

Key Investor Information

This document provides you with key investor information about this Fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this Fund. You are advised to read it so you can make an informed decision about whether to invest.

Deep Research Fund SICAV Class I (ISIN LI0474797094)

This Fund is managed by LLB Fund Services AG. LLB Fund Services AG is a member of the LLB-Group.

Objectives and Investment Policy

With the long-term oriented and in the implementation disciplined investment process, the fund management aims to create added value for the portfolio. The investment strategy aims to exceed the average return generated on the broad equity market. The fund manager invests in shares of companies whose business models are characterized by long-term sales and profits and which generate a significantly high proportion of free funds. As a conservative investor, he pays attention to the selected companies to a healthy balance sheet situation as well as further corresponding analysis criteria. The stock selection is based on a high value orientation. Due to the long-term investment strategy, short-term fluctuations in stock markets is not a source of return, i.e. tactical market timing activities are not used. The fund/sub-fund becomes active managed. The fund/sub-fund does not follow a benchmark in its investments.

In principle, investors may request the Management Company to redeem units daily at the net asset value per unit less any redemption commission and any taxes. However, the Management Company may suspend redemption, if exceptional circumstances make this appear necessary, considering the interests of investors. The fund takes ecological and social criteria into account in its investments.

Risk and Reward Profile

A **risk level 6** fund has no capital guarantee, has a high potential level of gain or loss, and may experience the amplification of trends due to the impact of financial techniques such as leverage.

Due to the algorithm, not all possible risks can be considered when the Synthetic-Risk-and-Reward Indicator is calculated. You can find more detailed information regarding the risks in the constituent documents. The following risks don't have a direct impact on the indicator, but could still have an influence on the Fund:

- **Liquidity risks:** The Fund may invest a portion of its assets in securities that are not traded on an exchange or similar market. It may be difficult to find a buyer for these securities on short notice. This may increase the risk of a suspension of unit redemptions.

- **Counterparty risks:** The Fund may enter into various transactions with other contracting parties. If a contracting party becomes insolvent, it may no longer be able, or may be only partly able, to settle the Funds open payment claims.

- **Credit risks:** The Fund may invest a substantial portion of its assets in sovereign and corporate bonds. The issuers of these bonds may become insolvent, so that the bonds may lose their value, either in whole or in part.

- **Risks from the use of derivatives:** The Fund is permitted to enter into transactions involving derivatives. The greater opportunities that this affords are accompanied by greater risks. Using derivatives to hedge against losses may reduce the Fund's profit opportunities.

- **Custodial risks:** The custodial safe-keeping of assets, particularly abroad, may be associated with a risk of loss that can result from the Custodian, or sub-custodian, becoming insolvent, breaching its duties of care and diligence, or acting in an unlawful manner.

- **Operational risks:** The Fund may become a victim of fraud or criminal activity. It may suffer losses as a result of misunderstandings or errors on the part of employees of the Management Company or outside third parties or may be damaged due to external events, such as natural catastrophes.

- **Currency risk:** Eurozone investors are exposed to a currency risk. This generally results in a loss if investors hold a security denominated in a foreign currency and the underlying exchange rate drops. This risk likewise exists if the securities are traded on an exchange in Euros. A comprehensive presentation is available in the constituent documents.

Charges for this Fund

The charges you pay are used to pay the costs of running the Fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.
