Exposure to certain risks in the financial markets provides the opportunity to gain higher returns than those offered by a risk-free investment. In the scale above, Category 1 indicates a low risk of losing the invested capital, but also limited return potential. Conversely, Category 7 indicates a much higher risk of loss, and an equally higher return potential. Please note that the lowest category does not mean risk-free.

The synthetic risk/return indicator is calculated on historical data. However, past performance may not be a reliable indicator of the Sub-fund's future risk profile.

The indicated risk/return category cannot be guaranteed and may vary from time to time.

The Sub-fund falls within category 6. This means that the principal is not guaranteed and investors are exposed to a high degree of risk.

Potential gains or losses should therefore be significant. The Sub-fund may be exposed to higher risks in order to achieve better returns and the NAV may increase or decrease accordingly.

However, the Sub-fund may be exposed to risks other than those considered to determine the risk category using the synthetic indicator. Some of those risks are listed below.

Credit risk: The risk that the security issuer will not be able to repay its debt.

Liquidity risk: The risk that a position cannot be sold at a reasonable price within the desired time.

Counterparty risk: The risk that a counterparty is no longer able to honour its contractual obligations.

Operational risk: The risk associated with Sub-fund management, arising essentially from potential misjudgments or misoperation.

Derivative risk: The impact of derivative instruments on the Sub-fund's risk profile, when such instruments are used to achieve, strengthen or reduce exposure to the underlying assets.

This Sub-fund is not necessarily exposed to all the risks listed above.
