	Share of investments in companies active in the fossil fuel sector	17,97%	16,79%	
5. Share of non- renewable energy consumption and production*	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	56,20%	39,13%	
6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	0,85	1,15	
7. Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	0,00%	0,00%	
8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	1,48	0,00	
9. Hazardous waste and radioactive waste ratio	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,35	0,21	
INDICATORS FOR SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND ANTI-BRIBERY MATTERS				
10. KERING	Consumer Discretionary	2,46%	FRANCE
WEST JAPAN RAILWAY CO	Industrials	2,42%	JAPAN
SALESFORCE INC	Information Technology	2,28%	UNITED STATES

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 94,01% of the portfolio.

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 42,25% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes:
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

#1A Sustainable

#1A Sustainable

Social

E/S
characteristics

#1B Other E/S
characteristics

#2 Other

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Others (e.g. cash, sovereign exposures, diversified)	19,68%
Financials	15,77%
Industrials	13,42%
Health Care	10,30%
Consumer Staples	9,36%
Utilities	7,87%
Consumer Discretionary	6,09%
Communication Services	5,83%
Energy	5,60%
Information Technology	3,26%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

best performance.

To comply with the

EU Taxonomy, the criteria for **fossil** 

gas include

limitations on

emissions and

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria

comprehensive

management

**Transitional** 

safety and waste

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

include

rules.

switching to fully

renewable power

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

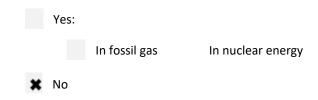

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

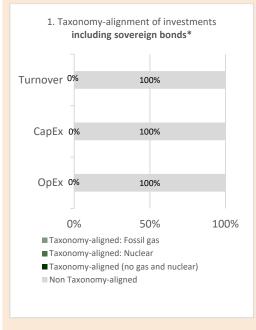

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

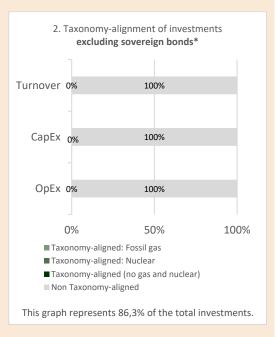

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

<sup>\*</sup>For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

#### What was the share of investments made in transitional and enabling activities?

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 27,39%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

#### What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 14,87%.

## What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes:
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut

are
sustainable
investments with an
environmental
objective that do
not take into
account the criteria
for environmentally
sustainable
economic activities
under Regulation

(EU) 2020/852.

Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AZ Allocation – Strategic Balanced Catholic Values Legal entity identifier: 549300L5HOY7WLIERT06

#### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective? Yes It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: \_\_\_% sustainable investment, it had a proportion of in economic activities that 22,74% of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: \_\_\_%

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover Adult entertainment: maximum 1.5% of the annual turnover Tobacco: maximum 5.0% of the annual turnover Gambling: maximum 5.0% of the annual turnover Thermal Coal: maximum 20% of the annual turnover controversial weapons: no exposure (Any Tie)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <a href="https://example.com/Azimut Investments">Azimut Investments ESG Policy</a>.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 22,74%, more than the committed minimum percentage of 5%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	11,47%	22,74%
Weighted average ESG score of portfolio	AA	A
Performance of PAI indicators	Please refer to the section "How did this financial product consider principal adverse impacts on sustainability factors?"	

#### What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and
- social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

## How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in three ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

## How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at

shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDI	CATORS	
	Scope 1 GHG emissions	772,43	400,24
	Scope 2 GHG emissions	206,49	145,65
1. GHG emissions*	Scope 3 GHG emissions	4209,16	3959,20
	Total GHG emissions	5226,35	4370,80
2. Carbon footprint*	Carbon footprint	113,45	88,69
3. GHG intensity of investee companies*	GHG intensity of investee companies	300,19	237,35
4. Exposure to companies active in the fossil fuel sector*	Share of investments in companies active in the fossil fuel sector	3,19%	2,06%
5. Share of non- renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	24,60%	17,21%
6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	0,17	0,10
7. Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	0,00%	0,00%
8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,51	0,00
9. Hazardous waste and radioactive waste ratio	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,03	0,04

INDICATORS FOR SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND ANTI-BRIBERY MATTERS

10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises*	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,00%	0,00%	
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	19,87%	0,00%	
12. Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	1,29%	1,87%	
13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	14,04%	15,20%	
14. Exposure to controversial weapons (antipersonnel mines, cluster munitions, chemical weapons and biological weapons)*	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0,00%	0,00%	
INDICATORS APPLICABLE TO INVESTMENTS IN SOVEREIGNS AND SUPRANATIONALS				
15. GHG intensity of investee countries*	GHG intensity of investee countries	116,14	123,61	
16. Investee countries subject to social violations*	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 (0%)	0 (0%)	

All mandatory PAIs were calculated and monitored. The portfolio manager focused on the prioritization of a specific sub-set of PAIs (marked with "\*" in the above table).

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is:
Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

#### What were the top investments of this financial product?

Sector	% Assets	Country
Others	6,36%	GERMANY
Others	6,20%	GERMANY
Others	5,48%	GERMANY
Others	4,80%	SPAIN
Others	4,24%	FRANCE
Others	3,74%	FRANCE
Others	3,40%	ITALY
Others	2,74%	FRANCE
Others	2,63%	SPAIN
Others	2,10%	FRANCE
Others	1,94%	ITALY
Information Technology	1,93%	UNITED STATES
Others	1,86%	ITALY
Others	1,76%	SPAIN
Others	1,73%	ITALY
	Others	Others       6,36%         Others       6,20%         Others       5,48%         Others       4,80%         Others       4,24%         Others       3,74%         Others       2,74%         Others       2,63%         Others       2,10%         Others       1,94%         Information Technology       1,93%         Others       1,86%         Others       1,76%

Asset allocation describes the share of investments in specific assets.

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

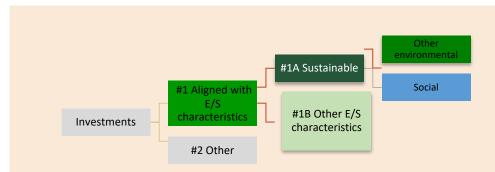

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 99,13% of the portfolio.

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 22,74% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Others (e.g. cash, sovereign exposures, diversified)	59,84%
Financials	11,54%
Information Technology	10,54%
Consumer Discretionary	4,36%
Industrials	4,21%
Health Care	2,43%
Communication Services	1,79%

Materials	1,41%
Consumer Staples	1,26%
Real Estate	1,18%
Utilities	0,72%
Energy	0,71%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

## Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

# Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

### To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

	Yes:			
		In fossil gas	In nuclear en	ergy
×	No			

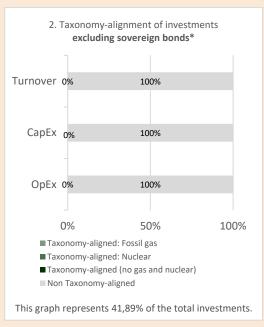

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 15,52%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

What was the share of socially sustainable investments?

## What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** AZ Allocation – Trend **Legal entity identifier:** 549300ML4HH5XF8XH293

#### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: \_\_\_% sustainable investment, it had a proportion of in economic activities that 37,92% of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: \_\_\_%

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover Adult entertainment: maximum 1.5% of the annual turnover Tobacco: maximum 5.0% of the annual turnover Gambling: maximum 5.0% of the annual turnover Thermal Coal: maximum 20% of the annual turnover controversial weapons: no exposure (Any Tie)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <a href="https://example.com/Azimut Investments">Azimut Investments ESG Policy</a>.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 37,92%, more than the committed minimum percentage of 5%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	11,1%	37,92%
Weighted average ESG score of portfolio	AA	А
Performance of PAI indicators	Please refer to the section "How did this financial produc consider principal adverse impacts on sustainability factors?"	

#### What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and
- social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

## How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in three ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

## How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23		
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS				
	Scope 1 GHG emissions	198645,86	116031,88		
	Scope 2 GHG emissions	16601,50	19533,04		
1. GHG emissions*	Scope 3 GHG emissions	432153,79	719269,33		
	Total GHG emissions	647222,47	774712,99		
2. Carbon footprint*	Carbon footprint	316,04	319,23		
3. GHG intensity of investee companies*	GHG intensity of investee companies	457,93	763,20		
4. Exposure to companies active in the fossil fuel sector*	Share of investments in companies active in the fossil fuel sector	8,42%	11,66%		
5. Share of non- renewable energy consumption and production*	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	40,06%	41,93%		
6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	0,36	0,44

All mandatory PAIs were calculated and monitored. The portfolio manager focused on the prioritization of a specific sub-set of PAIs (marked with "\*" in the above table).

## The list includes the investments constituting the greatest proportion of investments of

the financial product during the reference period which is: Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

#### What were the top investments of this financial product?

Largest investments	Sector	% Assets	Country
SALESFORCE INC	Information Technology	1,88%	UNITED STATES
CISCO SYSTEMS INC	Information Technology	1,88%	UNITED STATES
JPMORGAN CHASE & CO	Financials	1,83%	UNITED STATES
TE CONNECTIVITY LTD	Information Technology	1,78%	SWITZERLAND
NEXTERA ENERGY INC	Utilities	1,59%	UNITED STATES
MICROSOFT CORP	Information Technology	1,57%	UNITED STATES
UNITEDHEALTH GROUP INC	Health Care	1,56%	UNITED STATES

APPLE INC	Information Technology	1,55%	UNITED STATES
MICRON TECHNOLOGY INC	Information Technology	1,45%	UNITED STATES
COCA-COLA CO/THE	Consumer Staples	1,42%	UNITED STATES
ADOBE INC	Information Technology	1,37%	UNITED STATES
NVIDIA CORP	Information Technology	1,31%	UNITED STATES
ENAV SPA	Industrials	1,26%	ITALY
SIEMENS AG-REG	Industrials	1,25%	GERMANY
JOHNSON & JOHNSON	Health Care	1,21%	UNITED STATES

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 90,64% of the portfolio.

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 37,92% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes:
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

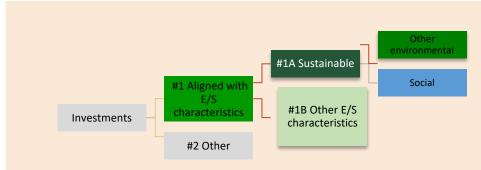

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

Asset allocation describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

## Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

# Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Information Technology	17,53%
Health Care	16,33%
Financials	11,58%
Industrials	11,20%
Others (e.g. cash, sovereign exposures, diversified)	9,27%
Utilities	8,93%
Consumer Discretionary	7,69%
Communication Services	7,03%
Consumer Staples	3,57%
Materials	3,24%
Energy	2,62%
Real Estate	1,01%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

Taxonomy-aligned activities are expressed as a share of:

- reflecting the share of revenue from green activities of investee companies.
- capital
  expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

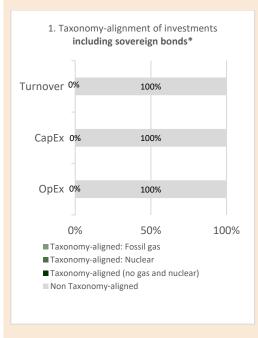

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

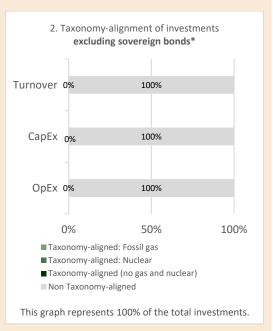

Yes:

In fossil gas
In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

<sup>\*</sup>For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

## What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 25,53%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

#### What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 12,4%.

## What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

#### Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AZ Alternative – Capital Enhanced Legal entity identifier: 549300MWTPYW8SIQKB20

#### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) investments with an **characteristics** and while it did not have as its objective a environmental objective: \_\_\_% sustainable investment, it had a proportion of in economic activities that % of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: \_\_\_%

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable

investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the

UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration, which applies to both direct and indirect investments, has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

• Exclusion List: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover
 Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

• The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <u>Azimut Investments ESG Policy</u>.

• The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
Weighted average ESG score of portfolio	А	A
Performance of PAI indicators	Please refer to the section "I consider principal adverse impac	How did this financial product cts on sustainability factors? "

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

— Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm UE Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the UE criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the UE criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

## How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATOR	<u> </u> S	
	Scope 1 GHG emissions	0,86	1816,93
	Scope 2 GHG emissions	1,34	208,53
1. GHG emissions*	Scope 3 GHG emissions	495,75	8778,54
	Total GHG emissions	497,96	9764,98
2. Carbon footprint*	Carbon footprint	1,04	16,41
3. GHG intensity of investee companies*	GHG intensity of investee companies	9,31	21,46
4. Exposure to companies active in the fossil fuel sector*	Share of investments in companies active in the fossil fuel sector	0,00%	0,29%
5. Share of non- renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	0,87%	1,82%
6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	0,00	0,01
7. Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	0,00%	0,00%
8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,00	0,00
9. Hazardous waste and radioactive waste ratio	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,00	0,04

INDICATORS FOR SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND ANTI-BRIBERY MATTERS			
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises*	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,00%	0,00%
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,00%	0,16%
12. Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	0,00%	0,04%
13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	1,37%	1,32%
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)*	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0,00%	0,00%
INDICAT	INDICATORS APPLICABLE TO INVESTMENTS IN SOVEREIGNS AND SUPRANATIONALS		
15. GHG intensity of investee countries*	GHG intensity of investee countries	61,41	68,08
16. Investee countries subject to social violations*	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 (0%)	0 (0%)

All mandatory PAIs were calculated and monitored. The portfolio manager focused on the prioritization of a specific sub-set of PAIs (marked with "\*" in the above table).

#### What were the top investments of this financial product?

Largest investments	Sector	% Assets	Country
GERMAN T-BILL 0% 23-17/01/2024	Others	4,20%	GERMANY

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 97,31% of the portfolio.

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and

 securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

## Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

# Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Others (e.g. cash, sovereign exposures, diversified)	97,10%
Financials	1,39%
Consumer Staples	0,50%
Energy	0,26%
Information Technology	0,26%
Utilities	0,25%
Consumer Discretionary	0,25%

Some of the GICS sectors may include activities related to fossil fuel related. For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

Taxonomy-aligned activities are expressed as a share of:

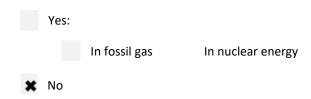

- turnover
   reflecting the
   share of revenue
   from green
   activities of
   investee
   companies.
- expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

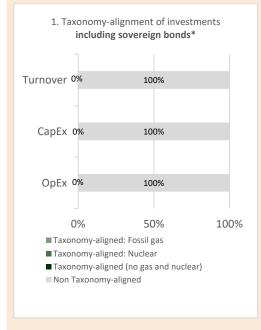

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

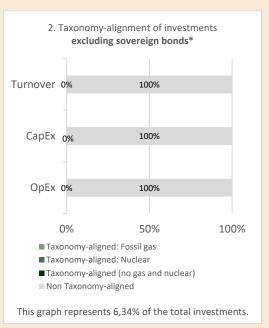

Not applicable.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

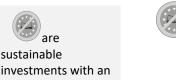

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- What was the share of investments made in transitional and enabling activities? Not applicable.
- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

environmental objective that do

not take into account the criteria

sustainable

for environmentally

economic activities under Regulation

(EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

#### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** AZ Bond – Convertible **Legal entity identifier:** 549300R8BCUSGSSIYN97

#### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: \_\_\_% sustainable investment, it had a proportion of in economic activities that 35,73% of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: \_\_\_%

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation

does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover
 Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <a href="https://example.com/Azimut Investments">Azimut Investments ESG Policy</a>.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 35,73%, more than the committed minimum percentage of 5%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	14,7%	35,73%
Weighted average ESG score of portfolio	AA	A
Performance of PAI indicators	Please refer to the section "How did this financial product consider principal adverse impacts on sustainability factors?"	

#### What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and
- social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

## How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in three ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

## How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23		
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 89,11% of the portfolio.

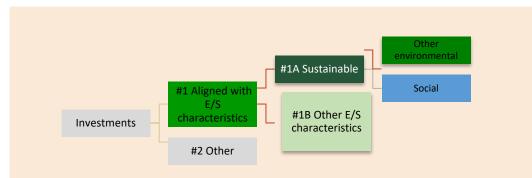

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 35,73% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

 cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;

- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Financials	19,62%
Information Technology	19,52%
Industrials	13,55%
Others (e.g. cash, sovereign exposures, diversified)	10,89%
Consumer Discretionary	8,80%
Health Care	7,81%
Utilities	5,74%
Communication Services	3,81%
Real Estate	3,46%
Materials	3,06%
Consumer Staples	2,94%

Energy	0.81%
Lifeigy	0,0170

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Ye	25:	
	In fossil gas	In nuclear energ
<b>≭</b> No	<b>D</b>	

To comply with the

EU Taxonomy, the

#### Enabling activities directly enable other activities to make a substantial contribution to an environmental

objective.

Transitional

activities are
activities for which
low-carbon
alternatives are not
yet available and
among others have
greenhouse gas
emission levels
corresponding to the
best performance.

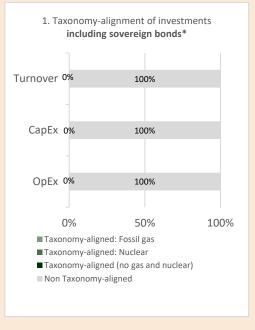

criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

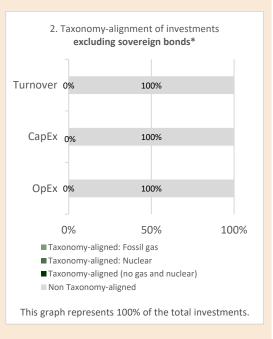

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activities of
   investee
   companies.
- capital
   expenditure
   (CapEx) showing
   the green
   investments made
   by investee
   companies, e.g. for
   a transition to a
   green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 25,56%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 10,17%.

## What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

How does the reference benchmark differ from a broad market index?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AZ bond – Green & Social Legal entity identifier: 549300UUMGYV5J2ZVH49

#### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective?				
Yes	• No			
in economic activities that qualify as environmentally sustainable under the EU Taxonomy  in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 89,45% of sustainable investments  with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  with a social objective			
It made sustainable investments with a social objective:%	It promoted E/S characteristics, but did not make any sustainable investments			

2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental

objective might be aligned with the Taxonomy or not.

The **EU Taxonomy** is a classification system laid down in Regulation (EU)

Sustainable investment means

practices.

an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover Adult entertainment: maximum 1.5% of the annual turnover Tobacco: maximum 5.0% of the annual turnover Gambling: maximum 5.0% of the annual turnover Thermal Coal: maximum 20% of the annual turnover controversial weapons: no exposure (Any Tie)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was at least BBB. Specifically, the portfolio's average ESG rating as of 31/12/2023 was AA, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the Azimut Investments ESG Policy.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 89,45%, more than the committed minimum percentage of 15%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	77,8%	89,45%
Weighted average ESG score of portfolio	AA	AA
Performance of PAI indicators	Please refer to the section "How did this financial product consider principal adverse impacts on sustainability factors?"	

#### What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and
  - social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

## How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in two ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the <a href="https://www.website.disclosure">website disclosure</a>.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

## How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23	
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS			
	Scope 1 GHG emissions	17686,33	12965,21	
	Scope 2 GHG emissions	1481,43	1492,85

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 93,32% of the portfolio.

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 89,45% of the overall investments (#Investments).

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

#### **Enabling activities**

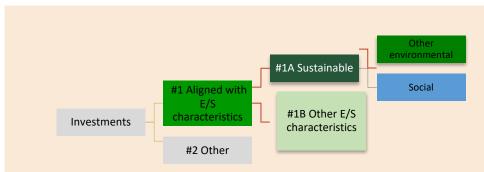

directly enable other activities to make a substantial contribution to an environmental objective.

### Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance. The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Financials	33,62%
Utilities	24,36%
Others (e.g. cash, sovereign exposures, diversified)	19,71%
Communication Services	10,06%
Real Estate	5,14%
Materials	3,22%
Consumer Discretionary	1,60%

Consumer Staples	0,95%
Health Care	0,91%
Industrials	0,44%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

	Yes:		
		In fossil gas	In nuclear energy
×	No		

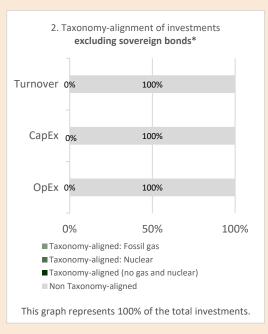

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- capital
  expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 79,0%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

What was the share of socially sustainable investments?

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The share of socially sustainable investments, as of 31/12/2023, was 10,44%.

## What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Accordingly to the strategy adopted in order to promote the environmental and/or social characteristics, Azimut Investments S.A.:

- excluded any investment in companies operating in sectors that are considered nonsustainable and/or may involve significant environmental and social risks;
- considered the Environmental, Social and Governance scores on each investment alongside the traditional criteria of analysis and evaluation. The ESG score was monitored, both at single investment level and on an aggregate basis;
- ensured a percentage of sustainable investments equal to or greater than 15%;
- calculated and monitored the adverse impact of investments on sustainability factors, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AZ bond – Patriot Legal entity identifier: 549300GIE7ANYWO61J67

#### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) investments with an characteristics and while it did not have as its objective a environmental objective: % sustainable investment, it had a proportion of in economic activities that % of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but did not make any sustainable investments with a social objective: \_\_\_%

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable

economic activities.

investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover
 Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

• The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <u>Azimut Investments ESG Policy</u>.

• The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

# ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
Weighted average ESG score of portfolio	А	А
Performance of PAI indicators	Please refer to the section "I consider principal adverse impac	How did this financial product cts on sustainability factors? "

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

# How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATO	RS	
	Scope 1 GHG emissions	8302,92	6875,68
	Scope 2 GHG emissions	650,63	1295,92
1. GHG emissions*	Scope 3 GHG emissions	64528,55	23280,11

investments in specific assets.

### What was the proportion of sustainability-related investments?

### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 86,13% of the portfolio.

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Others (e.g. cash, sovereign exposures, diversified)	70,32%
Financials	21,66%
Utilities	5,47%
Communication Services	1,29%
Industrials	0,94%
Consumer Discretionary	0,31%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

# directly enable other activities to make a substantial contribution to an

**Enabling activities** 

contribution to environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels

corresponding to the best performance.

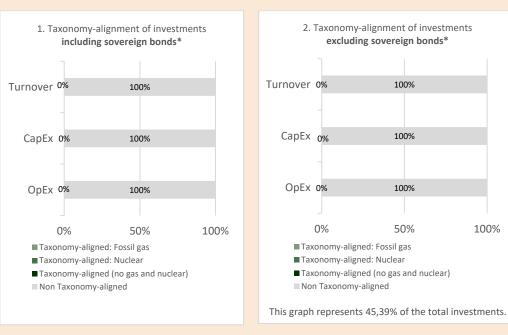

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

	Yes:		
		In fossil gas	In nuclear energy
×	No		

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?
Not applicable.

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activities of
   investee
   companies.
- expenditure
  (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
  expenditure
  (OpEx) reflecting
  green operational
  activities of
  investee
  companies.

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Accordingly to the strategy adopted in order to promote the environmental and/or social characteristics, Azimut Investments S.A.:

 excluded any investment in companies operating in sectors that are considered nonsustainable and/or may involve significant environmental and social risks;

- considered the Environmental, Social and Governance scores on each investment alongside the traditional criteria of analysis and evaluation. The ESG score was monitored, both at single investment level and on an aggregate basis;
- calculated and monitored the adverse impact of investments on sustainability factors, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

## How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** AZ bond – Sustainable Hybrid

Legal entity identifier: 54930048Y4PIQFNZBJ14

# **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective?			
Did this infancial product have a sustain	nable investment objective:		
• • Yes	● ○ 🗶 No		
It made sustainable investments with an environmental objective:%  in economic activities that qualify as environmentally sustainable under the EU Taxonomy  in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 35,31% of sustainable investments  with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  with a social objective		
It made sustainable investments with a social objective:%	It promoted E/S characteristics, but did not make any sustainable investments		

an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Sustainable investment means

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

# To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover Adult entertainment: maximum 1.5% of the annual turnover Tobacco: maximum 5.0% of the annual turnover Gambling: maximum 5.0% of the annual turnover Thermal Coal: maximum 20% of the annual turnover controversial weapons: no exposure (Any Tie)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was at least BBB. Specifically, the portfolio's average ESG rating as of 31/12/2023 was AA. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the Azimut Investments ESG Policy.
- <u>A minimum percentage in sustainable investment</u>: the portfolio manager ensured a percentage of sustainable investments equal to or greater than 10%. Specifically, the share of sustainable investments as of 31/12/2023 was 35,31%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	21,2%	35,31%
Weighted average ESG score of portfolio	AA	AA
Performance of PAI indicators	Please refer to the section "How did this financial produc consider principal adverse impacts on sustainability factors?"	

# What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Sub-fund invested a proportion of sustainable investment equal or greater than 10%. Sustainable investments generated a positive contribution of at least 20% to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and/or
  - social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in two ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and anti-

bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

Investee companies marked with an orange or a red flag were not considered sustainable investments.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the UE criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

# How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager constantly monitors PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

PAI PERFORMANCE INDICATOR			31/12/23
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS	S	
	Scope 1 GHG emissions	27074,03	76500,28
	Scope 2 GHG emissions	6462,02	13314,62
1. GHG emissions*	Scope 3 GHG emissions	58812,05	269009,35
	Total GHG emissions	89395,51	358313,74
2. Carbon footprint*	Carbon footprint	246,55	357,54
3. GHG intensity of investee companies*	GHG intensity of investee companies	640,41	746,92
4. Exposure to companies active in the fossil fuel sector*	Share of investments in companies active in the fossil fuel sector	10,95%	15,33%
5. Share of non- renewable energy consumption and production*	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	57,16%	46,17%
6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	0,93	0,40
7. Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive	0,00%	0,21%

	areas where activities of those investee companies negatively affect those areas		
8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,005	0,00
9. Hazardous waste and radioactive waste ratio	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	1,02	0,34
INDICATORS FOR SOCIA	AL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRU MATTERS	JPTION AND AN	NTI-BRIBERY
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises*	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,00%	0,00%
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	17,00%	0,00%
12. Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	5,35%	6,29%
13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	38,11%	37,39%
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)*	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0,00%	0,00%
INDICAT	ORS APPLICABLE TO INVESTMENTS IN SOVEREIGNS AND SUPRA	ANATIONALS	
15. GHG intensity of investee countries	GHG intensity of investee countries	0,00	0,00
16. Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 (0%)	0 (0%)

All mandatory PAIs were calculated and monitored. The portfolio manager focused on the prioritization of a specific sub-set of PAIs (marked with "\*" in the above table).

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31/12/2023

# What was the proportion of sustainability-related investments?

# What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 94,43% of the portfolio.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

# **Enabling activities** directly enable

directly enable other activities to make a substantial contribution to an environmental objective.

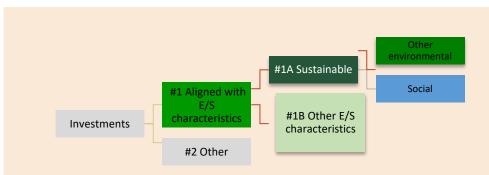

# Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance. In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 35,31% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited to:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of direct investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Financials	47,63%
Utilities	13,23%
Others (e.g. cash, sovereign exposures, diversified)	11,47%
Communication Services	10,42%
Industrials	3,99%

Real Estate	3,77%
Energy	3,52%
Consumer Discretionary	1,91%
Materials	1,48%
Health Care	1,30%
Information Technology	1,28%

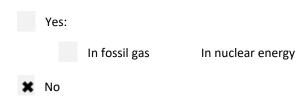

# To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

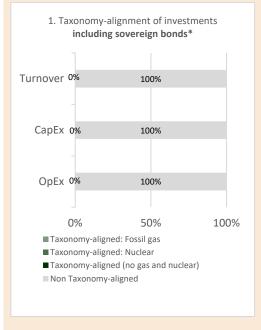

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

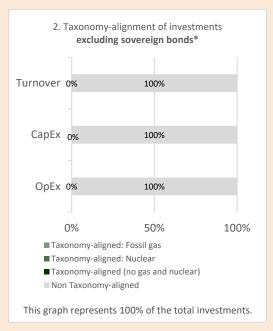

- Taxonomy-aligned activities are expressed as a share of:
- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- capital
  expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 29,03%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

What was the share of socially sustainable investments?

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The share of socially sustainable investments, as of 31/12/2023, was 6,28%.

# What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited to:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

# What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Accordingly to the strategy adopted in order to promote the environmental and/or social characteristics, Azimut Investments S.A.:

- excluded any investment in companies operating in sectors that are considered nonsustainable and/or may involve significant environmental and social risks;
- considered the Environmental, Social and Governance scores on each investment alongside the traditional criteria of analysis and evaluation. The ESG score was monitored, both at single investment level and on an aggregate basis;
- ensured a percentage of sustainable investments equal to or greater than 10%;
- calculated and monitored the adverse impact of investments on sustainability factors, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

How does the reference benchmark differ from a broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AZ bond – Target 2024 Legal entity identifier: 549300UDGZSOD820DJ62

# **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) investments with an characteristics and while it did not have as its objective a environmental objective: % sustainable investment, it had a proportion of in economic activities that % of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but did not make any sustainable investments with a social objective: \_\_\_%

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a

does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

# How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

Exclusion List: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

maximum 1.5% of the annual turnover Nuclear weapons: Adult entertainment: maximum 1.5% of the annual turnover Tobacco: maximum 5.0% of the annual turnover Gambling: maximum 5.0% of the annual turnover Thermal Coal: maximum 20% of the annual turnover Controversial weapons: no exposure (Any Tie)

indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability

The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was was A, more than the committed minimum rating of BBB. Doing so, the portfolio

manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <u>Azimut Investments ESG Policy</u>.

• The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

Not applicable.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

# How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23

# What was the proportion of sustainability-related investments?

### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 84,23% of the portfolio.

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

# Asset allocation describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management

# Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

rules.

# Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Financials	49,16%
Others (e.g. cash, sovereign exposures, diversified)	33,28%
Materials	5,50%
Consumer Discretionary	2,93%
Industrials	2,05%
Health Care	1,95%
Information Technology	1,79%
Utilities	1,54%
Communication Services	0,84%
Energy	0,56%
Real Estate	0,41%
Consumer Staples	0,01%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

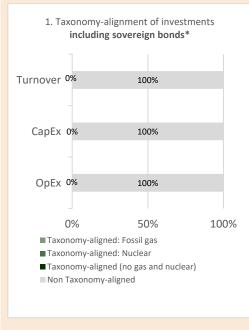

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

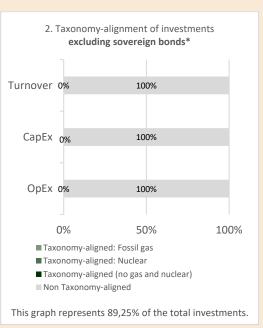

Not applicable.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

<sup>\*</sup>For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?
Not applicable.

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Accordingly to the strategy adopted in order to promote the environmental and/or social characteristics, Azimut Investments S.A.:

 excluded any investment in companies operating in sectors that are considered nonsustainable and/or may involve significant environmental and social risks;

(EU) 2020/852.

- considered the Environmental, Social and Governance scores on each investment alongside the traditional criteria of analysis and evaluation. The ESG score was monitored, both at single investment level and on an aggregate basis;
- calculated and monitored the adverse impact of investments on sustainability factors, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?"

# How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** AZ bond – Target 2025 **Legal entity identifier:** 5493007LLERQBDBTWY59

# **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective? Yes No It made sustainable It promoted Environmental/Social (E/S) investments with an characteristics and while it did not have as its objective a environmental objective: % sustainable investment, it had a proportion of in economic activities that % of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but did not make any sustainable investments with a social objective: \_\_\_%

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable

economic activities.

investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

# How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover
 Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

• The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <u>Azimut Investments ESG Policy</u>.

• The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

# ...and compared to previous periods?

Performance of PAI indicators	dicators Please refer to the section "How did this financial consider principal adverse impacts on sustainability factors."	

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

# How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23

# What was the proportion of sustainability-related investments?

# Asset allocation describes the share of

share of investments in specific assets.

## What was the asset allocation?

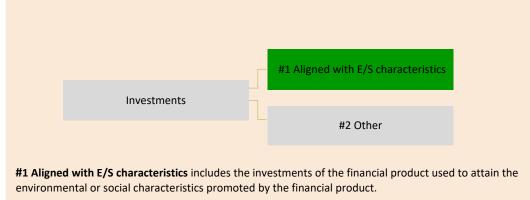

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 89,55% of the portfolio.

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for

Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

## In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Financials	59,53%
Others (e.g. cash, sovereign exposures, diversified)	17,39%
Utilities	6,47%
Communication Services	5,49%
Consumer Discretionary	2,80%
Industrials	1,64%
Health Care	1,61%
Materials	1,31%
Information Technology	1,20%
Real Estate	1,10%
Energy	0,95%
Consumer Staples	0,51%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- capital
  expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

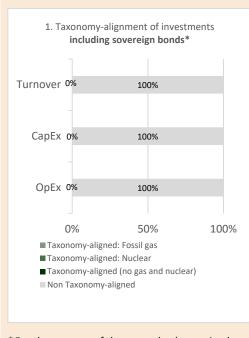

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

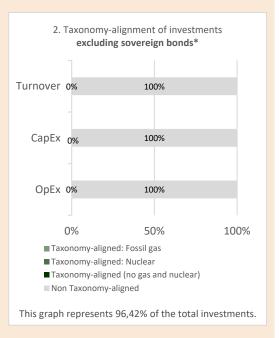

Not applicable.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Not applicable.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes:
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Accordingly to the strategy adopted in order to promote the environmental and/or social characteristics, Azimut Investments S.A.:

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities

under Regulation

(EU) 2020/852.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- excluded any investment in companies operating in sectors that are considered nonsustainable and/or may involve significant environmental and social risks;
- considered the Environmental, Social and Governance scores on each investment alongside the traditional criteria of analysis and evaluation. The ESG score was monitored, both at single investment level and on an aggregate basis;
- calculated and monitored the adverse impact of investments on sustainability factors, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

## How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

## ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AZ bond – Target 2026 Legal entity identifier: 549300MFG7DSOQ6ULN39

# **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective? Yes No It made sustainable It promoted Environmental/Social (E/S) investments with an characteristics and while it did not have as its objective a environmental objective: % sustainable investment, it had a proportion of in economic activities that % of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but did not make any sustainable investments with a social objective: \_\_\_%

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable

investments with an environmental objective might be aligned with the Taxonomy or not.

# To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Sub-Fund committed to promote environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Additionally, the Sub-Fund committed to promote environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

# How did the sustainability indicators perform?

The Sub-Fund committed to promote environmental or social characteristics through the following sustainability indicators:

 <u>Exclusion List:</u> the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover
 Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

- The weighted average "ESG" score of the portfolio: the ESG score is monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment are taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the Azimut Investments ESG Policy.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors is calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager assesses the subset of the PAIs that are considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?"

### ...and compared to previous periods?

Not applicable, since by the end of 2022, the Sub-Fund had no investments in its portfolio.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

# How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs are calculated and monitored, the portfolio manager focuses on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager continuously monitors PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability

impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-

corruption and antibribery matters.

**Principal adverse** 

of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limit on PAIs is set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs are not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

PAI PERFORMANCE INDICATOR		31/12/23
CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS		
	Scope 1 GHG emissions	65705,07
	Scope 2 GHG emissions	10324,80
1. GHG emissions*	Scope 3 GHG emissions	259801,30
	Total GHG emissions	332198,58
2. Carbon footprint*	Carbon footprint	292,81
3. GHG intensity of investee companies*	GHG intensity of investee companies	714,23
4. Exposure to companies active in the fossil fuel sector*	Share of investments in companies active in the fossil fuel sector	7,61%
5. Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	36,27%
6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	0,25

7. Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	0,54%
8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,01
9. Hazardous waste and radioactive waste ratio	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,55
INDICATORS FOR SOCIAL AND EMPLOYER	, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND MATTERS	ANTI-BRIBERY
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises*	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,11%
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,30%
12. Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	5,51%
13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	30,27%
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)*	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0,00%
INDICATORS APPLICABLE 1	O INVESTMENTS IN SOVEREIGNS AND SUPRANATIONALS	
15. GHG intensity of investee countries	GHG intensity of investee countries	37,94
16. Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	4 (9,52%)

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31/12/2023.

# What were the top investments of this financial product?

<sup>\*</sup> The Funds in which the sub fund invested in have a diversified exposure across different sectors.

# What was the proportion of sustainability-related investments?

# What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 85,90% of the portfolio.

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

## In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Financials	49,87%
Others (e.g. cash, sovereign exposures, diversified)	26,23%
Utilities	6,79%
Communication Services	5,01%
Industrials	2,65%
Energy	2,07%
Materials	1,65%
Real Estate	1,65%
Consumer Discretionary	1,55%
Health Care	1,13%
Information Technology	0,92%
Consumer Staples	0,48%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in

To comply with the EU Taxonomy, the criteria for **fossil** gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

directly enable other activities to make a substantial contribution to an

**Enabling activities** 

environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance. the section "How did this financial product consider principal adverse impacts on sustainability factors?".

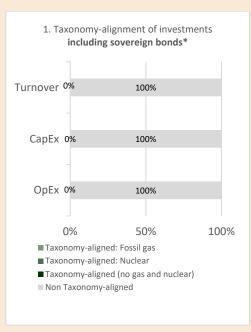

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

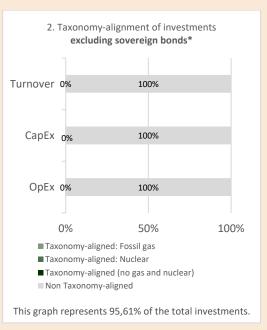

Not applicable.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Taxonomy-aligned activities are expressed as a share of:

- reflecting the share of revenue from green activities of investee companies.
- expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- What was the share of investments made in transitional and enabling activities?
  Not applicable.
- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable, since by the end of 2022, the Sub-Fund had no investments in its portfolio.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Accordingly to the strategy adopted in order to promote the environmental and/or social characteristics, Azimut Investments S.A.:

 excluded any investment in companies operating in sectors that are considered nonsustainable and/or may involve significant environmental and social risks;

- considered the Environmental, Social and Governance scores on each investment alongside the traditional criteria of analysis and evaluation. The ESG score was monitored, both at single investment level and on an aggregate basis;
- calculated and monitored the adverse impact of investments on sustainability factors, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

## How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable

- How did this financial product perform compared with the reference benchmark?

  Not applicable
- How did this financial product perform compared with the broad market index?
  Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** AZ Equity – America

Sustainable investment means

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not include a list of socially sustainable

economic activities.

investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable

an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

Legal entity identifier: 5493000ER7K5A5YSIH21

# **Environmental and/or social characteristics**

Did this financial product have a sustain	Did this financial product have a sustainable investment objective?				
• • Yes	● No				
investments with an environmental objective:%  in economic activities that qualify as environmentally sustainable under the EU Taxonomy  in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 18,05% of sustainable investments  with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  with a social objective				
It made sustainable investments with a social objective:%	It promoted E/S characteristics, but did not make any sustainable investments				

# To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover Adult entertainment: maximum 1.5% of the annual turnover Tobacco: maximum 5.0% of the annual turnover Gambling: maximum 5.0% of the annual turnover Thermal Coal: maximum 20% of the annual turnover controversial weapons: no exposure (Any Tie)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was BBB, equal to the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the Azimut Investments ESG Policy.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 18,05%, more than the committed minimum percentage of 5%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

## ...and compared to previous periods?

% sustainable investments	14,2%	18,05%
Weighted average ESG score of portfolio	AA	BBB
Performance of PAI indicators	Please refer to the section "How did this financial product consider principal adverse impacts on sustainability factors?"	

# What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and
- social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in three ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

# How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS	5	
	Scope 1 GHG emissions	14215,52	18595,46
	Scope 2 GHG emissions	2634,09	4427,17
1. GHG emissions*	Scope 3 GHG emissions	106779,84	174348,29
	Total GHG emissions	123165,04	182571,93
2. Carbon footprint*	Carbon footprint	321,48	324,87
3. GHG intensity of investee companies*	GHG intensity of investee companies	911,99	703,97
4. Exposure to companies active in the fossil fuel sector*	Share of investments in companies active in the fossil fuel sector	14,35%	4,30%
5. Share of non- renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	62,00%	21,56%
6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	0,79	0,10
7. Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	0,00%	0,00%
8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,24	0,00
9. Hazardous waste and radioactive waste ratio	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	1434,45	0,04
INDICATORS FOR SOCIAL	AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRU MATTERS	JPTION AND A	ITI-BRIBERY
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises*	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,00%	0,00%
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	63,39%	0,00%

Multinational Enterprises				
12. Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	3,65%	0,32%	
13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	33,59%	26,72%	
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)*	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0,00%	0,00%	
INDICATORS APPLICABLE TO INVESTMENTS IN SOVEREIGNS AND SUPRANATIONALS				
15. GHG intensity of investee countries	GHG intensity of investee countries	0,00	0,00	
16. Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 (0%)	0 (0%)	

All mandatory PAIs were calculated and monitored. The portfolio manager focused on the prioritization of a specific sub-set of PAIs (marked with "\*" in the above table).

# What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

Largest investments	Sector	% Assets	Country
ELF BEAUTY INC	Consumer Staples	1,31%	UNITED STATES
WINGSTOP INC	Consumer Discretionary	1,09%	UNITED STATES
INFORMATICA INC - CLASS A	Information Technology	1,09%	UNITED STATES
SKYLINE CHAMPION CORP	Consumer Discretionary	1,08%	UNITED STATES
WILLSCOT MOBILE MINI HOLDING	Industrials	1,01%	UNITED STATES
CASELLA WASTE SYSTEMS INC-A	Industrials	0,96%	UNITED STATES
FIVE9 INC	Information Technology	0,95%	UNITED STATES
UFP INDUSTRIES INC	Industrials	0,94%	UNITED STATES

TREX COMPANY INC	Industrials	0,87%	UNITED STATES

# What was the proportion of sustainability-related investments?

describes the share of investments in specific assets.

Asset allocation

## What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 93,64% of the portfolio.

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 18,05% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

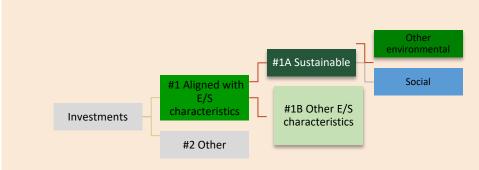

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

# **Enabling activities**

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Industrials	25,22%
Information Technology	15,32%
Financials	13,20%
Consumer Discretionary	12,29%
Health Care	11,58%
Real Estate	5,13%
Materials	4,76%
Consumer Staples	4,44%
Others (e.g. cash, sovereign exposures, diversified)	3,68%
Energy	2,69%
Communication Services	1,17%
Utilities	0,52%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- capital
  expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational
  expenditure
  (OpEx) reflecting
  green operational
  activities of
  investee
  companies.

# To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

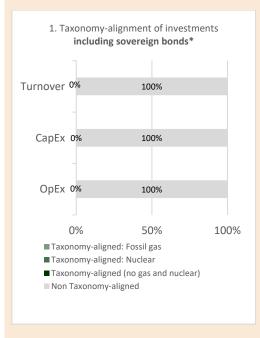

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

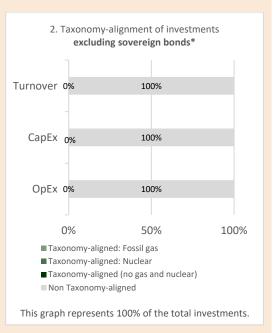

Yes:

In fossil gas
In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

# What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 8,78%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

## What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 9,27%.

# What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation

(EU) 2020/852.

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

# How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** AZ Equity – Borletti Global Lifestyle

# **Environmental and/or social characteristics**

Legal entity identifier: 549300ZVM1AZWA2R8155

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: \_\_\_% sustainable investment, it had a proportion of in economic activities that 49,14% of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: \_\_\_%

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable

economic activities.

investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable

# To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List:</u> the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover Adult entertainment: maximum 1.5% of the annual turnover maximum 5.0% of the annual turnover Gambling: maximum 5.0% of the annual turnover maximum 20% of the annual turnover maximum 20% of the annual turnover controversial weapons: no exposure (Any Tie)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <u>Azimut Investments ESG Policy</u>.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 49,14%, more than the committed minimum percentage of 5%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

## ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	5,3%	49,14%
Weighted average ESG score of portfolio	AAA	А
Performance of PAI indicators	Please refer to the section "How did this financial product consider principal adverse impacts on sustainability factors?"	

# What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and
- social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in three ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

## How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATO	RS	l
	Scope 1 GHG emissions	2857,31	3539,81

investments in specific assets.

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 95,17% of the portfolio.

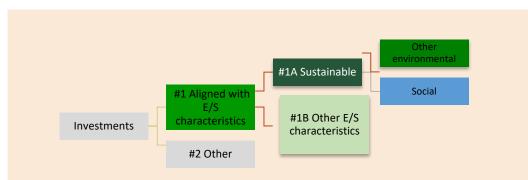

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 49,14% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

• cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;

- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- $\hbox{- The sub-category \#1A Sustainable covers environmentally and socially sustainable investments.}\\$
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Consumer Discretionary	40,00%
Consumer Staples	30,18%
Communication Services	10,46%
Financials	5,91%
Others (e.g. cash, sovereign exposures, diversified)	4,83%
Industrials	3,16%
Information Technology	2,95%
Health Care	2,50%

Some of the GICS sectors may include activities related to fossil fuel related activities. For more information about the involvement in the fossil fuel sector, please refer to PAI 4

"Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

### To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

	Yes:		
		In fossil gas	In nuclear energy
×	No		

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

#### **Enabling activities**

directly enable other activities to make a substantial contribution to an environmental objective.

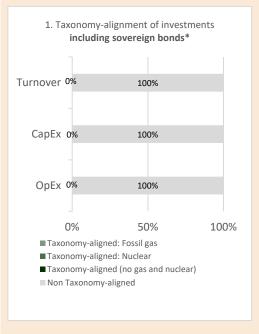

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

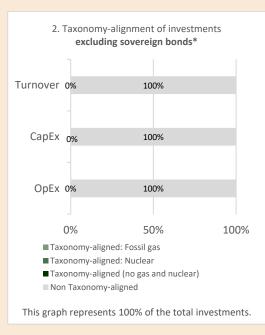

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 22,59%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

#### What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 26,56%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

How does the reference benchmark differ from a broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AZ Equity – Environmental FoF Legal entity identifier: 549300P735VQL5TGW820

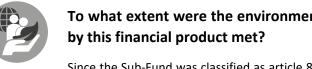

### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: \_\_\_% sustainable investment, it had a proportion of in economic activities that 54,76% of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: \_\_\_%

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a

list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund excluded investments in funds with an ESG rating of CCC or B because their underlying investments were likely to be excessively exposed to issuers with poor ESG performance, and therefore more likely to be usustainable and/or or result in significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

- <u>Exclusions</u>: investments in funds with an ESG rating of CCC or B were excluded because
  their underlying investments were likely to be excessively exposed to issuers with poor
  ESG performance, and therefore more likely to be unsustainable and/or involve
  significant environmental and social risks.
- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

were those having a minimum ESG score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA). On an aggregate basis, the portfolio's average ESG rating as of 31/12/2023 was AA, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the Azimut Investments ESG Policy.

- A minimum percentage in sustainable environmental investment: the share of sustainable environmental investments as of 31/12/2023 was 54,76%, more than the committed minimum percentage of 20%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable environmental investments	50,38%	54,76%
Weighted average ESG score of portfolio	AAA	AA
Performance of PAI indicators	Please refer to the section "How did this financial produc consider principal adverse impacts on sustainability factors?"	

#### What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental objectives: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee

matters, respect for

human rights, anticorruption and anti-

bribery matters.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in two ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second way was through fund selection, which sought to favor, where possible and if available, funds that were classified as Article 9 SFDR or, as a second choice, those classified as Article 8 SFDRs (not precluding the possibility of holding Article 6 SFDR funds in the portfolio as well). The greater the weight of funds classified as Article 9 or 8 SFDR, the greater the containment of PAIs is expected to be.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

The Manager aims to favour, as far as possible and if available, funds classified under Article 9 SFDR or, as a second choice, funds classified under Article 8 SFDR (without excluding the possibility of also holding Article 6 SFDR funds in the portfolio). The greater the weight of Article 9 or 8 SFDR funds, the more compliance with the

Guidelines for Multinational Enterprises and the OECD's UN Guidelines on Business and Human Rights is ensured.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

### How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICAT	ORS	
	Scope 1 GHG emissions	9574,37	4639,21
	Scope 2 GHG emissions	1908,97	1435,59
1. GHG emissions*	Scope 3 GHG emissions	37136,92	26623,53

DWS INV-ESG NXT GEN INFT-TFC	Diversified*	2,37%	LUXEMBOURG

<sup>\*</sup> The Funds in which the sub fund invested in have a diversified exposure across different sectors.

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 95,39% of the portfolio.

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable) "Other environmental", as of 31/12/2023, equal to 54,76% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

# Asset allocation describes the share of investments in specific assets.

#1 Aligned with
E/S
characteristics
#1 B Other E/S
characteristics
#2 Other

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The Sub-Fund is a fund of funds. Therefore, considering that complete information about underlying investments are not always available, there is no direct association between funds and economic sectors.

For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

### To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

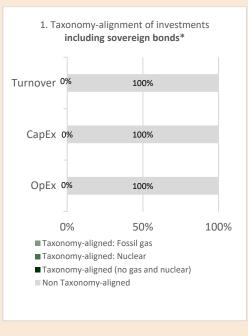

Taxonomy-aligned activities are expressed as a share of:

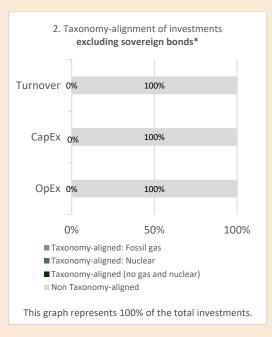

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- capital
  expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

(EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 54,76%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

#### What was the share of socially sustainable investments?

Not applicable.

## What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Accordingly to the strategy adopted in order to promote the environmental and/or social characteristics, Azimut Investments S.A.:

 excluded investments in funds likely to be excessively exposed to issuers with poor ESG performance, and therefore more likely to be unsustainable and/or involve significant environmental and social risks;

- considered the Environmental, Social and Governance scores on each investment alongside the traditional criteria of analysis and evaluation. The ESG score was monitored, both at single investment level and on an aggregate basis;
- ensured a percentage of sustainable investments equal to or greater than 20%;
- calculated and monitored the adverse impact of investments on sustainability factors, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

#### Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AZ Equity - Escalator Legal entity identifier: 549300UJFRCTSPX0GN23

### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: \_\_\_% sustainable investment, it had a proportion of in economic activities that 22,52% of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: \_\_\_%

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation

does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration, which applies to both direct and indirect investments, has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks. The Sub-Fund also excluded investments in funds with an ESG rating of CCC or B because their underlying investments were likely to be excessively exposed to issuers with poor ESG performance, and therefore more likely to be usustainable and/or or result in significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List:</u> the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover

Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

In addition, investments in funds with an ESG rating of CCC or B were excluded because their underlying investments were likely to be excessively exposed to issuers with poor ESG performance, and therefore more likely to be unsustainable and/or involve significant environmental and social risks.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the Azimut Investments ESG Policy.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 22,52%, more than the committed minimum percentage of 5%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	19,1%	22,52%
Weighted average ESG score of portfolio	AA	A
Performance of PAI indicators	Please refer to the section "How did this financial prod consider principal adverse impacts on sustainability factors?"	

#### What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and
- social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in four ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

The fourth way was through fund selection, which sought to favor, where possible and if available, funds that were classified as Article 9 SFDR or, as a second choice, those classified as Article 8 SFDRs (not precluding the possibility of holding Article 6 SFDR funds in the portfolio as well). The greater the weight of funds classified as Article 9 or 8 SFDR, the greater the containment of PAIs is expected to be.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

### How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at

shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS	S	L
	Scope 1 GHG emissions	46382,34	27430,88
	Scope 2 GHG emissions	8613,19	6568,30
1. GHG emissions*	Scope 3 GHG emissions	251892,95	190496,91
	Total GHG emissions	314112,92	220060,88
2. Carbon footprint*	Carbon footprint	367,15	308,96
3. GHG intensity of investee companies*	GHG intensity of investee companies	818,83	724,13
4. Exposure to companies active in the fossil fuel sector*	Share of investments in companies active in the fossil fuel sector	9,06%	7,32%
5. Share of non- renewable energy consumption and production*	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	54,14%	39,91%
6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	0,69	0,33
7. Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	0,08%	0,23%
8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	1,79	0,01
9. Hazardous waste and radioactive waste ratio	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	193,30	0,92

INDICATORS FOR SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND ANTI-BRIBERY MATTERS

		1	1
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises*	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,53%	0,27%
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	42,54%	32,37%
12. Unadjusted gender	Average unadjusted gender pay gap of investee companies	2,50%	2,46%
13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	29,12%	31,83%
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)*	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0,14%	0,13%
INDICATORS APPLICABLE TO INVESTMENTS IN SOVEREIGNS AND SUPRANATIONALS			
15. GHG intensity of investee countries	GHG intensity of investee countries	5,14	23,34
16. Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	6 (12,24%)	4 (10,26%)

All mandatory PAIs were calculated and monitored. The portfolio manager focused on the prioritization of a specific sub-set of PAIs (marked with "\*" in the above table).

<sup>\*</sup> The Funds in which the sub fund invested in have a diversified exposure across different sectors.

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 94,34% of the portfolio.

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 22,52% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

# Asset allocation describes the share of investments in specific assets.

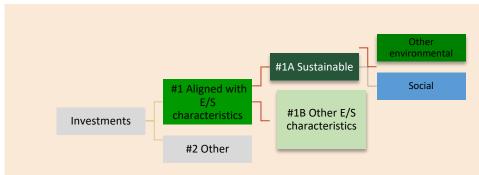

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

#### **Enabling activities**

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Others (e.g. cash, sovereign exposures, diversified)	67,91%
Financials	8,34%
Health care	3,77%
Industrials	3,75%
Utilities	3,39%
Consumer discretionary	2,93%
Information technology	2,70%
Consumer staples	2,37%
Communication services	2,24%
Materials	0,99%
Real estate	0,92%
Energy	0,69%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in

the section "How did this financial product consider principal adverse impacts on sustainability factors?".

### To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

	Yes:		
		In fossil gas	In nuclear energy
*	Nο		

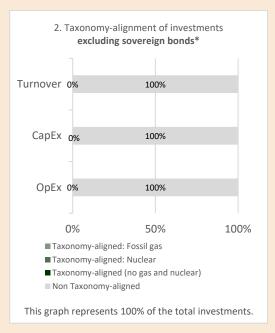

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- capital
  expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 13,92%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

#### What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 8,6%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

How does the reference benchmark differ from a broad market index?
Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AZ Equity – Europe Legal entity identifier: 549300QIXOWXRE8BEW12

### Environmental and/or social characteristics

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) investments with an **characteristics** and while it did not have as its objective a environmental objective: \_\_\_% sustainable investment, it had a proportion of in economic activities that % of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: \_\_\_%

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable

economic activities.

investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the

UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration, which applies to both direct and indirect investments, has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover
 Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

• The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was AA, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <u>Azimut Investments ESG Policy</u>.

• The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ... and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
Weighted average ESG score of portfolio	AA	AA
Performance of PAI indicators	Please refer to the section "How did this financial proconsider principal adverse impacts on sustainability factors?	

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable.

Not applicable.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

**Principal adverse** 

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

### How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at

shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICAT	ORS	
	Scope 1 GHG emissions	18451,52	14795,84
	Scope 2 GHG emissions	1739,97	1981,45

investments in

specific assets.

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 89,12% of the portfolio.

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

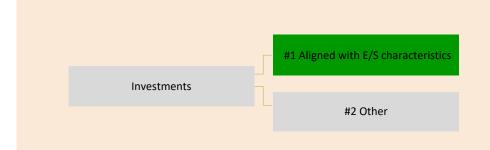

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

# Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2** Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Others (e.g. cash, sovereign exposures, diversified)	17,62%
Industrials	16,17%
Financials	15,49%
Consumer Discretionary	15,21%
Consumer Staples	9,43%
Health Care	8,21%
Information Technology	6,33%
Energy	4,36%
Utilities	3,61%
Communication Services	2,61%
Materials	0,93%
Real Estate	0,04%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

 Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

	Yes:		
		In fossil gas	In nuclear energy
×	No		

share of: turnover reflecting the share of revenue

Taxonomy-aligned activities are expressed as a

What was the share of investments made in transitional and enabling activities? Not applicable.

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

#### How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AZ Equity – Food & Agriculture Legal entity identifier: 5493005CIAM4BN88FP52

### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) investments with an **characteristics** and while it did not have as its objective a environmental objective: \_\_\_% sustainable investment, it had a proportion of in economic activities that % of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: \_\_\_%

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the

UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration, which applies to both direct and indirect investments, has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

• Exclusion List: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover
 Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

• The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was AA, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <u>Azimut Investments ESG Policy</u>.

• The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
Weighted average ESG score of portfolio	AAA	AA
Performance of PAI indicators	Please refer to the section "How did this financial production consider principal adverse impacts on sustainability factors?"	

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

— Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

### How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATO	RS	
	Scope 1 GHG emissions	14589,28	7721,74
	Scope 2 GHG emissions	4006,42	1762,68
1. GHG emissions*	Scope 3 GHG emissions	118750,25	51492,83
	Total GHG emissions	137414,52	59021,58
2. Carbon footprint*	Carbon footprint	694,64	528,94
3. GHG intensity of investee companies*	GHG intensity of investee companies	1054,50	1028,87
4. Exposure to companies active in the fossil fuel sector*	Share of investments in companies active in the fossil fuel sector	2,05%	3,87%
5. Share of non- renewable energy consumption and productiont*	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	72,04%	53,93%
6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	0,897	0,99
7. Activities negatively affecting biodiversitysensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	1,37%	0,00%
8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	8,02	0,00
9. Hazardous waste and radioactive waste ratio*	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,17	0,26

INDICATORS FOR SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND ANTI-BRIBERY MATTERS			
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises*	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,00%	0,00%
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	36,13%	0,00%
12. Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	1,84%	0,70%
13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	30,75%	31,85%
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)*	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0,00%	0,00%
INDICATORS APPLICABLE TO INVESTMENTS IN SOVEREIGNS AND SUPRANATIONALS			
15. GHG intensity of investee countries	GHG intensity of investee countries	0,00	0,00
16. Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 (0%)	0 (0%)

All mandatory PAIs were calculated and monitored. The portfolio manager focused on the prioritization of a specific sub-set of PAIs (marked with "\*" in the above table).

What were the top investments of this financial product?

Largest investments Sector % Assets Country

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

NESTLE SA-REG	Consumer Staples	8,65%	SWITZERLAND
ARCHER-DANIELS-MIDLAND CO	Consumer Staples	5,58%	UNITED STATES
DANONE	Consumer Staples	4,86%	FRANCE
COMPASS GROUP PLC	Consumer Discretionary	4,15%	UNITED KINGDOM

GEA GROUP AG	Industrials	2,71%	GERMANY
TRIMBLE INC	Information Technology	2,68%	UNITED STATES
UNILEVER PLC	Consumer Staples	2,28%	UNITED KINGDOM

specific assets.

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 99,42% of the portfolio.

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

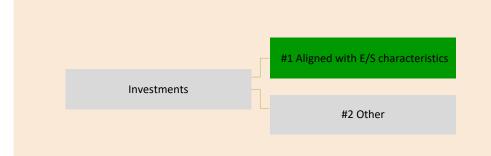

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes:
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Consumer Staples	41,22%
Materials	22,91%
Industrials 16,25%	
Consumer Discretionary	11,53%
Health Care	4,83%
Information Technology	2,68%
Others (e.g. cash, sovereign exposures, diversified)	0,58%

Some of the GICS sectors may include activities related to fossil fuel related activities. For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

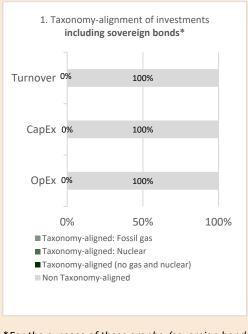

In fossil gas
In nuclear energy

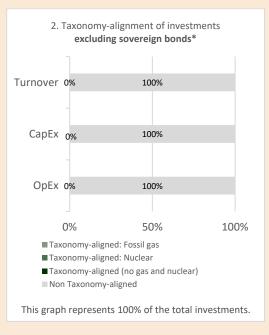

No

Taxonomy-aligned activities are expressed as a share of:

- reflecting the share of revenue from green activities of investee companies.
- capital
  expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- What was the share of investments made in transitional and enabling activities?
  Not applicable.
- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics: and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

# What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** AZ Equity – Global ESG

Legal entity identifier:549300YF3JOWZ26NIC50

### Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?				
Yes	● No			
It made sustainable investments with an environmental objective:%  in economic activities that qualify as environmentally sustainable under the EU Taxonomy  in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 21,09% of sustainable investments  with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  with a social objective			
It made sustainable investments with a social objective:%	It promoted E/S characteristics, but <b>did not</b> make any sustainable investments			

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

# To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund excluded investments in funds with an ESG rating of CCC or B because their underlying investments were likely to be excessively exposed to issuers with poor ESG performance, and therefore more likely to be usustainable and/or or result in significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

- <u>Exclusions</u>: investments in funds with an ESG rating of CCC or B were excluded because
  their underlying investments were likely to be excessively exposed to issuers with poor
  ESG performance, and therefore more likely to be unsustainable and/or involve
  significant environmental and social risks.
- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

were those having a minimum ESG score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA). On an aggregate basis, the portfolio's average ESG rating as of 31/12/2023 was AA, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the Azimut Investments ESG Policy.

- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 21,09%, more than the committed minimum percentage of 5%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	14,59%	21,09%
Weighted average ESG score of portfolio	AAA	AA
Performance of PAI indicators	Please refer to the section "How did this financial product consider principal adverse impacts on sustainability factors?"	

#### What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and
- social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-

corruption and anti-

bribery matters.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in two ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second way was through fund selection, which sought to favor, where possible and if available, funds that were classified as Article 9 SFDR or, as a second choice, those classified as Article 8 SFDRs (not precluding the possibility of holding Article 6 SFDR funds in the portfolio as well). The greater the weight of funds classified as Article 9 or 8 SFDR, the greater the containment of PAIs is expected to be.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

The Manager aims to favour, as far as possible and if available, funds classified under Article 9 SFDR or, as a second choice, funds classified under Article 8 SFDR (without excluding the possibility of also holding Article 6 SFDR funds in the portfolio). The greater the weight of Article 9 or 8 SFDR funds, the more compliance with the Guidelines for Multinational Enterprises and the OECD's UN Guidelines on Business and Human Rights is ensured.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

### How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing

those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS			
	Scope 1 GHG emissions	17784,26	9976,56
	Scope 2 GHG emissions	5451,83	3834,36
1. GHG emissions*	Scope 3 GHG emissions	171934,77	99030,30
	Total GHG emissions	204061,66	109149,37
2. Carbon footprint*	Carbon footprint	473,32	261,25
3. GHG intensity of investee companies*	GHG intensity of investee companies	899,79	597,85
4. Exposure to companies active in the fossil fuel sector*	Share of investments in companies active in the fossil fuel sector	10,69%	6,27%
5. Share of non- renewable energy consumption and production*	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	66,58%	39,75%
6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	0,92	0,29
7. Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	0,00%	0,05%
8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,85	0,00
9. Hazardous waste and radioactive waste ratio	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	154,74	0,50

INDICATORS FOR SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND ANTI-BRIBERY MATTERS

10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises*	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,43%	0,12%
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	41,08%	40,04%
12. Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	2,10%	2,47%
13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	30,93%	31,73%

<sup>\*</sup> The Funds in which the sub fund invested in have a diversified exposure across different sectors.

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 90,02% of the portfolio.

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 21,09% of the overall investments (#Investments).

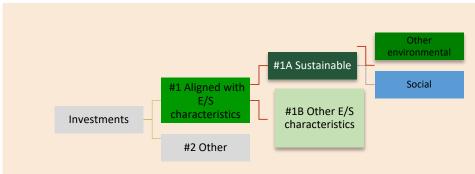

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and

Asset allocation describes the share of investments in specific assets.

securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The Sub-Fund is a fund of funds. Therefore, considering that complete information about underlying investments are not always available, there is no direct association between funds and economic sectors.

For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

### To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional

activities are
activities for which
low-carbon
alternatives are not
yet available and
among others have
greenhouse gas
emission levels
corresponding to the
best performance.

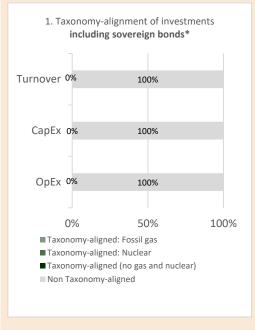

Taxonomy-aligned activities are expressed as a share of:

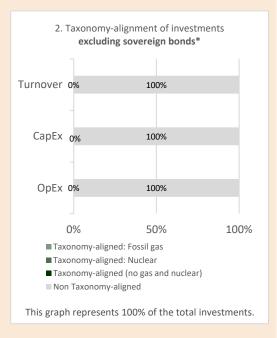

- reflecting the share of revenue from green activities of investee companies.
- expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 13,78%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

#### What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 7,31%.

# What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

According to the strategy adopted in order to promote the environmental and/or social characteristics, Azimut Investments S.A.:

 excluded investments in funds likely to be excessively exposed to issuers with poor ESG performance, and therefore more likely to be unsustainable and/or involve significant environmental and social risks;

- considered the Environmental, Social and Governance scores on each investment alongside the traditional criteria of analysis and evaluation. The ESG score was monitored, both at single investment level and on an aggregate basis;
- ensured a percentage of sustainable investments equal to or greater than 5%;
- calculated and monitored the adverse impact of investments on sustainability factors, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?

  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

#### Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AZ Equity – Global Growth Legal entity identifier: 549300KSMK58M1M46H55

### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: \_\_\_% sustainable investment, it had a proportion of in economic activities that 42,47% of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: \_\_\_%

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

# To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover
 Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <u>Azimut Investments ESG Policy</u>.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 42,47%, more than the committed minimum percentage of 10%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	18,31%	42,47%
Weighted average ESG score of portfolio	AA	A
Performance of PAI indicators	Please refer to the section "How did this financial product consider principal adverse impacts on sustainability factors?"	

#### What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and
- social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in three ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

### How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATO	RS	l
	Scope 1 GHG emissions	1773,25	2402,88

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 96,11% of the portfolio.

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 42,47% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

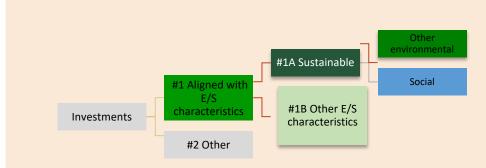

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

Asset allocation describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Information Technology	37,48%
Consumer Discretionary	15,03%
Communication Services	12,10%
Industrials	10,01%
Health Care	7,58%
Financials	7,03%
Consumer Staples	4,89%
Others (e.g. cash, sovereign exposures, diversified)	3,63%
Energy	1,46%
Real Estate	0,81%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

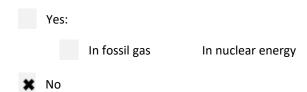

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- capital
  expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

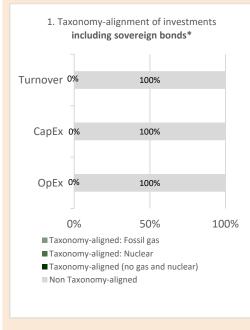

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

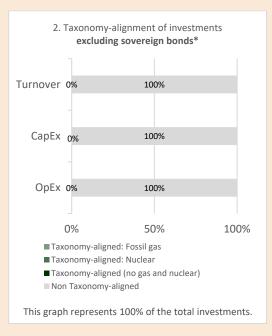

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

<sup>\*</sup>For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 29,99%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 12,48%.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** AZ Equity – Global Healthcare

Sustainable investment means

practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not include a list of socially sustainable

economic activities.

investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable

an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

Legal entity identifier: 549300ZYVOVSK1UN1R51

### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective?					
Yes	● No				
It made sustainable investments with an environmental objective:%  in economic activities that qualify as environmentally sustainable under the EU Taxonomy  in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 42,33% of sustainable investments  with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  with a social objective				
It made sustainable investments with a social objective:%	It promoted E/S characteristics, but <b>did not make any sustainable investments</b>				

### To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover Adult entertainment: maximum 1.5% of the annual turnover Tobacco: maximum 5.0% of the annual turnover Gambling: maximum 5.0% of the annual turnover Thermal Coal: maximum 20% of the annual turnover controversial weapons: no exposure (Any Tie)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the Azimut Investments ESG Policy.
- A minimum percentage in socially sustainable investment: the share of sustainable investments as of 31/12/2023 was 42,33%, more than the committed minimum percentage of 15%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% socially sustainable investments	26,49%	42,33%
Weighted average ESG score of portfolio	AAA	А
Performance of PAI indicators	ors Please refer to the section "How did this finance consider principal adverse impacts on sustainability for	

#### What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following social objectives: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure

operational integrity based on strong management practices and comply with applicable norms, including tax laws.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in three ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

standards, improve their practices, and minimize the PAIs on the environment and society.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

### How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATO	RS	

	Scope 1 GHG emissions	437,51	176,22
	Scope 2 GHG emissions	520,30	180,31
1. GHG emissions*	Scope 3 GHG emissions	11181,16	9341,72
	Total GHG emissions	12118,34	9498,44
2. Carbon footprint*	Carbon footprint	98,65	81,84
3. GHG intensity of investee companies*	GHG intensity of investee companies	360,25	343,04
4. Exposure to companies active in the fossil fuel sector*	Share of investments in companies active in the fossil fuel sector	0,00%	0,00%
5. Share of non- renewable energy consumption and production*	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	71,10%	52,52%
6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	0,085	0,05
7. Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	0,00%	0,27%
8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,04	0,01
9. Hazardous waste and radioactive waste ratio*	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,12	0,09
INDICATORS FOR SOCIA	AL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORF MATTERS	RUPTION AND AI	NTI-BRIBERY
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,00%	0,00%
Multinational Enterprises*			
Multinational	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	43,74%	0,00%

13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	30,16%	35,17%
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)*  Share of investments in investee companies involved in the manufacture or selling of controversial weapons		0,00%	0,00%
INDICAT	ORS APPLICABLE TO INVESTMENTS IN SOVEREIGNS AND SUP	RANATIONALS	
15. GHG intensity of investee countries	GHG intensity of investee countries	0,00	0,00
16. Investee countries subject to social	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where	0 (0%)	0 (0%)

All mandatory PAIs were calculated and monitored. The portfolio manager focused on the prioritization of a specific sub-set of PAIs (marked with "\*" in the above table).

#### What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

Largest investments	Sector	% Assets	Country
UNITEDHEALTH GROUP INC	Health Care	6,69%	UNITED STATES
JOHNSON & JOHNSON	Health Care	6,67%	UNITED STATES
ELI LILLY & CO	Health Care	6,26%	UNITED STATES
US TREASURY BILL 0% 23-11/04/2024	Others	5,23%	UNITED STATES
MERCK & CO. INC.	Health Care	4,62%	UNITED STATES
ABBVIE INC	Health Care	4,07%	UNITED STATES
NOVO NORDISK A/S-B	Health Care	4,01%	DENMARK
ROCHE HOLDING AG-GENUSSCHEIN	Health Care	3,78%	SWITZERLAND
ASTRAZENECA PLC	Health Care	3,72%	UNITED KINGDOM
DANAHER CORP	Health Care	3,68%	UNITED STATES
THERMO FISHER SCIENTIFIC INC	Health Care	3,46%	UNITED STATES
HUMANA INC	Health Care	3,41%	UNITED STATES
BOSTON SCIENTIFIC CORP	Health Care	3,06%	UNITED STATES

GSK PLC	Health Care	2,00%	UNITED KINGDOM
VERTEX PHARMACEUTICALS INC	Health Care	1,94%	UNITED STATES

#### What was the proportion of sustainability-related investments?

# Asset allocation describes the share of investments in specific assets.

#### What was the asset allocation?

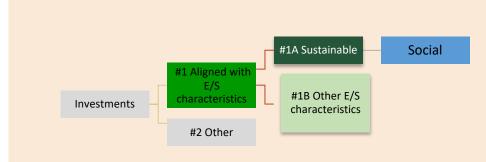

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 99,57% of the portfolio.

In addition the Sub-Fund made a proportion of socially sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 42,33% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Health Care	88,09%
Others (e.g. cash, sovereign exposures, diversified)	5,66%
Consumer Staples	4,46%
Materials	1,02%
Consumer Discretionary	0,77%

Some of the GICS sectors may include activities related to fossil fuel related activities. For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

### To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

#### **Enabling activities**

directly enable other activities to make a substantial contribution to an environmental objective.

#### activities for which low-carbon alternatives are not yet available and among others have

**Transitional** 

activities are

emission levels corresponding to the best performance.

greenhouse gas

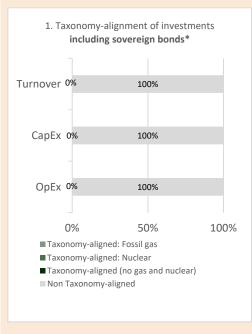

Taxonomy-aligned activities are expressed as a share of:

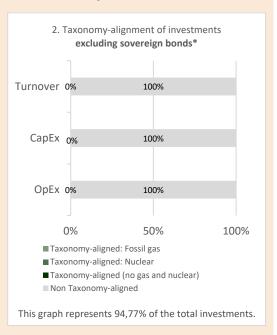

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

#### What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 42,33%.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** AZ Equity – Global Infrastructure

Legal entity identifier: 5493005GNSYGCYXE3809

### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective?			
Yes	● ○ 🗶 No		
It made sustainable investments with an environmental objective:%  in economic activities that qualify as environmentally sustainable under the EU Taxonomy  in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<ul> <li>It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 41,65% of sustainable investments</li> <li>with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li>with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li>with a social objective</li> </ul>		
It made sustainable investments with a social objective:%	It promoted E/S characteristics, but did not make any sustainable investments		

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover
 Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was AA, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <u>Azimut Investments ESG Policy</u>.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 41,65%, more than the committed minimum percentage of 5%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	14,4%	41,65%
Weighted average ESG score of portfolio	AAA	AA
Performance of PAI indicators	Please refer to the section "How did this financial product consider principal adverse impacts on sustainability factors?"	

#### What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental objectives: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in three ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

 Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	31/12/22	31/12/23	
CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS			
	Scope 1 GHG emissions	62132,82	43532,12
1. GHG emissions*	Scope 2 GHG emissions	5180,15	3922,38

\* The Funds in which the sub fund invested in have a diversified exposure across different sectors.

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

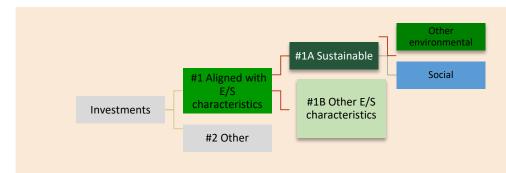

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 99,86% of the portfolio.

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 41,65% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes:
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Utilities	43,22%
Communication Services	21,94%
Energy	15,84%
Industrials	7,82%
Others (e.g. cash, sovereign exposures, diversified)	4,64%
Real Estate	4,21%
Health Care	1,37%
Financials	0,97%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", "Energy", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

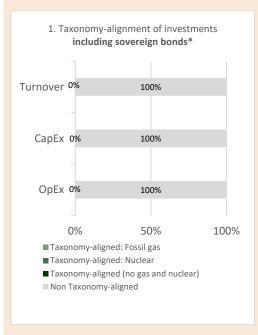

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

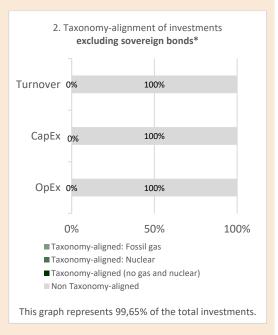

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

#### What was the share of investments made in transitional and enabling activities?

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 30,53%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

#### What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 11,12%.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes:
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut

are
sustainable
investments with an
environmental
objective that do
not take into
account the criteria
for environmentally
sustainable
economic activities
under Regulation

(EU) 2020/852.

Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?"

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AZ Equity - Small Cap Europe FoF Legal entity identifier: 549300L7J1GDJPIO3063

### Environmental and/or social characteristics

Did this financial product have a sustainable investment objective? Yes It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: \_\_\_% sustainable investment, it had a proportion of in economic activities that % of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do with an environmental objective in not qualify as environmentally economic activities that do not qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: \_\_\_%

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

# To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund excluded investments in funds with an ESG rating of CCC or B because their underlying investments were likely to be excessively exposed to issuers with poor ESG performance, and therefore more likely to be usustainable and/or or result in significant environmental and social risks.

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

- <u>Exclusions</u>: investments in funds with an ESG rating of CCC or B were excluded because
  their underlying investments were likely to be excessively exposed to issuers with poor
  ESG performance, and therefore more likely to be unsustainable and/or involve
  significant environmental and social risks.
- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum ESG score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA). On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the Azimut Investments ESG Policy.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Not applicable.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

### How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23	
CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

investments in

specific assets.

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 82,86% of the portfolio.

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

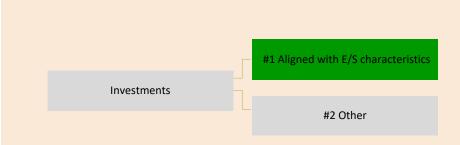

Enabling activities directly enable other activities to make a substantial contribution to an environmental

objective.

Transitional

activities are
activities for which
low-carbon
alternatives are not
yet available and
among others have
greenhouse gas
emission levels
corresponding to the
best performance.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

#### In which economic sectors were the investments made?

The Sub-Fund is a fund of funds. Therefore, considering that complete information about underlying investments are not always available, there is no direct association between funds and economic sectors.

For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

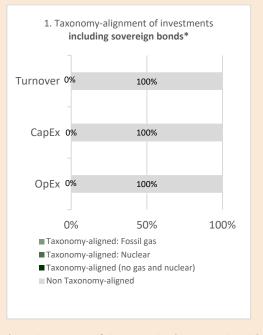

Taxonomy-aligned activities are expressed as a share of:

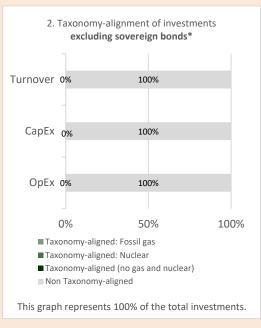

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- capital
   expenditure
   (CapEx) showing
   the green
   investments made
   by investee
   companies, e.g. for
   a transition to a
   green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What was the share of investments made in transitional and enabling activities?
  Not applicable.
- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

#### What was the share of socially sustainable investments?

Not applicable.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Accordingly to the strategy adopted in order to promote the environmental and/or social characteristics, Azimut Investments S.A.:

- excluded investments in funds likely to be excessively exposed to issuers with poor ESG performance, and therefore more likely to be unsustainable and/or involve significant environmental and social risks;
- considered the Environmental, Social and Governance scores on each investment alongside the traditional criteria of analysis and evaluation. The ESG score was monitored, both at single investment level and on an aggregate basis;
- calculated and monitored the adverse impact of investments on sustainability factors, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

Reference
benchmarks are

social
characteristics that
they promote.

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** AZ Equity - Water & Renewable Resources

Legal entity identifier: 549300FLDIOCFJZ18Q44

### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective?				
• • Yes	● ○ 🗶 No			
It made sustainable investments with an environmental objective:%  in economic activities that qualify as environmentally sustainable under the EU Taxonomy  in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 58,43% of sustainable investments  with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  with a social objective			
It made sustainable investments with a social objective:%	It promoted E/S characteristics, but <b>did not</b> make any sustainable investments			

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation

does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover
 Adult entertainment: maximum 1.5% of the annual turnover
 Tobacco: maximum 5.0% of the annual turnover
 Gambling: maximum 5.0% of the annual turnover
 Thermal Coal: maximum 20% of the annual turnover
 Controversial weapons: no exposure (Any Tie)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was was AA, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the Azimut Investments ESG Policy.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 58,43%, more than the committed minimum percentage of 25%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	45,0%	58,43%
Weighted average ESG score of portfolio	AAA	AA
Performance of PAI indicators	Please refer to the section "How did this financial product consider principal adverse impacts on sustainability factors?"	

#### What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and
- social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in three ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

## How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS		
	Scope 1 GHG emissions	22137,27	21052,98
	Scope 2 GHG emissions	2599,88	2332,26
1. GHG emissions*	Scope 3 GHG emissions	37152,56	52091,56
	Total GHG emissions	61390,09	67872,60
2. Carbon footprint*	Carbon footprint	314,37	320,09
3. GHG intensity of investee companies*	GHG intensity of investee companies	816,01	833,89
4. Exposure to companies active in the fossil fuel sector*	Share of investments in companies active in the fossil fuel sector	7,51%	4,03%
5. Share of non- renewable energy consumption and production*	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	64,17%	48,51%
6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	0,94	0,54
7. Activities negatively affecting biodiversitysensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	0,00%	0,00%
8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,00	0,00
9. Hazardous waste and radioactive waste ratio*	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,95	1,16
INDICATORS FOR SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND ANTI-BRIBERY MATTERS			
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises*	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,00%	0,00%
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	56,84%	0,00%

Multinational Enterprises			
12. Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	3,21%	0,78%
13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	33,83%	38,02%
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)*	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0,00%	0,00%
INDICAT	ORS APPLICABLE TO INVESTMENTS IN SOVEREIGNS AND SUP	RANATIONALS	
15. GHG intensity of investee countries	GHG intensity of investee countries	5,16	0,00
16. Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 (0%)	0 (0%)

All mandatory PAIs were calculated and monitored. The portfolio manager focused on the prioritization of a specific sub-set of PAIs (marked with "\*" in the above table).

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

What were the top investments of this financial product?

Largest investments	Sector	% Assets	Country
XYLEM INC	Industrials	9,05%	UNITED STATES
WASTE MANAGEMENT INC	Industrials	6,92%	UNITED STATES
REPUBLIC SERVICES INC	Industrials	6,32%	UNITED STATES
FERGUSON PLC	Industrials	5,93%	UNITED KINGDOM
GEBERIT AG-REG	Industrials	5,66%	SWITZERLAND
AMERICAN WATER WORKS CO INC	Utilities	4,96%	UNITED STATES
PENTAIR PLC	Industrials	4,83%	UNITED KINGDOM
GRACO INC	Industrials	3,85%	UNITED STATES
TETRA TECH INC	Industrials	3,70%	UNITED STATES
VEOLIA ENVIRONNEMENT	Utilities	3,13%	FRANCE
UNITED UTILITIES GROUP PLC	Utilities	3,11%	UNITED KINGDOM
WATTS WATER TECHNOLOGIES-A	Industrials	2,10%	UNITED STATES
SEVERN TRENT PLC	Utilities	2,09%	UNITED KINGDOM
CLEAN HARBORS INC	Industrials	2,01%	UNITED STATES
FLOWSERVE CORP	Industrials	1,93%	UNITED STATES

#### What was the proportion of sustainability-related investments?

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 99,8% of the portfolio.

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 58,43% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

• cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

#### **Enabling activities**

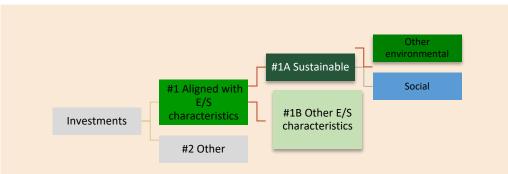

directly enable other activities to make a substantial contribution to an environmental objective.

### Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- $\hbox{- The sub-category \#1A Sustainable covers environmentally and socially sustainable investments.}\\$
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Industrials	69,61%
Utilities	21,70%
Health Care	2,91%
Materials	2,32%
Information Technology	2,06%
Consumer Staples	0,90%
Consumer Discretionary	0,30%
Others (e.g. cash, sovereign exposures, diversified)	0,20%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", etc.). For more information about the involvement in the fossil fuel sector,

please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

### To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Did the financial product invest in fossil gas and/or nuclear energy related

activities complying with the EU Taxonomy¹?

Yes:

In fossil gas In nuclear energy

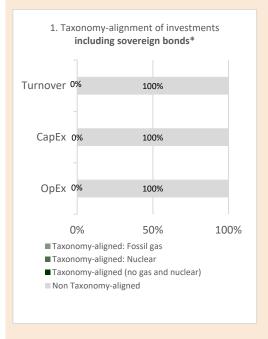

No

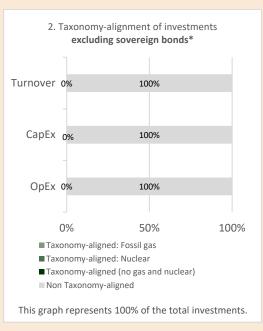

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 49,94%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 8,49%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

How does the reference benchmark differ from a broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

#### ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** AZ Equity – World Minimum Volatility

Legal entity identifier: 5493003DIJMWFZKP6S84

### **Environmental and/or social characteristics**

Did this financial product have a sustainable investment objective?			
Yes	• No		
investments with an environmental objective:%  in economic activities that qualify as environmentally sustainable under the EU Taxonomy  in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<ul> <li>It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 29,39% of sustainable investments</li> <li>with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li>with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li>with a social objective</li> </ul>		
It made sustainable investments with a social objective:%	It promoted E/S characteristics, but did not make any sustainable investments		

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

The Sub-Fund promoted environmental and social characteristics by integrating ESG (Environmental, Social and Governance) factors into the investment process. As reported by the UN PRI, ESG integration is "the systematic and explicit inclusion of material ESG factors into investment analysis and investment decisions".

ESG integration has a positive fallout on the environment and society, as companies with the best environmental and social practices are favored over those with lower standards.

Companies with the best ratings on the environmental pillar tend to adopt better standards and devote much attention to issues such as: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint; climate change vulnerability); natural resources (in terms for example of water stress, Biodiversity & Land Use); pollution & waste prevention (with reference to toxic emissions & waste; packaging material & waste; electronic waste); environmental opportunities (in clean tech; in renewable energy).

Companies with the best ratings on the social pillar tend to adopt better standards and devote much attention to issues such as: human capital (labor management; health & safety; human capital development; supply chain labor standards); product liability (product safety & quality; chemical safety; consumer financial protection; privacy & data security; responsible investment; health & demographic risk); social opportunities (access to communications; access to finance; access to health care; opportunities in nutrition & health); stakeholder opposition (controversial sourcing; community relations).

In addition to the positive impacts on environmental and social aspects, ESG integration also enables better long-term financial returns on investments, as well as higher risk-adjusted returns and long-term profitability, since companies with sound ESG practices have higher revenue and profit growth, lower volatility, higher productivity and lower costs, are less exposed to regulatory risks, fines, and sanctions.

Additionally, the Sub-Fund promoted environmental and social characteristics by preventing any investment in companies operating in sectors that are considered non-sustainable and/or may involve significant environmental and social risks.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Additional information about the environmental and social objective to which the sustainable investment contributed can be found in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

#### How did the sustainability indicators perform?

The environmental or social characteristics promoted were attained through the following sustainability indicators:

 <u>Exclusion List</u>: the Sub-Fund complies with the exclusion policy. The portfolio manager did not invest in companies whose share of turnover from the following activities exceeded the specified thresholds:

Nuclear weapons: maximum 1.5% of the annual turnover Adult entertainment: maximum 1.5% of the annual turnover Tobacco: maximum 5.0% of the annual turnover Gambling: maximum 5.0% of the annual turnover Thermal Coal: maximum 20% of the annual turnover controversial weapons: no exposure (Any Tie)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The weighted average "ESG" score of the portfolio: the ESG score was monitored, both at single investment level and on an aggregate basis. Environmental, Social and Governance scores on each investment were taken into consideration alongside the traditional criteria of analysis and evaluation. At single investment level, investments aligned with the environmental and social characteristics promoted by the Sub-Funds were those having a minimum score equal or greater than "BB" (considering the following ascending order CCC, B, BB, BBB, A, AA, AAA) on the "Environmental" or "Social" pillars. On an aggregate basis, the average ESG rating at the portfolio level was A, more than the committed minimum rating of BBB. Doing so, the portfolio manager ensured that Sub-Fund was financially efficient and as much sustainable as possible on a continuous basis. The ESG rating is calculated using MSCI ESG Research data and methodology. Additional information could be found in the <a href="https://example.com/Azimut Investments">Azimut Investments ESG Policy</a>.
- <u>A minimum percentage in sustainable investment</u>: the share of sustainable investments as of 31/12/2023 was 29,39%, more than the committed minimum percentage of 7,5%.
- The consideration of Principal Adverse Impacts (PAIs): the adverse impact of investments on sustainability factors were calculated and monitored, focusing on a specific sub-set of PAIs. The portfolio manager made the assessment of the subset of the PAIs that were considered first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately. Additional information about PAIs performance can be found in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

#### ...and compared to previous periods?

Sustainability Indicator	Value as of 31/12/2022	Value as of 31/12/2023
% sustainable investments	14,0%	29,39%
Weighted average ESG score of portfolio	AA	A
Performance of PAI indicators	Please refer to the section "How did this financial product consider principal adverse impacts on sustainability factors?"	

#### What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Sustainable investments generated a positive contribution of at least 20% of their revenues to one or more of the following environmental or social objectives:

- environmental objective: climate change mitigation and energy efficiency, pollution prevention and waste minimization, sustainable management of water, forestry and land resources, and
- social objective: accessing to basic needs, such as health care, housing, and nutrition, provision of SME and personal loans, education services and bridging the digital in least developed countries.

In addition only investee companies that comply with good governance practices are eligible to be considered as sustainable investments. The good governance practice are assessed in terms of companies' ability to sustainably manage resources, including human capital, ensure operational integrity based on strong management practices and comply with applicable norms, including tax laws.

Due to the temporary lack of accessibility to the Taxonomy-related data, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

To undertake this analysis, the portfolio's manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Additional information could be found in the Azimut Investments ESG Policy.

# How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments were focused on generating positive contribution to one or more objectives do not significantly harming any other environmental or social objective in terms of assessing the potential negative impact on them. To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI) to test the DNSH principle.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts were also used, to the extent that reliable date was available, to test the DNSH principle. To undertake this analysis, the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

Adverse impacts on sustainability factors were taken into account by Azimut Investments S.A. and mitigated in three ways.

The first was through the integration of ESG factors into the investment process: companies with high E, S and G ratings normally have lower principal adverse impacts (in absolute terms and/or in relation to their industry) due to higher standards/better operating practices.

The second was through the application of the exclusion policy, which prohibits investment in companies operating in sectors that are considered as non-sustainable and/or may involve significant environmental and social risks. For example, in the case of PAI 14 ("Exposure to controversial weapons"), adverse impacts were minimized through the simple application of the exclusion lists, considering that among the excluded investments are those in companies exposed to controversial weapons. Moreover, exclusions criteria were applied also on a subset of other PAIs. Additional information could be found in the website disclosure.

The third way was through active ownership. Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was based on investee company's exposure to costroversies. An investee company's involvement in serious and widespread controversies may indicate a violation of OECD Guidelines for Multinational Enterprises and/or UNGC Principles and therefore cannot be considered a sustainable investment.

As a part of the internal assessment provided by the portfolio manager, controversies marked with a red flag indicate a company's direct involvement in the most serious adverse impacts (e.g., loss of life, destruction of eco-system, economic shakedown affecting multiple jurisdictions), which have not yet been mitigated to the satisfaction of all implicated stakeholders.

An orange flag may indicate either only partial resolution of such serious concerns with implicated stakeholders, or an indirect role of the company in very serious and extensive controversies (for example through business relationships with directly implicated parties).

As of 31/12/2023 there are no investee companies that are considered sustainable investments marked with an orange or a red flag.

To undertake this analysis the portfolio manager used data provided by external ESG research providers' proprietary models (e.g. MSCI).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

## How did this financial product consider principal adverse impacts on sustainability factors?

Whereas all mandatory PAIs were calculated and monitored, the portfolio manager focused on the prioritization of a specific sub-set of PAIs.

The Sub-Fund's portfolio manager monitored PAIs data through an ad-hoc tool where PAIs values can be consulted both at position and aggregate level, in order to consider them in the investment decision-making process along with ESG scores and traditional financial metrics. However, considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no thresholds or stringent limits were set.

The first reason why no stringent limits on PAIs were set, is that the percentage of companies reporting on PAIs was still very low, and it is reasonable to expect that new companies will begin to report data on PAIs in the future. Since portfolio-level PAIs are calculated only on companies that publish relevant data, it is possible that over time the value of portfolio-level PAIs may rise as companies begin reporting. In this case, the increase in the value at the portfolio level of PAIs does not necessarily imply that the portfolio is invested in companies with worse adverse impacts, but rather simply be an effect of increased coverage. The portfolio manager, therefore, assessed the evolution of PAIs adjusted for the distorting effect caused by the increased coverage.

An additional reason why stringent limits on PAIs were not set is that focusing only on the absolute value of the PAI can lead to suboptimal choices in terms of sustainability, especially if companies have embarked on a path to improve their practices, as PAIs are precisely a backward-looking indicator. The most important reduction in adverse impacts is possible precisely by incentivizing those companies that today have low operating standards and therefore high adverse impacts, to improve their practices by supporting them financially in the transition, and exercising our duty as responsible investor by steering the strategic business decisions of investee companies through active ownership in such a way as (inter-alia) to reduce the companies' adverse impacts.

To this end, Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. is able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution are cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

It is also possible that investee companies may over the years experience instances where one or more of their PAIs rise rather than fall. The portfolio manager made the assessment of the PAIs first at the aggregate level to determine the overall sustainability path of the company, and second on each PAI separately.

The value of principal adverse impacts on sustainability factors is represented below:

	PAI PERFORMANCE INDICATOR	31/12/22	31/12/23
	CLIMATE AND OTHER ENVIRONMENT-RELATED INDICAT	ORS	
	Scope 1 GHG emissions	15462,66	11906,44
	Scope 2 GHG emissions	1885,56	1215,09
1. GHG emissions*	Scope 3 GHG emissions	54295,60	35658,27
	Total GHG emissions	73497,38	48418,24

Board gender diversity	violations of the UNGC principles or OECD Guidelines for Multinational Enterprises  Average unadjusted gender pay gap of investee companies  Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	1,26% 27,40%	2,32%
14. Exposure to controversial weapons (antipersonnel mines, cluster munitions, chemical weapons and biological weapons)*	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0,02%	0,00%
INDICA	TORS APPLICABLE TO INVESTMENTS IN SOVEREIGNS AND SU	JPRANATIONALS	
15. GHG intensity of investee countries	GHG intensity of investee countries	7,79	0,00
16. Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 (0%)	0 (0%)

All mandatory PAIs were calculated and monitored. The portfolio manager focused on the prioritization of a specific sub-set of PAIs (marked with "\*" in the above table).

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is:
Since the Sub-Fund was classified as article 8 at the end of the reporting year, the following data refer to 31/12/2023.

#### What were the top investments of this financial product?

Largest investments	Sector	% Assets	Country
ITALY BOTS 0% 23-14/03/2024	Others	3,33%	ITALY
ITALY BOTS 0% 23-14/02/2024	Others	2,78%	ITALY

#### What was the asset allocation?

In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments aligned with environmental and social characteristics (#1Aligned with E/S characteristics), as of 31/12/2023, was 96,19% of the portfolio.

In addition the Sub-Fund made a proportion of sustainable investments (#1A Sustainable), as of 31/12/2023, equal to 29,39% of the overall investments (#Investments).

The remaining portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes;
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

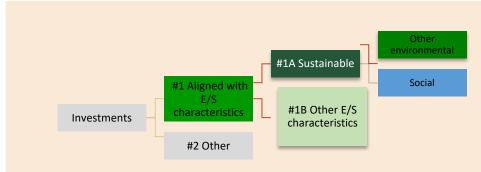

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multi-national Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

# **Enabling activities** directly enable other activities to

other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

The proportion of investments as of 31/12/2023 of investments in different economic sectors was the following:

Sector (GICS code)	Proportion
Health Care	16,24%
Information Technology	15,42%
Financials	11,78%
Consumer Staples	11,63%
Communication Services	10,86%
Others (e.g. cash, sovereign exposures, diversified)	9,92%
Industrials	8,29%
Utilities	7,39%
Consumer Discretionary	4,88%
Energy	2,11%
Materials	1,49%

Some of the GICS sectors may include activities related to fossil fuel related activities (for example "Utilites", etc.). For more information about the involvement in the fossil fuel sector, please refer to PAI 4 "Exposure to companies active in the fossil fuel sector" in the section "How did this financial product consider principal adverse impacts on sustainability factors?".

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned activities are expressed as a share of:

- turnover
   reflecting the
   share of revenue
   from green
   activitiesof
   investee
   companies.
- capital
  expenditure
  (CapEx) showing
  the green
  investments made
  by investee
  companies, e.g. for
  a transition to a
  green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

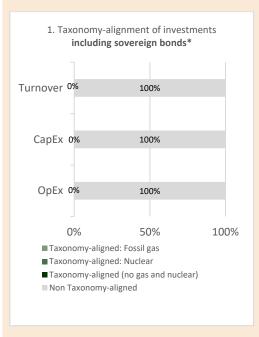

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was 0.0%.

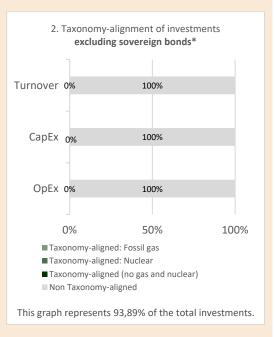

Due to the temporary lack of accessibility to the Taxonomy reported, it has not been possibile to distinguish the environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which sustainable investments contributed.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

<sup>\*</sup>For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

#### What was the share of investments made in transitional and enabling activities?

<sup>&</sup>lt;sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The share of investments made in transitional and enabling activities was 0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The share of investment in environmentally sustainable economic activities in line with the EU Taxonomy was still 0.0%.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy, as of 31/12/2023, was 17,17%. The Sub-Fund invested in economic activities that were not Taxonomy-aligned due to the absence of reliable data and weak data coverage related to Taxonomy alignment.

#### What was the share of socially sustainable investments?

The share of socially sustainable investments, as of 31/12/2023, was 12,23%.

# What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The portion of the investments not included in the investments for promoting environmental or social characteristics or in the classification of sustainable investment (#2 Other) w was limited only to one or more of the following:

- cash and cash equivalent instruments held as ancillary liquidity or for risk balancing purposes:
- derivatives held for investment purposes in order to implement its investment policy and/or for risk hedging purposes, but not to promote environmental and/or social characteristics; and
- securities for which relevant data was not available or, if available, does not meet the minimum criteria established by the binding elements.

In terms of minimum environmental and social safeguards, the portfolio manager monitored any relevant aspect for each investee company including violation to OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights via third party data.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Azimut Investments S.A. has retained Institutional Shareholder Services, Inc. ("ISS"), an independent third-party proxy voting service provider. ISS provides Azimut Investments S.A. with research, voting recommendations and support in relation with voting activities. Azimut

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Investments S.A. has subscribed the ISS "Sustainability Policy" which is specifically designated for PRI signatories. Through its partnership with ISS, Azimut Investments S.A. was able to vote at shareholder meetings of investee companies. As ISS's Sustainability Policy is in line with the United Nations' Principles for Responsible Investment (PRI), votes at each resolution were cast in a way intended to incentivize invested companies to adopt higher standards, improve their practices, and minimize the PAIs on the environment and society.

For more information about what actions have been taken to meet the environmental and/or social characteristics during the reference period, please refer to the section "To what extent were the environmental and/or social characteristics promoted by this financial product met?".

#### How did this financial product perform compared to the reference benchmark?

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

- How does the reference benchmark differ from a broad market index?
  Not applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
  Not applicable.
- How did this financial product perform compared with the broad market index?
  Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.
