### Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year, you would get back the amount that you invested (0% annual return)
- that for the other holding periods the product performs as shown in the moderate scenario
- that USD 10,000 is invested

**Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.**

We have classified this product as 4 out of 7, which is a medium risk class. In other words, the potential losses related to the future performance of the product are average.

Investing in this product also entails risks that are materially relevant but not included in the risk indicator:

- **Concentration risk:** As the portfolio is mainly composed of equity securities issued by companies in the Eurozone, it is likely to be more specifically exposed to economic developments in the Eurozone.
- **Sustainability risk:** Environmental and/or social aspects are not systematically part of the sub-fund's investment selection process. As a result, the sub-fund may have greater exposure to companies that have a negative sustainability impact.

This product does not include any protection from future market performance so you could lose some or all of your investment.

<b>Total costs</b>	<b>218 USD</b>	<b>698 USD</b>
