What is this product?

Type: Shares of Commerzbank Stiftungsfonds Rendite, an investment fund.

This is a UCITS investment fund established in Germany. The Commerzbank Stiftungsfonds Rendite investment fund is a collective investment undertaking which collects capital from a number of investors in order to invest it in accordance with a defined investment strategy for the benefit of these investors.

Term: The term of the Fund is open-ended. The Management Company may terminate the Fund by dissolution or merger with another fund, in accordance with the legal provisions.

Objectives: The Fund is an actively managed UCITS which takes an active management approach. The objective of the investment policy is to regularly generate an appropriate return by investing on the domestic and foreign capital markets, taking into account long-term capital preservation. This Fund promotes environmental, social and governance characteristics (ESG characteristics) as defined by Article 8 of Regulation (EU) 2019/2088 on sustainability investments in the financial services sector.

When selecting the fund portfolio, the aim is to achieve an average ESG rating that is higher than the benchmark set. Using a rules-based methodology, the Fund's ESG rating in relation to that of the benchmark is measured and compared with the average "non-financial" ESG performance of a security against that of the security issuer's sector in terms of ESG characteristics. The benchmark consists of:

50% MSCI World AC (All Countries)

16.67% BBG BARC EUR Treasury 1-10 J

33.33% BBG BARC EUR Aggregate Corporates.

In addition, the investment strategy implies that the companies in which they invest apply good corporate governance practices. Good corporate governance is controlled by aligning with the United Nations Global Compact Principles and the Freedom House Index when implementing the investment process. In addition, certain exclusion criteria apply to companies that have a negative impact on certain sustainability factors, such as coal and thermal coal, as well as to armaments, outlawed weapons, tobacco production, pornography and controversial forms of gambling. To achieve its investment objective, the Fund intends to invest, in compliance with the investment principles regulated in the terms and conditions, mainly in interest-bearing securities of domestic and foreign issuers with a good credit standing denominated in Euro and equities included in a market equity index.

For example, a market equity index may be the DAX, MDAX, EUROSTOXX 50, S&P 500, SMI, or any other recognised equity index.

At least 25% of the Fund assets (the amount of the Fund assets is determined by the value of the investment fund's assets without taking into account liabilities) are invested in equity investments as defined by § 2 (8) Investment Tax Act. The actual equity investment ratios of target investment funds can be taken into account. The company may invest in equities, equity-like participation certificates, equity risk securitising securities or equity funds up to a maximum of 50 percent of the value of the Fund.

The portion of the Fund's assets invested in interest-bearing securities will consist mainly of government bonds, bonds issued by other public issuers or covered bonds and corporate bonds.

At least 85 percent of the total value of the Fund invested in interest-bearing securities must be invested in investment grades. For this purpose, interest-bearing securities may only be purchased if the securities themselves, their issuers or guarantors are rated at least BBB- by Standard & Poor's or at least the equivalent of BBB- by another recognised rating agency. If both a security and its issuer or guarantor are rated, or if a security whose issuer or guarantor is rated by several rating agencies, the lower credit rating level is decisive. A maximum of 15 percent of the total value of the Fund invested in interest-bearing securities may be invested in low or non-rated interest-bearing securities.

Target funds, in particular exchange traded funds and actively managed target funds, can be purchased to provide broader market coverage.

RISK INDICATOR

Lower risk

Higher risk

The risk indicator assumes you keep the product for three years.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 3 out of 7, which is medium-low risk class. The risk of potential losses from future performance is therefore classified as medium-low. In unfavourable market conditions, it is unlikely that our ability to pay you will be compromised.

Additional risks: Market liquidity risk could amplify the variation of product performances.

This product does not include any protection from future market performance so you could lose some or all of your investment.

Beside the risks included in the risk indicator, other risks may affect the Product's performance. Further information can be found in the prospectus or the investor information document of Commerzbank Stiftungsfonds Rendite.
