FUND DURATION

This fund was established for a period of 99 years, which may be extended as set forth in the fund Rules.

OBJECTIVES

This fund is actively managed on a discretionary basis. Its investment objective is to achieve a return, net of fees and charges over the recommended investment period that exceeds the performance of its benchmark index, Barclays Euro Government inflation linked bonds 1-10 years. The composition of the fund's portfolio may differ significantly from that of its benchmark index. The index is calculated at closing prices and is expressed in euros and with dividends and coupons reinvested.

In order to achieve its management objective, the fund's strategy is based on investments in debt securities and money market instruments:

- mainly issued by governments, public and private companies in the eurozone, indexed to inflation,
- issued by OECD member states, public and private companies outside the eurozone, indexed to inflation,
- issued by governments, public and private companies that are members of the OECD, at fixed, floating or revisable rates,

The fund adopts an active management style based on expectations in terms of:

- inflation, changes in Central Bank interest rates, the nominal yield curve and the real yield curve,
- credit risk, in order to increase the portfolio's return through a rigorous selection of sovereign, public and private issuers.

The fund will observe the following net asset exposure limits:

From 0% to 100% of net assets may be invested in public and private debt instruments in OECD member countries, of Investment Grade at the time of acquisition, as determined by the asset management company or a credit-rating agency, or not rated, subject to the following limits:

- from 80% to 100 % in issuers in the eurozone
- from 0% to 20% in issuers outside the eurozone
- from 0% to 25% in speculative or unrated securities

The fund's exposure to interest-rate risk will range from 0 to +8.

From 0% to 10% exposure to currency risk on non-euro

The fund may invest in:

- debt securities and money-market instruments including securitisation instruments,
- up to 10 % of its net assets in French or foreign UCITS or general purpose investment funds governed by French law, meeting the conditions of article R.214-13 of the Monetary and Financial Code.

The fund may also trade in:

- forward contracts, futures and options and securities with embedded derivatives, used for hedging and/or to gain exposure to interest-rate credit and currency risks.

These instruments may result in an overall leveraging of the portfolio of up to 10% of net assets.

- deposit cash with credit institutions, borrow cash and engage in securities financing transactions.

Allocation of distributable amounts: Accumulation

Subscription / redemption: Subscription and redemption orders are processed daily at 12 noon and are executed at that day's net asset value. The net asset value is calculated every business day at closing prices, except when the Paris Bourse is closed for trading, as per the Euronext SA calendar.

It reflects the probability that this fund may suffer a loss due to adverse market movements or if we cannot make payments to you.

We have given this fund a risk rating of 2 out of 7, which is relatively low. This means that the level of the fund's potential losses is considered to be low and that if market conditions were to deteriorate it is very unlikely that the fund's net asset value would be adversely affected.

The risk of exposure to speculative credit may adversely affect the fund's net asset value. For more information, you may refer to the fund's risk profile in the prospectus.
