Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 10% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 10% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU0329760770/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Global Real Estate Securities

Investor profile	Growth-oriented
Currency of sub-fund	USD
Sub-fund manager	RREEF America LLC, 222 S. Riverside Plaza, Floor 24, Chicago, IL 60606, United States of America. RREEF America LLC has partially delegated its fund management services to the sub-managers DWS Alternatives Global Limited and DWS Investments Australia Limited.
Performance benchmark	-
Reference portfolio (risk benchmark)	FTSE EPRA/NAREIT Developed Index
Leverage effect	5 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Global Real Estate Securities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Global Real Estate Securities is to generate an above average return for the sub-fund.

The sub-fund is actively managed and is not managed in reference to a benchmark.

The sub-fund invests primarily in the equities of listed companies that own, develop or manage real estate, provided that these equities are considered to be transferable securities as defined by article 41 (1) of the Law of 2010, on Undertakings for Collective Investment.

In particular, the sub-fund may acquire equities, interest-bearing securities, convertible bonds, warrant-linked bonds whose underlying warrants are for securities, equity warrants and participation certificates. In addition, the sub-fund's assets may be invested in index certificates on recognized equity indices.

At least 70% of the fund's total assets are invested in

- a) equities of real estate companies, real estate investment companies including closed real estate investment trusts (REITs) of any legal form, as well as
- b) securities similar to equities, such as participation and dividend-right certificates of companies according to (a) above, and
- c) derivative financial instruments whose underlying instruments directly or indirectly (i.e., via equity indices) constitute investments according to (a).

Where liquid assets cover obligations arising from derivative financial instruments according to (c) above, such liquid assets are attributed to the relevant 70%. Investments according to (a) and (b) herein must not include open-ended real estate investment funds deemed to be collective investment undertakings under Luxembourg law.

In compliance with article 2 of the general section of the Sales Prospectus, the investment policy can also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forward contracts, futures contracts on financial instruments and options on such contracts, as well as privately negotiated swap contracts on any type of financial instrument.

In particular, derivatives based on equities, bonds, currencies or recognized financial indices may also be acquired.

Up to 30% of the sub-fund's assets may be invested in equities and/or securities similar to equities issued by companies worldwide that do not meet the requirements of (a) and (b) above.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an

issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("contro-

versial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of

proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 25% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities

- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via

the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund may invest in all other permissible assets specified in article 2 of the general section of the Sales Prospectus.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Contrary to the provision of the general section of the Sales Prospectus, because of the investment strategy of the sub-fund it is expected that the leverage effect from the use of derivatives will not be any higher than five times the sub-fund assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). The disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Global Real Estate Securities

Legal entity identifier: 549300Z73T43NCO9DO30

ISIN: LU0507268943

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 25% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

X Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

What investment strategy does this financial product follow?

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

This sub-fund pursues a strategy based on equities as main investment strategy. The sub-fund invests primarily in the equities of listed companies that own, develop or manage real estate, provided that these equities are considered to be transferable securities as defined by Article 41 (1) of the Law of 2010, on Undertakings for Collective Investment. In particular, the sub-fund may acquire equities, interest-bearing securities, convertible bonds, warrant-linked bonds whose underlying warrants are for securities, equity warrants and participation certificates. In addition, the sub-fund's assets may be invested in index certificates on recognized equity indices. At least 70% of the fund's total assets are invested in: equities of real estate companies, real estate investment companies including closed ended real estate investment trusts (REITs) of any legal form, securities similar to equities, such as participation and dividend-right certificates, derivative financial instruments like equity indices. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted

environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

• **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 25% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear **energy**, the criteria include comprehensive safety and waste management rules.
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 25% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 25% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU0507268943/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Gold and Precious Metals Equities

Investor profile	Risk-tolerant
Currency of sub-fund	USD

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time. **The sub-fund is therefore only suitable for experienced investors who are familiar with the opportunities and risks of volatile investments and who are in a position to temporarily bear substantial losses.**

For the sub-fund with the name DWS Invest Gold and Precious Metals Equities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

The objective of the investment policy of DWS Invest Gold and Precious Metals Equities is to achieve as high an appreciation as possible of capital invested in U.S. dollars by investing globally in companies in the precious-metals sector deemed to be promising.

The sub-fund is actively managed and is not managed in reference to a benchmark.

In doing so, at least 70% of the sub-fund's assets are invested in equities of foreign and domestic issuers whose revenues or earnings were generated primarily from the exploration for and the extraction and processing of gold, silver, platinum or other precious metals. The targeted companies can be active in exploration, extraction, production, processing and sales.

In compliance with article 2 B. of the general section of the Sales Prospectus, the sub-fund may use suitable derivative financial instruments and techniques in order to implement the investment strategy and to achieve the investment objective, including in particular – but not limited to – forwards, futures, single-stock futures, options or equity swaps. Where liquid assets cover obligations arising from derivative financial instruments, such liquid assets are attributed to the relevant 70%.

Furthermore, the Sub-fund also intends from time to time to establish an exposure of up to 25% of the Sub-fund's assets to the international precious metals markets (including an exposure to gold, silver, palladium and platinum). However this limit can be utilised by establishing an exposure to one single precious metal. For this purpose and within this 25% limit, the Sub-fund may acquire derivative financial instruments whose underlying instruments are precious metals indices and sub-indices in accordance with the 2008 Regulation, as well as ETFs and 1:1 certificates (including Exchange Traded Commodities (ETCs)) the underlying of which are single precious metals and that meet the requirements of transferable securities as determined in article 2 A. (j) of the general section of the Sales Prospectus.

The sub-fund may not enter into any obligations regarding the transfer of physical commodities.

A maximum of 30% of the sub-fund's assets may be invested in instruments that do not satisfy the requirements of the preceding paragraphs as well as in all other permissible assets specified in article 2 of the general section of the Sales Prospectus.

A maximum of 20% of the sub-fund's assets may be invested in securities such as A-Shares,

B-Shares, bonds and other securities listed and traded in Mainland China.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund management considers ESG criteria in its investment decisions ("ESG-Criteria" for the corresponding terms Environmental, Social and Governance). In order to determine whether and to what extent the sub-fund's assets meet the ESG-Criteria, a proprietary ESG database evaluates assets according to ESG-Criteria.

The ESG database processes data from multiple ESG data providers, public sources and considers internal assessments based on a defined assessment and classification methodology. The ESG database is therefore based on the one hand on data and figures and, on the other hand on assessments, that take into account factors beyond the processed data and figures, such as future expected ESG developments, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters and corporate decisions of the issuer. The ESG database uses a variety of assessment categories to assess whether investments meet ESG-Criteria, including amongst others, DWS Norm Assessment, DWS Climate Risk Assessment, DWS ESG Quality Assessment, Exposure in controversial sectors. According to the ESG database analysis, the target investments receive one of six possible scores, with "A" being the highest score and "F" being the lowest score.

The sub-fund management only considers the Climate Risk Assessment, Norm Assessment and involvement in controversial weapons.

DWS Climate Risk Assessment

The DWS Climate Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as investment and are not suitable for the sub-fund.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as investment and are not suitable for the sub-fund.

Involvement in controversial weapons

The ESG database assesses a company's involvement in controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, chemical and biological weapons. Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc.) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

The sub-fund does not promote any Environmental or Social characteristics or any combination of these characteristics. The consideration of ESG criteria in investment decisions in the form of exclusions as described above does not pursue an ESG and/or sustainable investment policy.

The following disclosure is made for the sub-fund in accordance with article 7(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector: The sub-fund management does not consider any principle adverse impacts on sustainability factors for this financial product, as it does not pursue an ESG and/or sustainable investment policy as indicated above.

The following is the disclosure in accordance with article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment: The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least

51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

DWS Invest Latin American Equities

Investor profile	Risk-tolerant
Currency of sub-fund	EUR

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time. **The sub-fund is therefore only suitable for experienced investors who are familiar with the opportunities and risks of volatile investments and who are in a position to temporarily bear substantial losses.**

For the sub-fund with the name DWS Invest Latin American Equities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

The objective of the investment policy for the DWS Invest Latin American Equities is to achieve an above-average return. At least 70% of the sub-fund's assets are invested in equities, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants issued by companies registered in a Latin-American country (or having their principal business activity in a Latin-American country or which, as holding companies, hold primarily interest in companies registered in a Latin-American country such as e.g. Argentina, Brazil, Chile, Colombia, Mexico, Peru or Venezuela.

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges and markets issued by international financial institutions or, to the extent permitted by the Grand Ducal Regulation of February 8, 2008, relating to certain definitions of the Law of 2010 (the 2008 Regulation) and article 41 (1) or (2) of the Law of 2010 through Participatory Notes (P-Notes).

The still-developing exchanges in some of the Latin-American countries present increased opportunities and risks, and are not currently deemed to be regulated markets as defined by article 41 of the Law of 2010; investment in those countries is therefore limited to 10% of the fund's assets and counted towards the investment limit stated in article 2 B. (h) of the general section of the Sales Prospectus.

In compliance with article 2 B. of the general section of the Sales Prospectus, the sub-fund may use suitable derivative financial instruments and techniques in order to implement the investment policy and achieve the investment objective, including in particular – but not limited to – forwards, futures, single-stock-futures, options or equity swaps. Where liquid assets cover obligations arising from derivative financial instruments such liquid assets are attributed to the relevant 70%.

A maximum of 30% of the sub-fund's assets may be invested in equities, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants of issuers that do not fulfil the requirements of the preceding paragraphs.

Up to 30% of the sub-fund's assets may be invested in short-term deposits, money market instruments and deposits with credit institutions and up to 10% in money market funds. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The following disclosure is made for the sub-fund in accordance with article 7(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector: The sub-fund management does not consider any principle adverse impacts on sustainability factors for this financial product, as the investment strategy does not pursue any environmental or social characteristics.

The following is the disclosure in accordance with article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment:

The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j).

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;

- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management makes all management decisions for the sub-fund taking into account the legal and contractual investment restrictions considering the sustainability risks.

The following applies to the consideration of sustainability risks in investment decisions: The sub-fund management also considers sustainability risks in its investment decisions besides the common financial data. This consideration applies to the entire investment process, both for the fundamental analysis of investments and for the investment decisions.

The sub-fund management's responsible investment approach is centred in ESG-integrated fundamental analysis, proxy voting activities and engagement with investee companies. The ESG integration approach is centred in the investment research process, with a focus on fundamental equity research. The sub-fund manager's proprietary method projects ESG issues into the DCF models focusing on the cash flow lines, thus influencing target prices of analysed companies. The objective is to estimate the NPV of material ESG issues to anticipate events that may result in value creation or destruction.

Itaú Asset Management exercises active ownership through voting on investee companies' AGMs and through engagements with investee companies. The objective is to have a positive dialogue with companies regarding the promotion of best ESG practices.

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

DWS Invest Low Carbon Corporate Bonds

Investor profile	Income-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	Solactive ISS Paris Aligned Select Euro Corporate IG Index, administered by Solactive AG
Reference portfolio (risk benchmark)	Solactive ISS Paris Aligned Select Euro Corporate IG Index
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	FD, LD, XD, FC, TFD USD LDH, USD XCH	EUR USD
Front-end load (payable by the investor)	FD, XD, FC, TFD, USD XCH LD, USD LDH	0% up to 3%
Management Company Fee p.a. (payable by the sub-fund)*	FD, FC, TFD LD, USD LDH XD, USD XCH	up to 0.6% up to 0.9% up to 0.2%
Service Fee p.a. (payable by the sub-fund)*	FD, LD, XD, FC, TFD, USD LDH, USD XCH	0%
Taxe d'abonnement p.a. (payable by the sub-fund)	FD, LD, XD, FC, TFD, USD LDH, USD XCH	0.05%
Launch date	FD, LD, XD FC, TFD, USD LDH, USD XCH	June 1, 2021 September 8, 2021

* For additional costs, see article 12 in the general section of the Sales Prospectus.

For the sub-fund with the name DWS Invest Low Carbon Corporate Bonds, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted. Further, the sub-fund has not designated a reference benchmark, i.e. an EU Paris-aligned Benchmark as qualified in accordance with Regulation (EU) 2016/1011, for the purpose of attaining the promoted low carbon emission exposure in view of the Paris Agreement. The sub-fund management will actively manage the portfolio and has defined investment processes for the investment selection to ensure compliance with the methodological requirements for a Paris-aligned Benchmark as set out in Commission Delegated Regulation (EU) 2020/1818. However, the sub-fund has designated the Solactive ISS Paris Aligned Select Euro Corporate IG Index as performance benchmark (Index). The Index is a rules-based index, engineered to measure the performance of liquid, euro denominated, investment grade corporate debt. The Index provides exposure to a IG corporate debt portfolio, which bases upon the ISS ESG climate analysis and is aligned with the 1.5°C scenario through 2050 compared to the underlying investible universe (i.e. the Solactive Euro IG Corporate Index).

Detailed information on the index, the underlying calculation methodology as well as further details can be found at <https://www.solactive.com/indices/>.

The sub-fund promotes the reduction of carbon emissions in view of achieving the long-term global warming objectives of the Paris Agreement adopted under the United Nations Framework Convention on Climate Change (the 'Paris agreement') is an integral part of the sub-fund's concept.

The objective of the investment policy of DWS Invest Low Carbon Corporate Bonds is to generate an above-average return for the sub-fund.

The sub-fund's assets are predominantly invested in interest-bearing debt securities issued by corporates worldwide that are very low CO2 emitters, as well as issuers that are in the process of transition to low emissions.

At least 75% of the sub-fund's assets shall be invested globally in interest-bearing debt securities that have an investment grade status at the time of the acquisition. A maximum of 25% of the sub-fund's assets may be invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition. In case of split rating between three agencies, the lower rating of the two best ratings should be applicable. In case of split rating between two agencies, the lower rating should be applicable. In the case of no rating, an internal rating may be applied. When a holding asset is downgraded to lower than B3/B-, such asset will be sold within 6 months.

At least 70% of the sub-fund's assets will be in EUR or hedged into EUR.

This sub-fund invests at least 80% of its net assets in investments that are aligned with the promoted environmental and social characteristics and the carbon emission reduction strategy. The sub-fund management seeks to attain this by a two-step approach.

ESG assessment methodology

In a first step, the portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives A to F letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate Risk and Transition Assessment

The DWS Climate Risk and Transition Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, i.e., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, i.e., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("contro-

versial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment. Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain its sustainable objective by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the sustainable objective of the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Carbon emissions reduction methodology

In a second step and to contribute to the promoted Paris-aligned reduction of carbon emissions, the sub-fund management applies the following:

Exclusions

The sub-fund management excludes all of the following as an investment:

- (a) Companies involved in any activities related to controversial weapons;
- (b) Companies involved in the cultivation and production of tobacco;
- (c) Companies that are found in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises;
- (d) Companies that derive 1 % or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
- (e) Companies that derive 10 % or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
- (f) Companies that derive 50 % or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
- (g) Companies that derive 50 % or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh.

Further, the sub-fund management excludes any companies that are found or, as relevant, esti-

mated to significantly harm one or more of the environmental objectives referred to in Art. 9 of Regulation (EU) 2020/852.

Reduction of the greenhouse gas (GHG) intensity of the portfolio

The sub-fund management defines a corporate debt portfolio that has a 50% reduced GHG intensity (Scope 1, 2 and 3 GHG emissions divided by EVIC) in comparison to the iBoxx Euro Corporate Index and is at no time allowed to fall short beyond this limit and stay below 300 tons of GHG emissions per million enterprise value including cash (300t CO₂ /EVIC). To reach this objective, the portfolio manager takes the GHG intensity on asset level into account based on data derived from the ESG database.

Decarbonisation trajectory

The portfolio manager reduces the upper limit for the overall portfolio carbon intensity on average year over year by 7%. The reduction starts at the launch date of the first share class of the sub-fund. Starting point is the fixed reference value of 300t CO₂ /EVIC and will end with a value of zero for the carbon intensity. The target reduction of 7% year over year shall be calculated geometrically. The target reduction of on average 7% year over year shall be calculated geometrically.

Information about the decarbonisation trajectory of the sub-fund’s portfolio will be included in the sub-fund’s annual report.

DWS uses MSCI’s CO₂ emission data to calculate the GHG intensity, whereby the dataset represents a company’s Scope 1, Scope 2 and Scope 3 greenhouse gas emissions as reported (if available) or estimated by MSCI’s proprietary estimation models.

DWS may use CO₂ emissions data from other providers. For portfolio constituents where the Scope 1, Scope 2 and Scope 3 emission intensity is not available, the Scope 1, Scope 2 and Scope 3 emission intensity is estimated through a peer group comparison.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 20% of the sub-fund’s assets in sustainable investments in accordance with article 2 (17) SFDR.

Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation

- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- GHG emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Share of non-renewable energy consumption and production (no. 5);
- Emissions to water (no. 8);

- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion and portfolio construction strategy for the sub-funds' assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology and the methodological requirements of Commission Delegated Regulation (EU) 2020/1818. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 25% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 25% limit if circumstances so require and to the extent that this appears to be

justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

The sub-fund's investments in asset-backed securities shall be limited to 20% of the sub-fund's net asset value. The term "asset backed securities" is always used in the extended sense, i.e., including mortgage-backed securities and collateralized debt obligations. Asset-backed securities are interest-bearing debt securities backed by a range of receivables and/or securities, including in particular securitized credit card receivables, private and commercial mortgage receivables, consumer loans, vehicle leasing receivables, small business loans, mortgage bonds, collateralized loan obligations and collateralized bond obligations.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general part of the Sales Prospectus.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notional of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 100%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 200%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales

Prospectus, amongst others, in the section "Efficient portfolio management techniques". The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting as the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk Disclaimer

The sub-fund may invest in different types of asset-backed securities. Among others, investments may also include securities that may become subject to strong market volatility, such as collateralized debt obligations and collateralized loan obligations. In some cases, these securities may be very illiquid during periods of market uncertainty and may be sold only at a discount. Individual securities may, in such extreme market phases, suffer a total loss or a significant decrease in value. High losses of value at the level of the sub-fund can therefore not be excluded.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund. In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. However, the expected leverage should not be viewed as an additional risk limit for the fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Low Carbon Corporate Bonds
Legal entity identifier: 254900P7KL1F8KBDUO70
ISIN: LU2331315981

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: __%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: __%**

It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes the reduction of carbon emissions in view of achieving the long-term global warming objectives of the Paris Agreement.

Further, this sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

The sub-fund has not designated a reference benchmark, i.e. an EU Paris-aligned Benchmark as qualified in accordance with Regulation (EU) 2016/1011, for the purpose of attaining the promoted low carbon emission exposure in view of the Paris Agreement. The sub-fund management will actively manage the portfolio and has defined investment processes for the investment selection to ensure compliance with the methodological requirements for a Paris-aligned Benchmark as set out in Commission Delegated Regulation (EU) 2020/1818 and further described in "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?".

However, the sub-fund has designated the Solactive ISS Paris Aligned Select Euro Corporate IG Index as performance benchmark (Index). The Index is a rules-based index, engineered to measure the performance of liquid, euro denominated, investment grade corporate debt. The Index provides exposure to a IG corporate debt portfolio, which bases upon the ISS ESG climate analysis and is aligned with the 1.5°C scenario through 2050 compared to the underlying investible universe (i.e. the Solactive Euro IG Corporate Index).

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted reduction of carbon emissions and the environmental and social characteristics as well as the sustainable investment is assessed in two steps via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

The ESG assessment methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

In a second step the methodological requirements of Commission Delegated Regulation (EU) 2020/1818 are applied to attain the promoted reduction of carbon emissions as further described in “What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?”. For that purpose, the sub-fund management will use in particular the following sustainability indicators:

- Exclusions as specified in Art. 12 (1) of Commission Delegated Regulations (EU) 2020/1818 for Paris-aligned Benchmarks
- 50% reduction of greenhouse gas (GHG) intensity of the portfolio compared to the investable universe
- Setting of a decarbonisation trajectory – with at least 7% reduction of GHG intensity on average per annum

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section "How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?".

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation. Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- GHG emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Share of non-renewable energy consumption and production (no. 5);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion and portfolio construction strategy for the sub-funds’ assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology and the methodological requirements of Commission Delegated Regulation (EU) 2020/1818 as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund’s annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on bonds as main investment strategy. The sub-fund's assets are predominantly invested in interest-bearing debt securities issued by corporates worldwide that are very low CO2 emitters, as well as issuers that are in the process of transition to low emissions. At least 75 % of the sub-fund's assets shall be invested globally in interest-bearing debt securities that have an investment grade status at the time of the acquisition. A maximum of 25% of the sub-fund's assets may be invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition. At least 70% of the sub-fund's assets will be in EUR or hedged into EUR.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics and the methodological requirement of Commission Delegated Regulation (EU) 2020/1818 as described in the following sections.

The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology and the carbon emission reduction strategy, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

In a first step, the portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region.

Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of “E” or “F”) are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a country's governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Carbon emissions reduction methodology

In a second step and to contribute to the promoted Paris-aligned reduction of carbon emissions, the sub-fund management applies the following:

• **Exclusions**

The sub-fund management excludes all of the following as an investment:

(a) Companies involved in any activities related to controversial weapons;

(b) Companies involved in the cultivation and production of tobacco;

(c) Companies that are found in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises;

(d) Companies that derive 1 % or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;

(e) Companies that derive 10 % or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;

(f) Companies that derive 50 % or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;

(g) Companies that derive 50 % or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh.

Further, the sub-fund management excludes any companies that are found or, as relevant, estimated to significantly harm one or more of the environmental objectives referred to in Art. 9 of Regulation (EU) 2020/852.

• **Reduction of the GHG intensity of the portfolio**

The sub-fund management defines a corporate debt portfolio that has a 50% reduced GHG intensity (Scope 1, 2 and 3 GHG emissions divided by EVIC) in comparison to the iBoxx Euro Corporate Index and is at no time allowed to fall short beyond this limit and stay below 300 tons of GHG emissions per million enterprise value including cash (300t CO₂ /EVIC). To reach this objective, the portfolio manager takes the GHG intensity on asset level into account based on data derived from the ESG database.

• **Decarbonisation trajectory**

The portfolio manager reduces the upper limit for the overall portfolio carbon intensity on average year over year by 7%. The reduction starts at the launch date of the first share class of the sub-fund. Starting point is the fixed reference value of 300t CO₂ /EVIC and will end with a value of zero for the carbon intensity. The target reduction of 7% year over year shall be calculated geometrically. The target reduction of on average 7% year over year shall be calculated geometrically.

Information about the decarbonisation trajectory of the sub-fund's portfolio will be included in the sub-fund's annual report.

DWS uses MSCI's CO₂ emission data to calculate the GHG intensity, whereby the dataset represents a company's Scope 1, Scope 2 and Scope 3 greenhouse gas emissions as reported (if available) or estimated by MSCI's proprietary estimation models.

DWS may use CO₂ emissions data from other providers. For portfolio constituents where the Scope 1, Scope 2 and Scope 3 emission intensity is not available, the Scope 1, Scope 2 and Scope 3 emission intensity is estimated through a peer group comparison.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?"

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practises of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g. issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 80% of its net assets in investments that are aligned with the promoted environmental and social characteristics and the carbon emission reduction strategy (#1 Aligned with E/S characteristics). Within this category, at least 20% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Up to 20% of the net assets of the sub-fund are invested in investments that are not aligned with the objective of reducing carbon emissions (#2 Not sustainable). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 20% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 20% of the net assets of the sub-fund.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund will invest the remaining proportion of the net assets in investments that are not aligned with the promoted environmental and social characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

Remaining investments can be used by the portfolio management in particular for liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU2331315981/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Metaverse

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	50% MSCI World Information Tech Index Net Return in EUR, 35% MSCI World Communication Services Index Net Return in EUR, 15% MSCI All Country World Index in EUR
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

The Board of Directors of the Investment Company may at any time elect to launch new share classes in accordance with the share class features as specified in the general section of the Sales Prospectus. The Sales Prospectus will be updated accordingly.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Metaverse, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Metaverse is to achieve long term capital appreciation. The sub-fund's assets will primarily be invested in equities of companies whose business will benefit from/or is currently related to the evolution of the digital world and here especially to the metaverse.

Such companies are providing computing power, virtual content for the metaverse (digital, virtual

world) and those companies providing devices like hardware and wearables used in the virtual world and new digital payment methods, which enables users to acquire digital assets in the metaverse such as digital real estate and NFTs (non fungible tokens). This can also include disruptive financial intermediaries such as crypto currency exchange trading platforms or digital asset managers and/or custodians, which provide the infrastructure for settlement and payments. No direct investments in crypto currencies will be done.

The Metaverse is a collective virtual open space, created by the convergence of virtually enhanced physical and digital reality, commonly referred to as virtual reality. It is physically persistent and provides enhanced immersive experiences.

Activities that take place in isolated environments (buying digital land and constructing virtual homes, digital twins in e.g., industrial environments, participating in a virtual social experience e.g. online gaming, etc.) will eventually take place in the Metaverse.

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 70% of the sub-fund's assets are invested in equities of all market capitalizations, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants issued by foreign and domestic companies. The securities issued by these companies may be listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operate regularly and are recognized and open to the public.

At least 60% of the sub-fund's assets are invested in equities.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavour-

able market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted

uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may

only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 10% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of

sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the

extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general section of the Sales Prospectus.

Notwithstanding the investment limit specified in article 2 B. (n) concerning the use of derivatives, the following investment restrictions shall apply with regard to the investment restrictions currently applicable in individual distribution countries:

Derivatives that constitute short positions must have adequate coverage at all times and may be used exclusively for hedging purposes. Hedging is limited to 100% of the underlying instrument covering the derivative. Conversely, no more than 35% of the net value of the assets of the sub-fund may be invested in derivatives that constitute long positions and do not have corresponding coverage.

Notwithstanding the investment limit of 10% specified in article 2 B. (i) concerning investments in shares of other UCITS and/or other UCIs as defined in article 2 A. (e), an investment limit of 5% shall apply to this sub-fund.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 60% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic

- Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk Management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Metaverse

Legal entity identifier:

ISIN:

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

X Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. The sub-fund's assets will primarily be invested in equities of companies whose business will benefit from/or is currently related to the evolution of the digital world and here especially to the metaverse. At least 70% of the sub-fund's assets are invested in equities of all market capitalizations, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants issued by foreign and domestic companies. The securities issued by these companies may be listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operate regularly and are recognized and open to the public. At least 60% of the sub-fund's assets are invested in equities. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted

environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 10% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear **energy**, the criteria include comprehensive safety and waste management rules.
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 10% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 10% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

The sub-fund has not been launched yet. The Board of Directors of the Investment Company may at any time elect to launch new share classes for the sub-fund in accordance with the share class features as specified in the general section of the Sales Prospectus.

DWS Invest Multi Opportunities

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	-
Reference portfolio (risk benchmark)	60% MSCI All Country World Index, in EUR and 40% iBoxx Euro Overall Index
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg.
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee
Maximum management fee charged in respect of investments in shares of target funds (payable by the sub-fund)	3.25%

* For additional costs, see article 12 in the general section of the Sales Prospectus.

** The Management Company may, at its discretion, partially or completely dispense with the dilution adjustment.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Multi Opportunities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of the sub-fund DWS Invest Multi Opportunities is to achieve an above-average return.

The sub-fund is actively managed and is not managed in reference to a benchmark.

The sub-fund may invest in equities, in interest-bearing securities, in certificates on, for example, equities, bonds and indices, in investment funds, in derivatives, in convertible and warrant-linked bonds whose warrants relate to securities, in warrants on securities, in participation and dividend-right certificates, in money market instruments and cash. Depending on the evaluation of the market situation, the portfolio manager will

weight such asset classes in the portfolio of the sub-fund and, if necessary, may fully invest the sub-fund's assets in one of these categories.

Notwithstanding article 2 B. (i), the following applies:

The sub-fund's assets may be used to acquire shares of other Undertakings for Collective Investment in Transferable Securities and/or collective investment undertakings as defined in article 2 A. (e), provided that no more than 20% of the sub-fund's assets are invested in one and the same UCITS and/or UCIs.

Every sub-fund of an umbrella fund is to be regarded as an independent issuer, provided that the principle of individual liability per sub-fund is applicable in terms of liability to third parties.

Investments in shares of other collective investment undertakings other than Undertakings for Collective Investment in Transferable Securities must not exceed 30% of the sub-fund's net assets in total.

In the case of investments in shares of another UCITS and/or other UCIs, the investments held by that UCITS and/or by other UCIs are not taken into consideration for the purposes of the limits specified in article 2 B. (a), (b), (c), (d), (e) and (f).

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 49% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 49% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund's investments in asset-backed securities and mortgage-backed securities shall be limited to 20% of the sub-fund's net asset value.

When using financial indices, legal provisions apply as set out in article 44 (1) of the Law of 2010, and article 9 of the Grand-Ducal Regulation of February 8, 2008.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable

derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

The described investment policy may also be implemented by using Synthetic Dynamic Underlyings (SDU).

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted

uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may

only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 10% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of

sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the

extent further described in the general part of the Sales Prospectus.

The sub-fund also intends from time to time to utilize the developments on the international natural resources and commodity markets up to 10% of the sub-fund's assets. For this purpose and within this 10% limit, the sub-fund may acquire derivative financial instruments whose underlying instruments are commodity indices and sub-indices in accordance with the 2008 Regulation, equities, interest-bearing securities, convertible bonds, convertible debentures and warrant-linked bonds, index certificates, participation and dividend-right certificates and equity warrants, as well as 1:1 certificates (including Exchange Traded Commodities (ETCs)) the underlying of which are single commodities/precious metals and that meet the requirements of transferable securities as determined in 2 A. a. of the general section of the Sales Prospectus. The sub-fund does not invest into futures on soft commodities, e.g. cotton, sugar, rice and wheat as well as all manner of livestock.

In addition the sub-fund's assets may be invested in all other permissible assets as specified in article 2 of the general section of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus at least 25% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in such equity capital investments as defined in article 2 (8) of the German Investment Tax Act that may be acquired for the sub-fund in accordance with the Articles of Incorporation and this Sales Prospectus (mixed fund).

Equity capital investments in this respect are

- equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:
 - (i) units of investment funds;
 - (ii) units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
 - (iii) units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;

- (iv) units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- (v) units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.
- units of investment funds, which in accordance with their terms and conditions of investment invest more than 50% of their value or more than 50% of their gross assets (determined as being the value of the investment fund's assets without taking into account liabilities) themselves or as a fund of fund indirectly in units of corporations in the amount of 51% of their value; if the terms and conditions of an equity fund make provisions for a percentage higher than 51% of its value or its gross assets, the share of the equity capital investment is, by way of derogation, deemed to be the amount of the higher percentage;
- units of investment funds, which in accordance with their terms and conditions of investment invest at least 25% of their value or at least 25% of their gross assets (determined as being the value of the investment fund's assets without taking into account liabilities) themselves or as a fund of fund indirectly in units of corporations in the amount of 25% of their value; if the terms and conditions of a balanced fund make provisions for a percentage higher than 25% of its value or its gross assets, the share of the equity capital investment is, by way of derogation, deemed to be the amount of the higher percentage;
- units of investment funds that carry out a valuation at least once per week in the amount of the percentage of their assets published on each valuation date that they actually invest themselves, or as a fund of fund, in units of corporations.
- units of corporations admitted to official trading on a stock exchange or admitted to, or included in, another organized market;
- units of corporations that are not real estate companies and that are domiciled in a member state of the European Union or in another state that is a party to the Agreement on the European Economic Area and are subject there to corporate income tax and are not exempt from it;
- units of corporations that are not real estate companies and that are domiciled in a third country and are subject there to corporate income tax of at least 15% and are not exempt from it; and
- units of other investment funds, which in turn meet the requirements of indents 2 through 4 and of this sentence, in the respective amount specified there.

However, units of corporations are not those that correspond to the categories as defined in indent 1 (i) to (v) above or are held indirectly via partnerships.

Equity capital investments indirectly held by the sub-fund via partnerships are not equity capital investments.

Individual investment fund units may only be taken into consideration once for the purposes of determining the daily equity capital investment rate.

For the purposes of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. This organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notionals of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 30%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 60%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section

"Efficient portfolio management techniques".

The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Units of corporations as defined in indents 2 through 4 are

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Multi Opportunities

Legal entity identifier: 549300YIMZGS19QNMI16

ISIN: LU1054321358

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

What investment strategy does this financial product follow?

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

This sub-fund pursues a strategy based on multiple asset classes as main investment strategy. The sub-fund may invest in equities, in interest-bearing securities, in certificates on equities, bonds and indices, in investment funds, in derivatives, in convertible and warrant-linked bonds whose warrants relate to securities, in warrants on securities, in participation and dividend-right certificates, in money market instruments and cash. Depending on the evaluation of the market situation, the portfolio manager will weight such asset classes in the portfolio of the sub-fund and, if necessary, may fully invest the sub-fund's assets in one of these categories. The sub-fund's investments in asset-backed securities and mortgage backed securities shall be limited to 20% of the sub-fund's net asset value. The sub-fund also intends from time to time to utilize the developments on the international natural resources and commodity markets up to 10% of the sub-fund's assets.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted

environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 10% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear **energy**, the criteria include comprehensive safety and waste management rules.
 Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 10% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 10% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/fund-of-funds/LU1054321358/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Multi Strategy

Investor profile	Income-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	45% BBG Barc Global Aggregate Corporate EUR Index, 35% MSCI World Net TR Index in EUR, 15% BBG Barc Global High Yield Index, 5% JPM EMBI Global Diversified
Leverage effect	5 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

* For additional costs, see article 12 in the general section of the Sales Prospectus.

For the sub-fund with the name DWS Invest Multi Strategy, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustain-

able investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Multi Strategy is to generate an above-average return for the sub-fund.

The sub-fund is actively managed and is not managed in reference to a benchmark.

The sub-fund's assets may be invested globally in the following instruments:

- interest-bearing debt securities issued by sovereign institutions (central banks, government agencies, government authorities and supra-national institutions) from Developed countries or Emerging Markets;
- corporate bonds issued by companies from Developed Countries or Emerging Markets;
- covered bonds;
- convertible bonds and warrant-linked bonds;
- subordinated bonds;
- asset-backed securities;
- investment funds;
- exchange traded commodities (no embedded derivatives), if they are 1:1 certificates qualifying as transferable securities;
- equities;
- participation and dividend-right certificates;
- money market instruments;
- deposits;
- cash.

The sub-fund's investments in the above-mentioned assets may account for up to 100% of the sub-fund's assets each. Though, the sub-fund's investments in equities, in participation and dividend-right certificates shall be limited to 35% and the sub-fund's investments in investment funds shall be limited to 10%.

Up to 10% of the sub-fund's assets may be invested in investment funds.

Derivatives may be used for hedging and investment purposes.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

The described investment policy may also be implemented by using Synthetic Dynamic Underlyings (SDU).

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 49% of the sub-fund's net assets. In exceptionally unfavourable market condi-

tions, it is permitted to temporarily exceed this 49% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the Interna-

tional Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weap-

ons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 1% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of those objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU

Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets.

Asset-backed securities are interest-bearing debt securities backed by a range of receivables and/or securities, including in particular securitized credit card receivables, private and commercial mortgage receivables, consumer loans, vehicle leasing receivables, small business loans, mortgage bonds, collateralized loan obligations and collateralized bond obligations.

The term "asset-backed securities" is always used in the extended sense, i.e., including mortgage-backed securities and collateralized debt obligations. Investments in asset-backed securities may be done in physical asset-backed securities as well as in synthetic asset-backed securities.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notional amounts of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 100%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 200%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section "Efficient portfolio management techniques". The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk disclaimer

The sub-fund may invest in different types of asset-backed securities. Among others, investments may also include securities that may become subject to strong market volatility, such as collateralized debt obligations and collateralized loan obligations. In some cases, these securities may be very illiquid during periods of market uncertainty and may be sold only at a discount. Individual securities may, in such extreme market phases, suffer a total loss or a significant decrease in value. High losses of value at the level of the sub-fund can therefore not be excluded.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Contrary to the provision of the general section of the Sales Prospectus, because of the investment strategy of the sub-fund, it is expected that the leverage effect from the use of derivatives will not be any higher than five times the sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). The disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Multi Strategy

Legal entity identifier: 549300GGGEX2G55MCV04

ISIN: LU0616844766

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 1% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

X Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on multiple asset classes as main investment strategy. The sub-fund may invest globally in interest-bearing securities, in equities, in convertible bonds, in warrant-linked bonds whose underlying warrants relate to securities, in participation and dividend right certificates, in investment funds, in derivatives as well as in money market instruments, deposits and cash. The sub-fund's investments in the above-mentioned assets may account for up to 100% of the sub-fund's assets each. Though, the sub-fund's investments in equities, in participation and dividend-right certificates shall be limited to 35% and the sub-fund's investments in investment funds shall be limited to 10%.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

- **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

- **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

- **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

- **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

- **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or

“F”),

- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance

practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 1% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear **energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 1% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 1% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU0616844766/> as well as on your local country website www.dws.com/fundinformation.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time. **The sub-fund is therefore only suitable for experienced investors who are familiar with the opportunities and risks of volatile investments and who are in a position to temporarily bear substantial losses.**

For the sub-fund with the name DWS Invest Nomura Japan Growth, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

The objective of the investment policy of DWS Invest Nomura Japan Growth is to achieve the highest possible capital appreciation.

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 60% of the sub-fund's assets must be invested in equities of companies having their registered office in Japan.

Up to 20% of the sub-fund's assets may be invested in interest-bearing securities. Convertible bonds and warrant-linked bonds do not constitute interest-bearing securities in this respect.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 40% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 40% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The following disclosure is made for the sub-fund in accordance with article 7(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector: The sub-fund management does not consider any principle adverse impacts on sustainability factors for this financial product, as the investment strategy does not pursue any environmental or social characteristics.

The following is the disclosure in accordance with article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment:

The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general part of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 60% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also

meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management makes all management decisions for the sub-fund taking into account the legal and contractual investment restrictions considering the sustainability risks.

The following applies to the consideration of sustainability risks in investment decisions: The sub-fund management also considers sustainability risks in its investment decisions besides the common financial data. This consideration applies to the entire investment process, both for the fundamental analysis of investments and for the investment decisions.

In its portfolio management, the sub-fund manager considers, in addition to financial information, sustainability risks of portfolio companies.

In the fundamental analysis, sustainability risks may affect the corporate value of portfolio companies from the perspective of long-term valuation. Therefore, ESG analysis is integrated into any investment research. This includes the identification of global sustainability trends, financially relevant ESG issues and materiality.

Moreover, sustainability risks that may arise from issues of climate change or the violation of internationally recognized guidelines are subject to further consideration as the ESG aspects. The internationally recognized guidelines include the ten principles of the United Nations Global Compact, ILO core labour standards, UN guiding principles for business and human rights, and the OECD guidelines for multinational companies.

In order to take sustainability risks into account, the sub-fund manager uses non-financial information into which ESG data from its own research activities, as well as other research companies, are incorporated.

Portfolio management is conducted by an ESG-integrated fundamental analysis, and these investments continue to be monitored from a sustainability risk perspective. In addition, a dialogue or engagement is also sought with portfolio companies for aiming better corporate governance and greater management of ESG criteria.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Qi Global Climate Action, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

DWS Invest Qi Global Climate Action will invest in assets that contribute to the objective of reducing carbon emissions in view of achieving the long-term global warming objectives of the Paris Agreement adopted under the United Nations Framework Convention on Climate Change.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted. Further, the sub-fund has not designated a reference benchmark, i.e. an EU Paris-aligned Benchmark as qualified in accordance with Regulation (EU) 2016/1011, for the purpose of attaining the promoted low carbon emission exposure in view of the Paris Agreement. The sub-fund management will actively manage the portfolio and has defined investment processes for the investment selection to ensure compliance with the methodological requirements for a Paris-aligned Benchmark as set out in Commission Delegated Regulation (EU) 2020/1818.

Therefore, the objective of the investment policy of DWS Invest Qi Global Climate Action is to achieve a sustainable capital appreciation.

The sub-fund is actively managed and is not managed in reference to a benchmark.

"Qi" relates to the stock selection, which is based on a proprietary quantitative investment approach managed by the quantitative investments (Qi) group. Investment decisions are the result of a trade-off between investment opportunities that are identified by analysing fundamental and technical data and risk as well as cost considerations.

At least 80% of the sub-fund's assets are invested in global equities. In the portfolio construction the sub-fund management is focusing on constructing an equity portfolio that is expected to have lower volatility in comparison to the broad equity market.

Up to 20% of the sub-fund's assets may be invested in interest-bearing securities. Convertible bonds and warrant-linked bonds do not constitute interest-bearing securities in this respect.

This sub-fund invests at least 80% of its net assets in investments that are aligned with the promoted environmental and social characteristics and the carbon emission reduction strategy. The sub-fund management seeks to attain this objective by a two-step approach.

ESG assessment methodology

In a first step, the portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, i.e., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, i.e., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts,

and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted

uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics.

However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Carbon emissions reduction methodology
In a second step and to contribute to the promoted Paris-aligned reduction of carbon emissions, the sub-fund management applies the following:

Exclusions

The sub-fund management excludes all of the following as an investment:

- (a) Companies involved in any activities related to controversial weapons;
- (b) Companies involved in the cultivation and production of tobacco;
- (c) Companies that are found in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises;
- (d) Companies that derive 1 % or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
- (e) Companies that derive 10 % or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
- (f) Companies that derive 50 % or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
- (g) Companies that derive 50 % or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh.

Further, the sub-fund management excludes any companies that are found or, as relevant, estimated to significantly harm one or more of the environmental objectives referred to in Art. 9 of Regulation (EU) 2020/852.

Reduction of the greenhouse gas (GHG) intensity of the portfolio

The sub-fund management defines an equity portfolio that has a 50% reduced GHG intensity (Scope 1, 2 and 3 GHG emissions divided by EVIC) in comparison to the MSCI World and is at no time allowed to fall short beyond this limit and stay below 180 tons of GHG emissions per million enterprise value including cash (180t CO₂ /EVIC). To reach this objective, the portfolio manager takes the GHG intensity on asset level into account based on data derived from the ESG database.

The equity portfolio will have an aggregated exposure to high climate impact sectors which is at least equivalent to the aggregated exposure of the underlying investable universe to those sectors (MSCI World Index).

Decarbonisation trajectory

As an additional action to reduce the climate risk even further, the sub-fund management reduces the upper limit for the overall GHG intensity of the

portfolio year over year on average by 7%. The reduction starts on October 31, 2022. Starting point is the fixed reference value of 180t CO₂ /EVIC and will end with a value of zero for the GHG intensity. The target reduction of on average 7% year over year shall be calculated geometrically.

Information about the decarbonisation trajectory of the sub-fund's portfolio will be included in the sub-fund's annual report.

DWS uses MSCI's CO₂ emission data to calculate the GHG intensity, whereby the dataset represents a company's Scope 1, Scope 2 and Scope 3 greenhouse gas emissions as reported (if available) or estimated by MSCI's proprietary estimation models.

DWS may use CO₂ emissions data from other providers. For portfolio constituents where the Scope 1, Scope 2 and Scope 3 emission intensity is not available, the Scope 1, Scope 2 and Scope 3 emission intensity is estimated through a peer group comparison.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 20% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR.

Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment)

and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- GHG emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Share of non-renewable energy consumption and production (no. 5);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion and portfolio construction strategy for the sub-funds' assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology and the methodological requirements of Commission Delegated Regulation (EU) 2020/1818. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure,

culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general section of the Sales Prospectus.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 20% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 20% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (Equity Fund) at least 60% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;

- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of

each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Qi Global Climate Action

Legal entity identifier: 254900DB28E4TYR5ZI32

ISIN: LU2178858259

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: __%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: __%**

It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes the reduction of carbon emissions in view of achieving the long-term global warming objectives of the Paris Agreement.

Further, this sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

The sub-fund has not designated a reference benchmark, i.e. an EU Paris-aligned Benchmark as qualified in accordance with Regulation (EU) 2016/1011, for the purpose of attaining the promoted low carbon emission exposure in view of the Paris Agreement. The sub-fund management will actively manage the portfolio and has defined investment processes for the investment selection to ensure compliance with the methodological requirements for a Paris-aligned Benchmark as set out in Commission Delegated Regulation (EU) 2020/1818 and further described in "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted reduction of carbon emissions and the environmental and social characteristics as well as the sustainable investment is assessed in two steps via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

The ESG assessment methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

In a second step the methodological requirements of Commission Delegated Regulation (EU) 2020/1818 are applied to attain the promoted reduction of carbon emissions as further described in “What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?”. For that purpose, the sub-fund management will use in particular the following sustainability indicators:

- Exclusions as specified in Art. 12 (1) of Commission Delegated Regulations (EU) 2020/1818 for Paris-aligned Benchmarks
- 50% reduction of greenhouse gas (GHG) intensity of the portfolio compared to the investable universe
- Setting of a decarbonisation trajectory – with at least 7% reduction of GHG intensity on average per annum

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section "How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?".

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation. Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- GHG emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Share of non-renewable energy consumption and production (no. 5);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion and portfolio construction strategy for the sub-funds' assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology and the methodological requirements of Commission Delegated Regulation (EU) 2020/1818 as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. The sub-fund's assets are invested in assets that contribute to the objective of reducing carbon emissions in view of achieving the long-term global warming objectives of the Paris Agreement adopted under the United Nations Framework Convention on Climate Change. At least 80% of the sub-fund's assets are invested in global equities. In the portfolio construction the sub-fund management is focusing on constructing an equity portfolio that is expected to have lower volatility in comparison to the broad equity market. "Qi" relates to the stock selection, which is based on a proprietary quantitative investment approach managed by the quantitative investments (Qi) group.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics and the methodological requirements of Commission Delegated Regulation (EU) 2020/1818 as described in the following sections.

The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology and the carbon emission reduction strategy, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

In a first step, the portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or

corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

Carbon emissions reduction methodology

In a second step and to contribute to the promoted Paris-aligned reduction of carbon emissions, the sub-fund management applies the following:

• **Exclusions**

The sub-fund management excludes all of the following as an investment:

(a) Companies involved in any activities related to controversial weapons;

(b) Companies involved in the cultivation and production of tobacco;

(c) Companies that are found in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises;

(d) Companies that derive 1 % or more of their revenues from exploration, mining, extraction,

distribution or refining of hard coal and lignite;

(e) Companies that derive 10 % or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;

(f) Companies that derive 50 % or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;

(g) Companies that derive 50 % or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh.

Further, the sub-fund management excludes any companies that are found or, as relevant, estimated to significantly harm one or more of the environmental objectives referred to in Art. 9 of Regulation (EU) 2020/852.

• **Reduction of the GHG intensity of the portfolio**

The sub-fund management defines an equity portfolio that has a 50% reduced GHG intensity (Scope 1, 2 and 3 GHG emissions divided by EVIC) in comparison to the MSCI World and is at no time allowed to fall short beyond this limit and stay below 180 tons of GHG emissions per million enterprise value including cash (180t CO₂ /EVIC). To reach this objective, the portfolio manager takes the GHG intensity on asset level into account based on data derived from the ESG database.

The equity portfolio will have an aggregated exposure to high climate impact sectors which is at least equivalent to the aggregated exposure of the underlying investable universe to those sectors (MSCI World Index).

• **Decarbonisation trajectory**

As an additional action to reduce the climate risk even further, the sub-fund management reduces the upper limit for the overall GHG intensity of the portfolio year over year on average by 7%. The reduction starts on 31.10.2022. Starting point is the fixed reference value of 180t CO₂ /EVIC and will end with a value of zero for the GHG intensity. The target reduction of on average 7% year over year shall be calculated geometrically.

Information about the decarbonisation trajectory of the sub-fund's portfolio will be included in the sub-fund's annual report.

DWS uses MSCI's CO₂ emission data to calculate the GHG intensity, whereby the dataset represents a company's Scope 1, Scope 2 and Scope 3 greenhouse gas emissions as reported (if available) or estimated by MSCI's proprietary estimation models.

DWS may use CO₂ emissions data from other providers. For portfolio constituents where the Scope 1, Scope 2 and Scope 3 emission intensity is not available, the Scope 1, Scope 2 and Scope 3 emission intensity is estimated through a peer group comparison.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?"

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practises of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g. issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

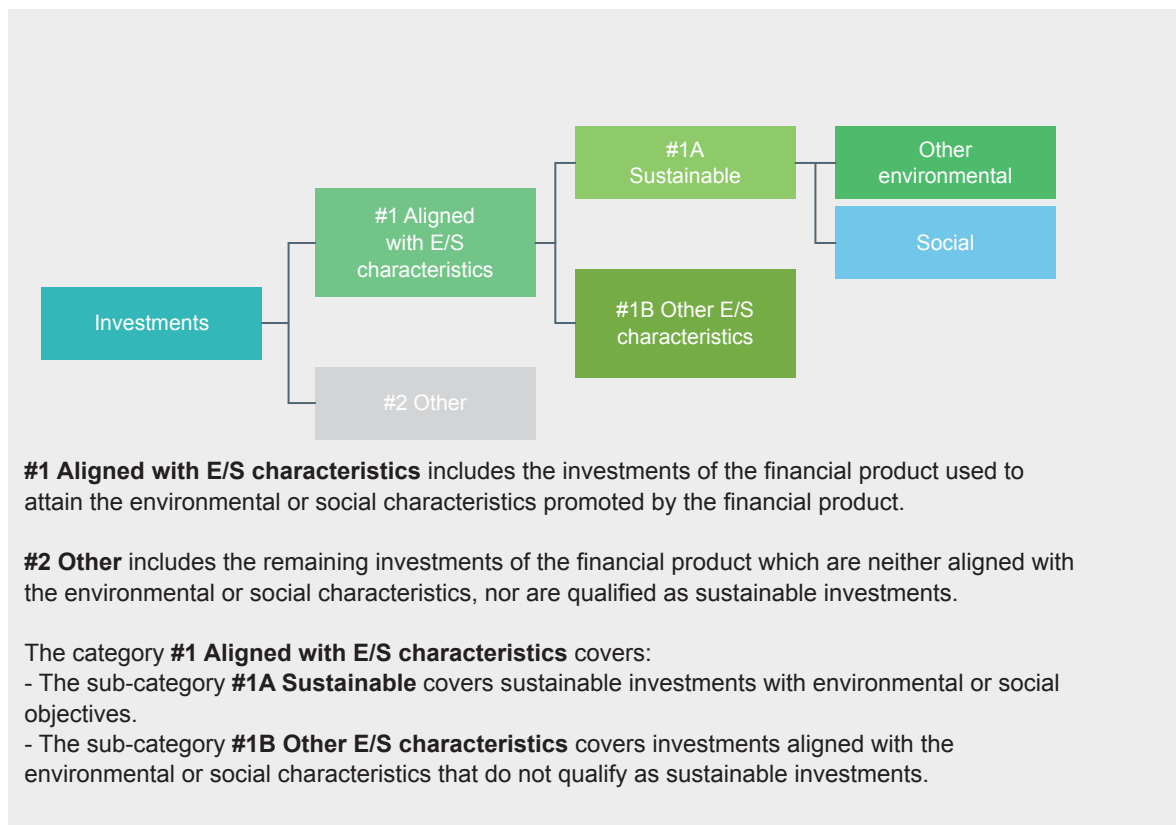

This sub-fund invests at least 80% of its net assets in investments that are aligned with the promoted environmental and social characteristics and the carbon emission reduction strategy (#1 Aligned with E/S characteristics). Within this category, at least 20% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Up to 20% of the net assets of the sub-fund are invested in investments that are not aligned with the objective of reducing carbon emissions (#2 Not sustainable). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 20% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 20% of the net assets of the sub-fund.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund will invest the remaining proportion of the net assets in investments that are not aligned with the promoted environmental and social characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

Remaining investments can be used by the portfolio management in particular for liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU2178858259/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Qi LowVol Emerging Markets

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH and as sub-manager DWS International GmbH, Mainzer Landstr. 11–17, 60329 Frankfurt/Main, Germany
Performance benchmark	MSCI Emerging Markets Daily Net, administered by MSCI Limited.
Reference portfolio (risk benchmark)	MSCI Emerging Markets Daily Net
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg, Frankfurt/Main and Cologne
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

The Board of Directors of the Investment Company may at any time elect to launch new share classes in accordance with the share class features as specified in the general section of the Sales Prospectus. The Sales Prospectus will be updated accordingly.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Qi LowVol Emerging Markets, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Qi LowVol Emerging Markets is to achieve a sustainable capital appreciation.

"Qi" relates to the stock selection, which is based on a proprietary quantitative investment approach managed by the quantitative investments (Qi) group. Investment decisions are the

result of a trade-off between investment opportunities that are identified by analysing fundamental and technical data and risk as well as cost considerations.

In the portfolio construction the sub-fund management is focusing on equities that are expected to have a lower volatility in comparison to the broad equity market.

At least 60% of the sub-fund's assets are invested in equities of companies registered in Emerging Markets countries or companies that conduct their principal business activity in Emerging Markets countries or which, as holding companies, hold primarily interest in companies registered in Emerging Markets countries. The securities issued by these companies may be listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operate regularly and are recognized and open to the public.

A company is viewed as having its principal business activity in emerging-market countries if a significant part of its earnings or revenues is generated there. Emerging markets are countries listed in the MSCI Emerging Markets Index or listed in the Standard & Poor's Emerging Markets Database (EMDB). Further, countries which are listed as low or middle income (including both lower middle and higher middle income) by the World Bank will be considered as Emerging Markets even if such countries are neither listed in the MSCI Emerging Markets Index nor in the EMDB but must not be included in the MSCI World Index. At present, the emerging countries most significant for the sub-fund are mostly, but not exclusively, located in Asia, Eastern Europe and South America and include, among others, Brazil, China, India, Indonesia, Korea, Malaysia, Mexico, Russia, South Africa, Taiwan, Thailand and Turkey. If investments are effected in countries that do not yet possess a regulated market, these securities shall be considered as unlisted financial instruments.

In compliance with article 2 B. of the general section of the Sales Prospectus, the sub-fund may use derivative techniques to achieve the investment objective and implement the investment strategy, including in particular – but not limited to – forwards, futures, single-stock futures, options or equity swaps.

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges and markets issued by international financial institutions. The sub-fund may invest more than 10% of the sub-fund's assets in securities that are traded on the Moscow Exchange (MICEX-RTS).

In accordance with article 41 (1) of the Law of 2010, the sub-fund may be invested in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 40% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 40% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B.o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is

eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),

- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 5% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to

one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies.

An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund’s assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general part of the Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund’s gross assets (determined as being the value of the sub-fund’s assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic

- Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are expected to be components of the benchmark and the portfolio is expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate to a limited extent (e.g., by a positioning outside of the benchmark as well as underweighting or overweighting) and the actual degree of freedom is typically relatively low. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environ-

ment) and actual positioning versus the benchmark.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Qi LowVol Emerging Markets

ISIN:

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

X Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 60% of the sub-fund's assets are invested in equities of companies registered in Emerging Markets countries or companies that conduct their principal business activity in Emerging Markets countries or which, as holding companies, hold primarily interest in companies registered in Emerging Markets countries. "Q" relates to the stock selection, which is based on a proprietary quantitative investment approach managed by the quantitative investments (Qi) group.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and

environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of

“E” or “F”),

- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 5% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear **energy**, the criteria include comprehensive safety and waste management rules.
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 5% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 5% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

The sub-fund has not been launched yet. The Board of Directors of the Investment Company may at any time elect to launch new share classes for the sub-fund in accordance with the share class features as specified in the general section of the Sales Prospectus.

DWS Invest SDG Corporate Bonds

Investor profile	Income-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	-
Reference portfolio (risk benchmark)	- (absolute VaR)
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	FC, LC, TFC, XC	EUR
Front-end load (payable by the investor)	FC, TFC, XC LC	0% up to 3%
Management Company Fee p.a. (payable by the sub-fund)*	FC, TFC LC XC	up to 0.6% up to 0.9% up to 0.2%
Service Fee p.a. (payable by the sub-fund)*	FC, LC, TFC, XC	0%
Taxe d'abonnement p.a. (payable by the sub-fund)	FC, LC, TFC, XC	0.05%
Launch date	FC, LC, TFC, XC	March 31, 2022

* For additional costs, see article 12 in the general section of the Sales Prospectus.

For the sub-fund with the name DWS Invest SDG Corporate Bonds, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund has sustainable investment as its objective and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its

assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest SDG Corporate Bonds is to generate an above-average return for the sub-fund.

The sub-fund is actively managed and is not managed in reference to a benchmark.

The sub-fund's assets are predominantly invested in interest-bearing debt securities issued by corporate issuers worldwide (private and

semi-private) that (i) have a positive contribution to the fulfilment of the United Nations Sustainable Development Goals (SDG) or (ii) that finance special SDG related/themed projects (use of proceeds bonds).

At least 75% of the sub-fund's assets shall be invested globally in interest-bearing debt securities that have an investment grade status at the time of the acquisition. A maximum of 25% of the sub-fund's assets may be invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (rated by

Moody's) or B- (rated by S&P and Fitch) at time of acquisition. In case of split rating between three agencies, the lower rating of the two best ratings should be applicable. In case of split rating between two agencies, the lower rating should be applicable. In the case of no rating, an internal rating may be applied. When a holding asset is downgraded to lower than B3/B-, such asset will be sold within 6 months.

The sub-fund manager aims to hedge any currency risk versus the euro in the portfolio.

The sub-fund management invests at least 90% of the sub-fund's assets in issuers that contribute to environmental and/or social objectives and to at least one of the UN Sustainable development goals ('SDG') or in debt instruments where the use of proceeds is limited to projects with environmental, climate benefits and/or other sustainability or ESG themed projects (i.e. Green Bonds, Blue Bonds, Social Bonds, Sustainability Bonds).

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive

better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a country's governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as rele-

vant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

DWS SDG investment assessment methodology

The UN SDG contribution of an issuer will be measured by dedicated letter scores, which are the result of DWS SDG investment assessment. Issuers are identified and scored essentially

based on their positive and negative contribution to the UN SDGs.

The sub-fund management considers in its allocation the resulting scores from the DWS SDG investment assessment.

DWS Use of Proceed Bond Assessment

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

The sub-fund manager considers in its asset allocation the resulting scores from the investment methodology as detailed above. At least 90% of the sub-fund’s assets are invested in issuers that are classified in the highest three scores (scores A-C) of the SDG score from the application of the SDG investment methodology or in Use of Proceeds Bonds according to the DWS Use of Proceeds Bond assessment methodology.

As part of the sub-fund’s investment in assets that meet the environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 50% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education

- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Activities negatively affecting biodiversity-sensitive areas (no. 7);
- Emissions to water (no. 8);

- Hazardous waste and radioactive waste ratio (no. 9);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 25% of the

sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 25% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

The sub-fund's investments in asset-backed securities shall be limited to 20% of the sub-fund's net asset value. The term "asset backed securities" is always used in the extended sense, i.e., including mortgage-backed securities and collateralized debt obligations. Asset-backed securities are interest-bearing debt securities backed by a range of receivables and/or securities, including in particular securitized credit card receivables, private and commercial mortgage receivables, consumer loans, vehicle leasing receivables, small business loans, mortgage bonds, collateralized loan obligations and collateralized bond obligations.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general part of the Sales Prospectus.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notionals of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 100%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 200%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section "Efficient portfolio management techniques". The selection of counterparties to any total return

swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Risk disclaimer

The sub-fund may invest in different types of asset-backed securities. Amongst others, investments may also include securities that may become subject to strong market volatility, such as collateralized debt obligations and collateralized loan obligations. In some cases, these securities may be very illiquid during periods of market uncertainty and may be sold only at a discount. Individual securities may, in such extreme market phases, suffer a total loss or a significant decrease in value. High losses of value at the level of the sub-fund can therefore not be excluded.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The absolute Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. However, the expected leverage should not be viewed as an additional risk limit for the fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest SDG Corporate Bonds

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics as follows.

I.

On the one hand this [sub-]fund promotes environmental and social characteristics that related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

For such assets this [sub-]fund promotes at the same time a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

II.

On the other hand this [sub-]fund promotes environmental and social characteristics by investing in bonds where the use of proceeds is limited to projects with environmental, climate benefits and/or other sustainability or ESG themed projects (Green Bonds, Blue Bonds, Social Bonds, Sustainability Bonds; further "Use of Proceeds Bonds").

Use of proceeds bonds are devoted to (re)finance projects or activities with positive environmental and/or social impacts. The decisive difference to conventional bonds is that the issuers of use of proceeds bonds invest the issue proceeds in environmentally and/or socially beneficial projects or activities.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **DWS SDG Investment Assessment** is used as indicator to measure the allocation to issuers contributing to the UN SDGs
- **DWS Use of Proceeds Bond Assessment** is used as indicator for qualifying a bond as use-of-proceeds bond that follows recognized industry standards and to check whether the issuer meets defined ESG criteria
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity (or a Use of Proceeds Bond) contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of the issuer significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the issuer as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section "How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?"

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Activities negatively affecting biodiversitysensitive areas (no. 7);
- Emissions to water (no. 8);
- Hazardous waste (no. 9);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund’s annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

The sub-fund pursues a strategy based on bonds as main investment strategy. The sub-fund's assets are predominantly invested in interest-bearing debt securities issued by corporate issuers worldwide that have a positive contribution to the fulfilment of the United Nations Sustainable Development Goals (SDG) or that finance special SDG related/themed projects. At least 75% of the sub-fund's assets shall be invested globally in interest-bearing debt securities that have an investment grade status at the time of the acquisition. A maximum of 25% of the sub-fund's assets may be invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition. The sub-fund manager aims to hedge any currency risk versus the euro in the portfolio.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The selection of assets that attain the promoted environmental or social characteristics is conducted either via execution of a dedicated ESG and SDG assessment (as detailed under I.) or via the qualification as Use of Proceeds Bond (as detailed under II.).

In a last step it is further assessed whether the economic activities of an issuer or the Use of Proceeds Bond can be considered as sustainable (as detailed under III.).

I. ESG & SDG assessment methodology

1. ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of "E" or "F") are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

2. DWS SDG investment assessment methodology

The UN SDG contribution of an issuer will be measured by dedicated letter scores, which are the result of DWS SDG investment assessment. Issuers are identified and scored essentially based on their positive and negative contribution to the UN SDGs.

The sub-fund management considers in its allocation the resulting scores from the DWS SDG investment assessment.

II. DWS Use of Proceeds Bond assessment methodology

The financing of use of proceeds bonds will be assessed via a two stage process.

In a first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles or the ICMA Social Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

The sub-fund manager considers in its asset allocation the resulting scores from the investment methodology as detailed above. At least 90% of the sub-fund’s assets are invested in issuers that are classified in the highest three scores (scores A-C) of the SDG score from the application of the SDG investment methodology or in Use of Proceeds Bonds according to the DWS Use of Proceeds Bond assessment methodology.

III. Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 90% of its net assets in investments that are aligned with the promoted environmental and social characteristics (**#1 Aligned with E/S characteristics**). Within this category, at least 50% of the sub-fund's assets qualify as sustainable investments (**#1A Sustainable**).

Up to 10% of the investments are not aligned with these characteristics (**#2 Other**). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 50% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 50% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU2442814435/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest SDG European Equities

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	-
Reference portfolio (risk benchmark)	MSCI Europe TR Net
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Launch date	FC, LC, TFC, XC	March 31, 2021

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest SDG European Equities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest SDG European Equities is to achieve a positive mid- to long-term investment performance by investing in companies that the sub-fund management considers to be in a position to profit from present or future geopolitical, social and economic trends and themes which have a positive contribution to the fulfilment of the United Nations Sustainable Development Goals (UN SDGs).

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 80% of the sub-fund's assets are invested in equities of foreign and domestic issuers that operate in a business field included in the central themes favoured according to the market situation, profit from the selected trends or are active in an industrial sector that can directly or indirectly contribute to one of the UN SDGs.

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges and markets issued by international financial institutions.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 20% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 20% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the

extent further described in the general part of the Sales Prospectus.

At least 80% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to the promoted environmental and social characteristics (ESG assessment methodology) as well as with DWS SDG investment assessment methodology detailed below.

ESG assessment methodology

The sub-fund management seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and

principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment. As

regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by

means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

DWS SDG investment assessment methodology

The UN SDG contribution of an issuer will be measured by dedicated letter scores, which are the result of DWS SDG investment assessment. Issuers are identified and scored essentially based on their positive and negative contribution to the UN SDGs.

The sub-fund management considers in its allocation the resulting scores from the DWS SDG investment assessment. At least 80% of the sub-fund's net assets are invested in issuers that are classified in the highest three scores (letter scores "A" to "C") of the proprietary letter score from the application of the DWS SDG investment assessment.

Further, issuers with a letter score of "D" in the DWS SDG investment assessment are limited to 15% of the sub-fund's net assets.

Sustainability investment assessment methodology

As part of the sub-fund's investment in assets that meet the DWS SDG investment assessment methodology as well as the ESG assessment methodology in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 50% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action

- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Activities negatively affecting biodiversity-sensitive areas (no. 7);
- Emissions to water (no. 8);
- Hazardous waste and radioactive waste ratio (no. 9);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion

strategy for the sub-fund's assets that are aligned with the promoted environmental and social characteristics via the proprietary ESG assessment methodology and DWS SDG investment assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general section of the Sales Prospectus.

Notwithstanding the investment limit specified in article 2 B. (n) concerning the use of derivatives, the following investment restrictions shall apply with regard to the investment restrictions currently applicable in individual distribution countries:

Derivatives that constitute short positions must have adequate coverage at all times and may be used exclusively for hedging purposes. Hedging is limited to 100% of the underlying instrument covering the derivative. Conversely, no more than 35% of the net value of the assets of the sub-fund may be invested in derivatives that constitute long positions and do not have corresponding coverage.

Notwithstanding the investment limit of 10% specified in article 2 B. (i) concerning investments in shares of other UCITS and/or other UCIs as defined in article 2 A. (e), an investment limit of 5% shall apply to this sub-fund.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment

limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest SDG European Equities

Legal entity identifier: 254900DDS53YGYIDLG57

ISIN: LU2306834925

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **DWS SDG Investment Assessment** is used as indicator to measure the allocation to issuers contributing to the UN SDGs
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section "How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?".

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

X Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Activities negatively affecting biodiversity-sensitive areas (no. 7);
- Emissions to water (no. 8);
- Hazardous waste and radioactive waste ratio (no. 9);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as well as the DWS SDG investment assessment methodology as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund’s annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 80% of the sub-fund's assets are invested in equities of foreign and domestic issuers that operate in a business field included in the central themes favoured according to the market situation, profit from the selected trends or are active in an industrial sector that can directly or indirectly contribute to one of the UN SDGs. Up to 20% of the sub-fund's assets may be invested in short-term deposits, money market instruments and bank balances.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer. The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter

score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of “E” or “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

• **DWS SDG investment assessment methodology**

The UN SDG contribution of an issuer will be measured by dedicated letter scores, which are the result of DWS SDG investment assessment. Issuers are identified and scored essentially based on their positive and negative contribution to the UN SDGs.

The sub-fund management considers in its allocation the resulting scores from the DWS SDG investment assessment. At least 80% of the sub-fund's net assets are invested in issuers that are classified in the highest three scores (letter scores "A" to "C") of the proprietary letter score from the application of the DWS SDG investment assessment.

Further, issuers with a letter score of "D" in the DWS SDG investment assessment are limited to 15% of the sub-fund's net assets.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?"

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 80% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 50% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Up to 20% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear **energy**, the criteria include comprehensive safety and waste management rules.
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 50% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 50% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU2306834925/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest SDG Global Equities

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	-
Reference portfolio (risk benchmark)	MSCI World AC Index
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest SDG Global Equities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector. ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest SDG Global Equities is to achieve a positive mid- to long-term investment performance by investing in companies that the sub-fund management considers to be in a position to profit from present or future geopolitical, social and economic trends and themes which have a positive contribution to the fulfilment of the United Nations Sustainable Development Goals (UN SDGs).

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 80% of the sub-fund's assets are invested in equities of foreign and domestic issuers that operate in a business field included in the central themes favoured according to the market situation, profit from the selected trends or are active in an industrial sector that can directly or indirectly contribute to one of the UN SDGs.

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges and markets issued by international financial institutions.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market

instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 20% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 20% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

At least 80% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to the promoted environmental and social characteristics (ESG assessment methodology) as well as with DWS SDG investment assessment methodology detailed below.

ESG assessment methodology

The sub-fund management seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's

future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced

labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors. If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

DWS SDG investment assessment methodology

The UN SDG contribution of an issuer will be measured by dedicated letter scores, which are the result of DWS SDG investment assessment. Issuers are identified and scored essentially based on their positive and negative contribution to the UN SDGs.

The sub-fund management considers in its allocation the resulting scores from the DWS SDG investment assessment. At least 80% of the sub-fund's net assets are invested in issuers that are classified in the highest three scores (letter scores "A" to "C") of the proprietary letter score from the application of the DWS SDG investment assessment.

Further, issuers with a letter score of "D" in the DWS SDG investment assessment are limited to 15% of the sub-fund's net assets.

Sustainability investment assessment methodology

As part of the sub-fund's investment in assets that meet the DWS SDG investment assessment methodology as well as the ESG assessment methodology in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 50% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy. The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Activities negatively affecting biodiversity-sensitive areas (no. 7);
- Emissions to water (no. 8);
- Hazardous waste and radioactive waste ratio (no. 9);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with the promoted environmental and social

characteristics via the proprietary ESG assessment methodology and DWS SDG investment assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2, including the assets mentioned in article 2 A. (j) of the general section of the Sales Prospectus.

Notwithstanding the investment limit specified in article 2 B. (n) concerning the use of derivatives, the following investment restrictions shall apply with regard to the investment restrictions currently applicable in individual distribution countries:

Derivatives that constitute short positions must have adequate coverage at all times and may be used exclusively for hedging purposes. Hedging is limited to 100% of the underlying instrument covering the derivative. Conversely, no more than 35% of the net value of the assets of the sub-fund may be invested in derivatives that constitute long positions and do not have corresponding coverage.

Notwithstanding the investment limit of 10% specified in article 2 B. (i) concerning investments in shares of other UCITS and/or other UCIs as defined in article 2 A. (e), an investment limit of 5% shall apply to this sub-fund.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits

described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;
- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest SDG Global Equities

Legal entity identifier: 549300PGPY6VQ5ZNEU06

ISIN: LU1891311356

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS ESG Quality Assessment** is used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to their peer group
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **DWS SDG Investment Assessment** is used as indicator to measure the allocation to issuers contributing to the UN SDGs
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section "How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?".

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Activities negatively affecting biodiversitysensitive areas (no. 7);
- Emissions to water (no. 8);
- Hazardous waste and radioactive waste ratio (no. 9);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”.

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

Further information on principal adverse impacts will be provided in an annex to the sub-fund’s annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 80% of the sub-fund's assets are invested in equities of foreign and domestic issuers that operate in a business field included in the central themes favoured according to the market situation, profit from the selected trends or are active in an industrial sector that can directly or indirectly contribute to one of the UN SDGs. Up to 20% of the sub-fund's assets may be invested in short-term deposits, money market instruments and bank balances.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer. The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") are limited to 5% of the sub-fund's net assets.

• DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter

score of “E” or “F”) are excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment are limited to 15% of the sub-fund’s net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of “E” or “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

• **DWS SDG investment assessment methodology**

The UN SDG contribution of an issuer will be measured by dedicated letter scores, which are the result of DWS SDG investment assessment. Issuers are identified and scored essentially based on their positive and negative contribution to the UN SDGs.

The sub-fund management considers in its allocation the resulting scores from the DWS SDG investment assessment. At least 80% of the sub-fund's net assets are invested in issuers that are classified in the highest three scores (letter scores "A" to "C") of the proprietary letter score from the application of the DWS SDG investment assessment.

Further, issuers with a letter score of "D" in the DWS SDG investment assessment are limited to 15% of the sub-fund's net assets.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?"

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?". Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 80% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 50% of the sub-fund's assets qualify as sustainable investments (#1A Sustainable).

Up to 20% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear **energy**, the criteria include comprehensive safety and waste management rules.
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 50% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 50% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU1891311356/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Short Duration Credit

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	iBoxx Euro Corporates 1-3 Y, administered by IHS Markit Benchmark Administration Limited
Reference portfolio (risk benchmark)	(absolute VaR)
Leverage effect	5 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	LC, NC, FC, LD, IC, ID, PFC, IC50, ID50, TFC, TFD	EUR
Front-end load (payable by the investor)	LC, LD NC FC, IC, ID, PFC, IC50, ID50, TFC, TFD	up to 3% up to 1.5% 0%
Management Company Fee p.a. (payable by the sub-fund)*	LC, LD NC FC, TFC, TFD IC, ID, PFC IC50, ID50	up to 0.6% up to 1.1% up to 0.45% up to 0.3% up to 0.2%
Service Fee p.a. (payable by the sub-fund)*	LC, FC, LD, IC, ID, PFC, IC50, ID50, TFC, TFD NC	0% 0.1%
Taxe d'abonnement p.a. (payable by the sub-fund)	LC, NC, FC, LD, PFC, TFC, TFD IC, ID, IC50, ID50	0.05% 0.01%
Launch date	LC, NC, FC LD IC, ID, PFC IC50, ID50 TFC, TFD	February 27, 2006 January 31, 2014 October 14, 2016 April 28, 2017 December 5, 2017
Dilution adjustment (payable by the shareholder)**	PFC: A dilution adjustment of up to 3% based on the gross redemption amount may be charged. Please see the general section for further explanation.	
Placement fee (payable from the sub-fund's assets)	PFC: Up to 3% for the benefit of the distributor. Please see the general section for further explanation.	

* For additional costs, see article 12 in the general section of the Sales Prospectus.

** The Management Company may, at its discretion, partially or completely dispense with the dilution adjustment.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Short Duration Credit, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Short Duration Credit is to achieve an above-average return for the sub-fund.

The sub-fund's assets may be invested globally in the following instruments:

- corporate bonds issued by companies from Developed Countries or Emerging Markets that may or may not offer an investment grade status at the time of acquisition;
- covered bonds;
- convertible bonds;
- subordinated bonds;
- asset-backed securities.

Furthermore, the sub-fund may invest into money market instruments, deposits with credit institutions and up to 10% in money market funds.

The sub-fund's investments in subordinated bonds shall be limited to 30% of the sub-fund's assets value. The sub-fund's investments in asset backed securities shall be limited to 20% of the sub-fund's net asset value.

A maximum of 25% of the sub-fund's assets may be invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition.

The average duration of the overall portfolio shall not exceed three years. The sub-fund manager aims to hedge any currency risk versus the euro in the portfolio.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on

financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

The sub-fund may use, particularly in accordance with the investment limits stated in article 2 B. of the Sales Prospectus – general section, derivatives to optimize the investment objective.

The derivatives may only be used in compliance with the investment policy and the investment objective of DWS Invest Short Duration Credit. The performance of the sub-fund is therefore besides other factors depending on the respective proportion of derivatives, e.g. swaps in the sub-fund's total assets.

To implement the investment policy and achieve the investment objective it is anticipated that the derivatives, such as swaps, will be entered with at least BBB3 (Moody's) /BBB- (S&P, Fitch) rated financial institutions specializing in such transactions. Such OTC-agreements are standardized agreements.

In conjunction with the OTC transactions, it is important to note the associated counterparty risk. The sub-fund's counterparty risk resulting from the use of portfolio total return swaps will be fully collateralized. The use of swaps may furthermore entail specific risks that are explained in the general risk warnings.

The sub-fund can be invested in total or in parts in one or several OTC-transactions negotiated with a counterparty under customary market conditions. Therefore, the sub-fund can be invested in total or in parts in one or several transactions.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG

data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter

score of “E” or “F”) are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 10% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets specified in article 2 of the general section of the Sales Prospectus, including the assets mentioned in article 2 A. (j).

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Specific risks

The use of credit default swaps may entail greater risks than direct investment in debt securities. The market for credit default swaps can at times be less liquid than the markets for debt securities. The use of swaps may entail specific risks that are explained in more detail in the "Notes" section.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notional of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 50%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 100%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section "Efficient portfolio management techniques". The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar

weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The absolute Value-at-Risk (VaR) approach is used to limit market risk for the sub-fund assets.

Contrary to the provision of the general section of the Sales Prospectus, because of the investment strategy of the sub-fund it is expected that the leverage effect from the use of derivatives will not be any higher than five times the sub-fund assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). The disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Short Duration Credit

Legal entity identifier: 549300NH5FB800JT2J63

ISIN: LU0236145453

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

X Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

The sub-fund pursues a strategy based on bonds as main investment strategy. The sub-fund's assets may be invested globally in corporate bonds issued by companies from Developed Countries or Emerging Markets that may or may not offer an investment grade status at the time of acquisition, covered bonds, convertible bonds, subordinated bonds and asset-backed securities. The sub-fund's investments in subordinated bonds shall be limited to 30%. The sub-fund's investments in asset backed securities shall be limited to 20%. The average duration of the overall portfolio shall not exceed three years. The sub-fund manager aims to hedge any currency risk versus the euro in the portfolio.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

- **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

- **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

- **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

- **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

- **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or

“F”),

- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance

practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 10% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear **energy**, the criteria include comprehensive safety and waste management rules.
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 10% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 10% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU0236145453/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Short Duration Income

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	Barclays Global Aggregate 1-3y (hedged EUR), administered by Barclays Bank Plc.
Reference portfolio (risk benchmark)	– (absolute VaR)
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Overview of the share classes

Currency of the share class	FC, FD, IC50, ID50, LC, LD, NC, PFC, TFC, TFD USD FCH, USD LCH, USD TFCH CHF ICH25	EUR USD CHF
Front-end load (payable by the investor)	FC, FD, IC50, ID50, PFC, TFC, TFD, USD FCH, USD TFCH, CHF ICH25 LC, LD, USD LCH NC	0% up to 3% up to 1.5%
Management Company Fee p.a. (payable by the sub-fund)*	FC, FD, TFC, TFD, USD FCH, USD TFCH IC50 ID50 LC, LD, USD LCH NC PFC CHF ICH25	up to 0.45% up to 0.18% up to 0.2% up to 0.6% up to 1.1% up to 0.3% up to 0.23%
Service Fee p.a. (payable by the sub-fund)*	FC, FD, IC50, ID50, LC, LD, NC, PFC, TFC, TFD, USD FCH, NC	0% 0.2%

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to substantial downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Short Duration Income, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Short Duration Income is to generate an above-average return for the sub-fund.

The sub-fund may acquire interest-bearing securities, convertible bonds and warrant-linked bonds, participation and dividend right certificates, money markets instruments and liquid assets.

At least 70% of the sub-fund's assets are invested in interest-bearing securities having maturities classified as short-term. "Short term" relates to a term to maturity or fixed-rate term of investments ranging between zero and three years. Furthermore, the sub-fund may invest into money market instruments, deposits with credit institutions and up to 10% in money market funds.

At least 25% of the sub-fund's assets are invested in assets that have a residual term to maturity that exceeds 24 months.

This sub-fund does not comply with the provisions of the EU Regulation 2017/1131 on money market funds and hence will not qualify as a money market fund.

A maximum of 30% of the sub-fund's total assets may be invested in debt instruments or other securities that do not meet the above criteria.

No more than 25% of the sub-fund's assets may be invested in convertible bonds and warrant-linked bonds; no more than 10% may be invested in participation and dividend right certificates.

The sub-fund's investments in asset backed securities and mortgage-backed securities shall be limited to 20% of the sub-fund's net asset value.

At least 90% of the sub-fund's assets will be in EUR or hedged into EUR.

Investments in domestic securities via the Chinese onshore market will be done in listed securities, via direct access to the inter-bank bond market (CIBM) or via Bond Connect. When investing via Bond Connect the investment limit of 10% must be respected.

Due to the fact that investments made by the sub-fund and income received by the sub-fund may be denominated in Renminbi, investors should be aware of a possible depreciation of the Renminbi.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controver-

sial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter

must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 1% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities

that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The absolute Value-at-Risk (VaR) approach is used to limit market risk for the sub-fund assets.

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notionals of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 50%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 100%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section "Efficient portfolio management techniques". The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Short Duration Income

Legal entity identifier: 254900VZ4U6LV9BKUC86

ISIN: LU2220514363

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 1% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

X Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

What investment strategy does this financial product follow?

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The sub-fund pursues a strategy based on bonds as main investment strategy. The fund may acquire interest-bearing securities, convertible bonds and warrant-linked bonds, participation and dividend right certificates, money markets instruments and liquid assets. At least 70% of the sub-fund's assets are invested in interest-bearing securities having maturities ranging between zero and three years. At least 25% of the sub-fund's assets are invested in assets that have a residual term to maturity that exceeds 24 months. No more than 25% of the sub-fund's assets may be invested in convertible bonds and warrant-linked bonds; no more than 10% may be invested in participation and dividend right certificates. The sub-fund's investments in asset backed securities and mortgage backed securities shall be limited to 20%. At least 90% of the sub-fund's assets will be in EUR or hedged into EUR. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

- **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

- **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

- **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

- **Involvement in controversial weapons**

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

- **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or

“F”),

- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance

practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 1% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

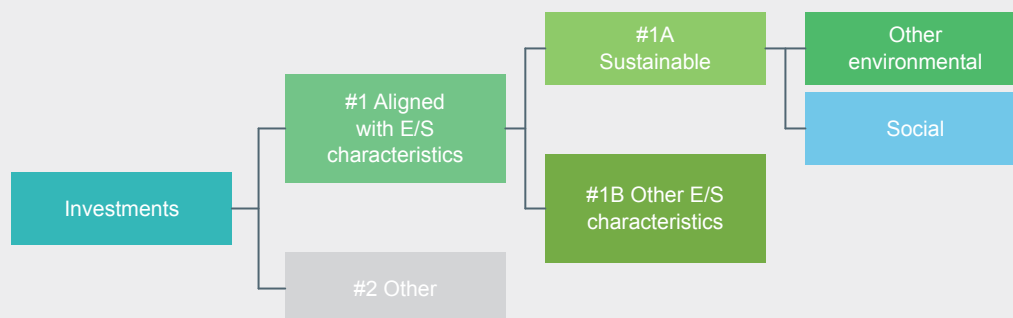

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear **energy**, the criteria include comprehensive safety and waste management rules.
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 1% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 1% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/bond-funds/LU2220514363/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest StepIn ESG Future Trends

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	–
Reference portfolio (risk benchmark)	1Y: 35% MSCI World + 65% Barc Global Agg Corporates TR EUR 2Y: 65% MSCI World + 35% Barc Global Agg Corporates TR EUR 3Y: 95% MSCI World + 5% Barc Global Agg Corporates TR EUR
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg and Frankfurt/Main. A bank business day is any day on which banks are open for business and payments are processed in Luxembourg and Frankfurt/Main.
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

The Board of Directors of the Investment Company may at any time elect to launch new share classes in accordance with the share class features as specified in the general section of the Sales Prospectus. The Sales Prospectus will be updated accordingly.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to markedly **increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest StepIn ESG Future Trends, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of the sub-fund DWS Invest StepIn ESG Future Trends is to generate an above average return for the sub-fund.

The sub-fund is actively managed. The sub-fund is not managed in reference to a benchmark.

In general, the sub-fund will invest globally in fixed income assets such as interest-bearing securities, convertible bonds, money-market instruments, bank balances (the "Fixed Income Assets") as well as equities and/or securities equivalent to equities ("the Equities"). Investment in Fixed Income Assets and Equities shall be mainly held indirectly through investment funds. Derivatives may be used for efficient portfolio management purposes, mainly to hedge foreign currency risks.

At the launch date, the sub-fund's assets shall be predominantly invested in Fixed Income Assets, mainly held through at least six investment funds. The portfolio management intends to decrease the respective proportion of Fixed Income Assets step-by-step over a three-year period and simultaneously increase the respective proportion invested into Equities to at least 90%.

The sub-fund's assets shall be shifted monthly (step-by-step) over a three-year period (the "Shifting Period") into Equities, mainly held through six

investment funds. The portfolio management intends to increase the respective proportion of Equities by 2.5% of the sub-fund's assets with each monthly step (monthly "StepIn").

- After one year, the respective proportion invested into Equities increased to at least 30% of the sub-fund's assets.
- After two years, the respective proportion invested into Equities increased to at least 60% of the sub-fund's assets.
- After three years, the respective proportion invested into Equities increased to at least 90% of the sub-fund's assets. This amount can be further increased to a level of up to 100% of the sub-fund's assets.

In contrast to traditional benchmark-oriented investment funds, the sub-fund management pursues an "Future trends concept" by investing in funds with a focus on companies well positioned to benefit from future trends, such as technological innovation, environmental and social sustainability, impact on SDGs and development of infrastruc-

tures. It is intended to invest in investment funds with different types of thematic focus.

This amount can be further increased to a level of up to 100% of the sub-fund's assets.

The portfolio manager pursues an "Environmental, Social and Corporate Governance (ESG) concept" by investing exclusively in DWS ESG funds.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 10% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 10% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

Contrary to the provision in article 2 B. o) of the general section of the Sales Prospectus the sub-fund may hold up to 10% ancillary liquid assets.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the pro-

moted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment. Issuers with high climate risk profile (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment. Issuers with high severity of norm issues (i.e. a letter score of "E") are limited to 5% of the sub-fund's net assets.

DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allows for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group is composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison receive a worse score. Corporate issuers rated poorly compared to their peer group (i.e. a letter score of "E" or "F") are excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluates a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F") are excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment are limited to 15% of the sub-fund's net assets.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, tobacco, and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, nuclear energy or coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed

by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk-, Norm- and ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 5% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities

- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emissions to water (no. 8);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion

strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

Notwithstanding article 3.2 (i), the sub-fund may invest up to 100% of the sub-fund’s assets into other funds after the launch and the following applies:

The sub-fund’s assets may be used to acquire shares of other UCITS and/or UCIs as defined in article 3.1 (e), provided that no more than 20% of the sub-fund’s assets are invested in one and the same UCITS and/or UCIs.

Every sub-fund of an umbrella fund is to be regarded as an independent issuer, provided that the principle of individual liability per sub-fund is applicable in terms of liability to third parties. Investments in shares of other UCIs other than UCITS must not exceed 30% of the sub-fund’s net assets in total.

In the case of investments in shares of another UCITS and/or other UCIs, the investments held by that UCITS and/or by other UCIs are not taken into consideration for the purposes of the limits specified in article 3.2 (a), (b), (c), (d), (e) and (f).

The sub-fund’s investments in contingent convertibles shall be limited to 10% of the sub-fund’s net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus

The sub-fund will not invest in ABS or MBS.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

The sub-fund will not invest in target funds where the management fee exceeds a certain level. Specific information on the maximum management fee for this sub-fund can be found in the table.

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Stepln ESG Future Trends

Legal entity identifier:

ISIN:

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

X Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on multiple asset classes as main investment strategy. The sub-fund will invest globally in fixed income assets such as interest-bearing securities, convertible bonds, money-market instruments, bank balances as well as equities and/or securities equivalent to equities. Investments shall be mainly held indirectly through investment funds. The "Future trends concept" is implemented by investing in funds with a focus on companies that are well positioned to benefit from future trends, such as technological innovation, environmental and social sustainability, impact on SDGs and development of infrastructures. It is intended to invest in investment funds with different types of thematic focus. Derivatives may be used for efficient portfolio management purposes, mainly to hedge foreign currency risks. At the launch date, the sub-fund's assets shall be predominantly invested in fixed income assets, mainly held through at least six investment funds. The portfolio management intends to decrease the respective proportion of fixed income assets step-by-step over a three-year period and simultaneously increase the respective proportion invested into equities to at least 90%.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered

individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of

that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 5% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

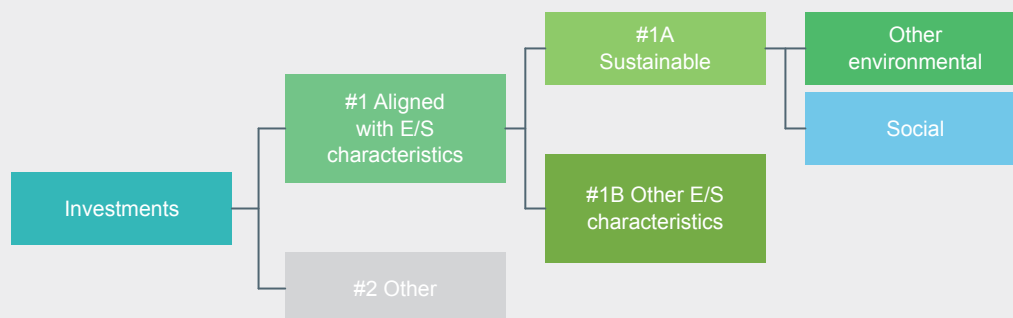

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear **energy**, the criteria include comprehensive safety and waste management rules.
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 5% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 5% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

The sub-fund has not been launched yet. The Board of Directors of the Investment Company may at any time elect to launch new share classes for the sub-fund in accordance with the share class features as specified in the general section of the Sales Prospectus.

DWS Invest StepIn Global Equities

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	MSCI World TR Net, administered by MSCI Limited
Reference portfolio (risk benchmark)	MSCI World TR Net
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg and Frankfurt/Main
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee
Maximum management fee charged in respect of investments in shares of target funds (payable by the sub-fund)	3.25%

Overview of the share classes

Currency of the share class	LC, NC, PFC	EUR
Front-end load (payable by the investor)	LC NC PFC	up to 4% up to 2% 0%
Management Company Fee p.a. (payable by the sub-fund)*	LC NC PFC	up to 1.3% up to 1.7% up to 1.2%
Service Fee p.a. (payable by the sub-fund)*	LC, PFC NC	0% 0.1%
Taxe d'abonnement p.a. (payable by the sub-fund)	LC, NC, PFC	0.05%
Launch date	LC, NC, PFC	January 31, 2017
Dilution adjustment (payable by the shareholder)**	PFC: A dilution adjustment of up to 3% based on the gross redemption amount may be charged. Please see the general section for further explanation.	
Placement fee (payable from the sub-fund's assets)	PFC: Up to 3% for the benefit of the distributor. Please see the general section for further explanation.	

* For additional costs, see article 12 in the general section of the Sales Prospectus.

** The Management Company may, at its discretion, partially or completely dispense with the dilution adjustment.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest StepIn Global Equities, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest StepIn Global Equities is to generate an above average return for the sub-fund.

The sub-fund will invest in interest-bearing securities, convertible bonds, money-market instruments, bank balances, other low-risk assets, investment funds, equities, securities equivalent to equities and derivatives.

From launch until the date, when the shifting period described below is completed, the following shall apply:

At launch date 90% of the sub-fund's assets are invested in interest-bearing securities, convertible bonds, warrant-linked bonds, investment funds, money market instruments or liquid assets.

Starting at launch date the sub-fund's assets will be shifted monthly step-by-step over a three-year period into instruments with higher yield and higher risk, i.e. mainly equities and equity related securities and its derivatives. After three years the percentage amount invested in those securities can be increased to a level of up to 100%.

Notwithstanding article 2 B. (i) the sub-fund may invest up to 100% of the sub-fund's assets into other funds until 3 years after the launch and the following applies:

The sub-fund's assets may be used to acquire shares of other Undertakings for Collective Investment in Transferable Securities and/or collective investment undertakings as defined in article 2 A. (e), provided that no more than 20% of the sub-fund's assets are invested in one and the same UCITS and/or UCIs.

Every sub-fund of an umbrella fund is to be regarded as an independent issuer, provided that the principle of individual liability per sub-fund is applicable in terms of liability to third parties. Investments in shares of other collective investment undertakings other than Undertakings for

Collective Investment in Transferable Securities must not exceed 30% of the sub-fund's net assets in total.

In the case of investments in shares of another UCITS and/or other UCIs, the investments held by that UCITS and/or by other UCIs are not taken into consideration for the purposes of the limits specified in article 2 B. (a), (b), (c), (d), (e) and (f).

After the above-mentioned shifting period, the following shall apply:

At least 51% of the sub-fund's assets must be invested in equities of well-established and growth oriented national and international enterprises which, after return expectations or with taking advantage of short-term market movements, have a promising performance or in equity investment funds. The fund management ensures a flexible focus weighting and invests if necessary – for defensive purposes – additionally in Fixed Income Securities.

Up to 49% of the sub-fund's assets may be invested in money market instruments (including investment funds), and deposits with credit institutions, respectively. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 49% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's

future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribu-

tion of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Princi-

ples. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund’s investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 5% of the sub-fund’s net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities

- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund’s net assets. However, it may occur that part of the investments’ underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund’s assets that are aligned with environmental and social characteristics via

the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in

order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest StepIn Global Equities

Legal entity identifier: 549300CRHOIRRDOB5P81

ISIN: LU1532502512

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

X Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on multiple asset classes as main investment strategy. The sub-fund will invest in interest-bearing securities, convertible bonds, money-market instruments, bank balances, other low-risk assets, investment funds, equities, securities equivalent to equities and derivatives. At launch date 90% of the sub-fund's assets are invested in interest-bearing securities, convertible bonds, warrant-linked bonds, investment funds, money market instruments or liquid assets. Starting at launch date the sub-fund's assets will be shifted monthly step-by-step over a three-year period into instruments with higher yield and higher risk, i.e. mainly equities and equity related securities and its derivatives. After three years the percentage amount invested in those securities can be increased to a level of up to 100%.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

- **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

- **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

- **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

- **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

- **Involvement in controversial weapons**

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

- **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or

“F”),

- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance

practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 5% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear **energy**, the criteria include comprehensive safety and waste management rules.
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 5% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 5% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/balanced-funds/LU1532502512/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Top Asia

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH and as sub-manager DWS Investments Hong Kong Limited, Level 60, International Commerce Centre, 1 Austin Road West, Kowloon, Hong Kong.
Performance benchmark	MSCI AC Asia ex Japan EUR Nt Index (MAASJ Index), administered by MSCI Limited
Reference portfolio (risk benchmark)	MSCI AC Asia ex Japan EUR Nt Index (MAASJ Index)
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg that is also an exchange trading day on the Hong Kong Stock Exchange
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

* For additional costs, see article 12 in the general section of the Sales Prospectus.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Top Asia, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Top Asia is to achieve as high an appreciation as possible of capital invested in Euros. The sub-fund may acquire equities, interest-bearing securities, convertible bonds and warrant-linked bonds, participation and dividend-right certificates and equity warrants. At least 70% of the sub-fund's assets are invested in equities of companies having their registered offices or principal business activity in Asia (ex Japan).

A company is viewed as having its principal business activity in Asia (ex. Japan) if the greatest part of its earnings or revenues is generated there. Considered as Asian (ex Japan) issuers are companies having their registered offices or principal business activity in Hong Kong, India, Indonesia, Korea, Malaysia, the Philippines, Singapore, Taiwan, Thailand and the People's Republic of China. The securities issued by these companies may be listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operate regularly and are recognized and open to the public. The following aspects shall be considered when selecting equities:

- strong market position of an issuer in its field of business;
- financial ratios that are sound for the circumstances;
- better-than-average corporate management that is focused on achieving solid long-term earnings;
- strategic orientation of the company;
- shareholder-centred information policies.

Accordingly, the sub-fund acquires equities of companies it expects to achieve results and/or share prices that are above average with respect to the broad market.

A maximum of 30% of the sub-fund's assets (after deduction of liquid assets) may be invested in equities of foreign and domestic issuers that do not satisfy the requirements of the preceding sentence.

A maximum of 20% of the sub-fund's assets may be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteris-

tics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 3% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to

determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets.

Notwithstanding the investment limit of 10% specified in article 2 B. (i) concerning investments in shares of other Undertakings for Collective Investment in Securities and/or other collective investment undertakings as defined in article 2 A. (e), an investment limit of 5% shall apply to this sub-fund.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

The following investment restriction applies to the sub-fund due to a possible registration in Korea:

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union

or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it;

- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The sub-fund must invest more than 70% of the net assets in non-Korean Won-denominated assets.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may

lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Specific risks

Because the sub-fund is specialized on a specific geographic area, it presents increased opportunities, but these opportunities are countered by equally elevated risks.

The sub-fund is focused on investments in Asia. Asian exchanges and markets are sometimes subject to substantial fluctuations. Fluctuations in the rate of exchange of the local currencies against the euro can also impact on investment performance. The credit risk associated with an investment in securities, i.e., the risk of a decline in the assets of issuers, cannot be entirely eliminated even by the most careful selection of the instruments to be purchased. Political changes, restrictions on currency exchange, exchange monitoring, taxes, limitations on foreign capital investments and capital repatriation etc. can also affect investment performance.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Top Asia
Legal entity identifier: 549300PS13LX4PXITZ33
ISIN: LU0145648290

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 3% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

X Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets are invested in equities of companies having their registered offices or principal business activity in Asia (ex Japan). Up to 20% of the sub-fund's assets may be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed

to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) are excluded as an investment.

• **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS’ Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or

- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 3% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear **energy**, the criteria include comprehensive safety and waste management rules.
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 3% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 3% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU0145648290/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest Top Dividend

Investor profile	Growth-oriented
Currency of sub-fund	EUR
Sub-fund manager	DWS Investment GmbH
Performance benchmark	-
Reference portfolio (risk benchmark)	MSCI WORLD HIGH DIVIDEND YIELD
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg.
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

Dilution adjustment (payable by the shareholder)**	PFC and PFD: A dilution adjustment of up to 3% based on the gross redemption amount may be charged. Please see the general section for further explanation.	
Placement fee (payable from the sub-fund's assets)	PFC and PFD: Up to 3% for the benefit of the distributor. Please see the general section for further explanation.	

* For additional costs, see article 12 in the general section of the Sales Prospectus.

** The Management Company may, at its discretion, partially or completely dispense with the dilution adjustment.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to **markedly increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest Top Dividend, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest Top Dividend is to achieve an above average return.

The sub-fund is actively managed and is not managed in reference to a benchmark.

At least 70% of the sub-fund's assets are invested in equities of international issuers that are expected to deliver an above-average dividend yield.

When selecting equities, the following criteria shall be of decisive importance: dividend yield above the market average; sustainability of dividend yield and growth; historical and future earnings growth; price/earnings ratio. In addition to these criteria, the proven stock-picking process of the Fund Manager will be applied. This means that a company's fundamental data, such as asset quality, management skills, profitability, competitive position and valuation, are analysed. These criteria may be weighted differently and do not always have to be present at the same time.

In compliance with article 2 B. of the general section of the Sales Prospectus, the sub-fund may use derivative techniques to implement the investment objective, including in particular – but not limited to – forwards, futures, single-stock-futures, options or equity swaps.

Against this background, positions could be built up that anticipate declining stock prices and index levels.

According to the prohibition stipulated in article 2 F. of the general section of the Sales Prospectus, no short sales of securities will be undertaken. Short positions are achieved by using securitized and non-securitized derivative instruments.

Investments in the securities mentioned above may also be made through Global Depository Receipts (GDRs) and American Depository Receipts (ADRs) listed on recognized exchanges and markets issued by international financial institutions.

Up to 30% of the sub-fund's assets may be invested in instruments that do not meet the above-mentioned criteria.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These investments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

A maximum of 20% of the sub-fund's assets may be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China.

The sub-fund will not invest in contingent convertibles.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets as specified in article 2 A. (j) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further

detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial

business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This

assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 15% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

For the purpose of inducing a partial tax exemption within the meaning of the German Investment Tax Act and in addition to the investment limits described in the Articles of Incorporation and this Sales Prospectus (equity fund) at least 51% of the sub-fund's gross assets (determined as being the value of the sub-fund's assets without taking into account liabilities) are invested in equities admitted to official trading on a stock exchange or admitted to, or included in, another organized market and which are not:

- units of investment funds;
- equities indirectly held via partnerships;
- units of corporations, associations of persons or estates at least 75% of the gross assets of which consist of immovable property in accordance with statutory provisions or their investment conditions, if such corporations, associations of persons or estates are subject to corporate income tax of at least 15% and are not exempt from it or if their distributions are subject to tax of at least 15% and the sub-fund is not exempt from said taxation;
- units of corporations which are exempt from corporate income taxation to the extent they conduct distributions unless such distributions are subject to taxation at a minimum rate of 15% and the sub-fund is not exempt from said taxation;
- units of corporations the income of which originates, directly or indirectly, to an extent of more than 10%, from units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate

income tax of at least 15% or are exempt from it;

- units of corporations which hold, directly or indirectly, units of corporations, that are (i) real estate companies or (ii) are not real estate companies, but (a) are domiciled in a member state of the European Union or a member state of the European Economic Area and are not subject in said domicile to corporate income tax or are exempt from it or (b) are domiciled in a third country and are not subject in said domicile to corporate income tax of at least 15% or are exempt from it if the fair market value of units of such corporations equal more than 10% of the fair market value of those corporations.

For the purpose of this investment policy and in accordance with the definition in the German Investment Code (KAGB), an organized market is a market which is recognized, open to the public and which functions correctly, unless expressly specified otherwise. Such organized market also meets the criteria of article 50 of the UCITS Directive.

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Top Dividend

Legal entity identifier: 5493003XYDKBDCH55556

ISIN: LU0507265923

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

X Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets are invested in equities of international issuers that are expected to deliver an above-average dividend yield. When selecting equities, the following criteria shall be of decisive importance: dividend yield above the market average, sustainability of dividend yield and growth, historical and future earnings growth as well as price/earnings ratio.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers

that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),

- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 15% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

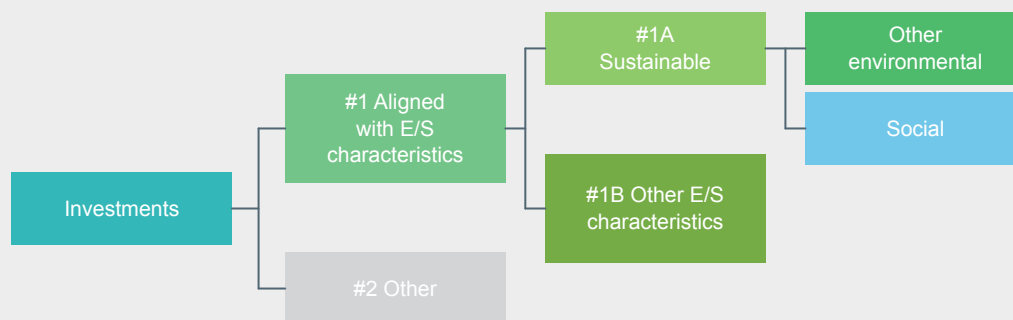

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear **energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 15% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 15% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://funds.dws.com/en-lu/equity-funds/LU0507265923/> as well as on your local country website www.dws.com/fundinformation.

DWS Invest USD High Yield Corporates

Investor profile	Growth-oriented
Currency of sub-fund	USD
Sub-fund manager	DWS Investment GmbH and as sub-manager DWS Investment Management Americas Inc., 345 Park Avenue, New York, NY 10154, United States of America
Performance benchmark	ICE BoAML US HY Constrained, administrated by ICE Data Indices, LLC.
Reference portfolio (risk benchmark)	ICE BoAML US HY Constrained
Leverage effect	2 times the value of the investment sub-fund's assets
Calculation of the NAV per share	Each bank business day in Luxembourg
Swing Pricing	The sub-fund may apply Swing Pricing. If implemented, it will be disclosed in the fund facts section on the website of the Management Company www.dws.com .
Order acceptance	All subscription, redemption and exchange orders are placed on the basis of an unknown net asset value per share. Orders received by the Transfer Agent at or before 4:00 PM Luxembourg time on a valuation date are processed on the basis of the net asset value per share on the subsequent valuation date. Orders received after 4:00 PM Luxembourg time are processed on the basis of the net asset value per share on the valuation date immediately following that next valuation date.
Value date	In a purchase, the equivalent value is debited three bank business days after issue of the shares. The equivalent value is credited three bank business days after redemption of the shares. The value date for purchase and redemption orders of certain currencies may deviate by one day from the value date as specified in the description of share classes in the general section of the Sales Prospectus.
Fractional shares	Up to three places after the decimal point
Expense cap	Not to exceed 15% of the Management Company fee

The Board of Directors of the Investment Company may at any time elect to launch new share classes in accordance with the share class features as specified in the general section of the Sales Prospectus. The Sales Prospectus will be updated accordingly.

Due to its composition and the techniques applied by its fund management, the sub-fund is subject to markedly **increased volatility**, which means that the price per share may be subject to **substantial** downward or upward **fluctuation**, even within short periods of time.

For the sub-fund with the name DWS Invest USD High Yield Corporates, the following provisions shall apply in addition to the terms contained in the general section of the Sales Prospectus.

Investment policy

This sub-fund promotes environmental and social characteristics and reports as product in accordance with article 8(1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). While the sub-fund does not have as its objective a sustainable investment, it will invest a minimum proportion of its assets in sustainable investments as defined by article 2 (17) SFDR.

The objective of the investment policy of DWS Invest USD High Yield Corporates is to generate an above-average return for the sub-fund.

At least 70% of the sub-fund's assets are invested globally in corporate bonds that offer a non-investment grade status. Non-investment grade

encompasses BB+ and below rated bonds, including bonds with D rating and non-rated bonds.

In case of a split rating involving three rating agencies, the second best will prevail. If a security is rated by only two agencies, the lower of the two ratings will be used for the rating classification. If a security only has one rating, the single rating will be used. If there is no official rating, an internal rating will be applied in accordance with DWS internal guidelines.

Up to 30% of the sub-fund's assets may be invested in corporate bonds that do not meet the above-mentioned criteria.

The sub-fund manager aims to hedge any currency risk versus the USD in the portfolio.

In the due course of a re-structuring of fixed income instruments held by the sub-fund, the sub-fund manager may also invest up to a maximum of 10% of the sub-fund's assets into listed or non-listed equities. Furthermore, the sub-fund

manager may also participate in capital increases or other corporate actions (e.g. for convertible bonds or warrant linked bonds) that are part of a re-structuring or take place after a re-structuring.

In compliance with the investment limits specified in article 2 B. of the general section of the Sales Prospectus, the investment policy may also be implemented through the use of suitable derivative financial instruments. These derivative financial instruments may include, among others, options, forwards, futures, futures contracts on financial instruments and options on such contracts, as well as privately negotiated OTC contracts on any type of financial instrument, including swaps, forward-starting swaps, inflation swaps, total return swaps, excess return swaps, swaptions, constant maturity swaps and credit default swaps.

In accordance with article 41 (1) of the Law of 2010, the sub-fund may invest in money market instruments, deposits with credit institutions and up to 10% in money market funds. These invest-

ments in money market instruments, deposits with credit institutions, money market funds and the holding of ancillary liquid assets (as referred to below) will not in aggregate exceed 30% of the sub-fund's net assets. In exceptionally unfavourable market conditions, it is permitted to temporarily exceed this 30% limit if circumstances so require and to the extent that this appears to be justified with regard to the interests of shareholders.

The sub-fund may hold ancillary liquid assets as specified in article 2 B. o) of the general section of the Sales Prospectus.

At least 51% of the sub-fund's net assets are invested in assets that comply with DWS standards in respect to environmental and social characteristics as well as good governance practices as detailed below.

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") are excluded as an investment.

DWS Norm Assessment

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") are excluded as an investment.

DWS Sovereign Assessment

The DWS Sovereigns Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") are excluded as an investment.

Exposure to controversial sectors

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors are defined, for example, as the civil firearms industry, military defence, and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") are excluded as an investment.

Involvement in controversial weapons

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted

uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

DWS Use of Proceed Bond Assessment

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F").

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may

only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Ancillary liquid assets will not be evaluated via the ESG assessment methodology.

As part of the sub-fund's investment in assets that meet the DWS standards in respect to environmental and social characteristics as well as good governance practices as further described above, the sub-fund management will invest at least 5% of the sub-fund's net assets in sustainable investments in accordance with article 2 (17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption & production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources, and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment.

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of

sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the SFDR:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology. For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment.

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Further, the management company considers active ownership as a strong driver to improve governance, policies, and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture, and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

Further information about the environmental and social characteristics promoted by this sub-fund is available in the annex to this Sales Prospectus.

The sub-fund's investments in contingent convertibles shall be limited to 10% of the sub-fund's net asset value.

The sub-fund intends to use securities financing transactions under the conditions and to the extent further described in the general part of the Sales Prospectus.

In addition, the sub-fund's assets may be invested in all other permissible assets.

In extreme market situations, the Portfolio Manager may diverge from the above investment strategy to avoid a liquidity squeeze. Up to 100% of the sub-fund's assets may temporarily be invested in interest-bearing debt securities and money market instruments permissible under Directive 2009/65/EC of the European Parliament and of the Council of July 13, 2009, on the coordination of laws, regulations and administrative provisions relating to undertakings for collective investment in transferable securities (UCITS).

The respective risks connected with investments in this sub-fund are disclosed in the general section of the Sales Prospectus.

Integration of sustainability risks

The sub-fund management integrates sustainability risks into its investment decisions as described in the General Section of the Sales Prospectus in the section "Integration of sustainability risks in the investment process".

Benchmark

The sub-fund is actively managed and is managed in reference to one or a combination of benchmarks as further detailed in the sub-fund specific table. All benchmarks respectively their administrators are registered with the ESMA, either in the public register of administrators of benchmark indices or the public register of third country benchmarks.

The majority of the sub-fund's securities or their issuers are not necessarily expected to be components of the benchmark and the portfolio is not necessarily expected to have a similar weighting to the benchmark. The sub-fund management will use its discretion to invest in securities and sectors that are not included in the benchmark in order to take advantage of specific investment opportunities. In regard to its benchmark, the sub-fund positioning can deviate significantly (e.g., by a positioning outside of the benchmark as well as a significant underweighting or overweighting) and the actual degree of freedom is typically relatively high. A deviation generally reflects the sub-fund manager's evaluation of the specific market situation, which may lead to a defensive and closer or a more active and wider positioning compared to the benchmark. Despite the fact that the sub-fund aims to outperform the return of the benchmark, the potential outperformance might be limited depending on the prevailing market environment (e.g. less volatile market environment) and actual positioning versus the benchmark.

Additional information

When using total return swaps to implement the investment strategy as described above, the following shall be noted:

The proportion of the sub-fund's net assets subject to total return swaps, expressed as the sum of notionals of the total return swaps divided by the sub-fund's net asset value, is expected to reach up to 50%, but depending on the respective market conditions, with the objective of efficient portfolio management and in the interest of the investors, it may reach up to 100%. The calculation is performed in line with the guidelines CESR/10-788. However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Additional information on total return swaps may be found in the general section of the Sales Prospectus, amongst others, in the section "Efficient portfolio management techniques". The selection of counterparties to any total return swap is subject to the principles as described in the section "Choice of counterparty" of the Sales Prospectus. Further information on the counterparties is disclosed in the annual report. For special risk considerations linked to total return swaps, investors should refer to the section "General Risk Warnings", and in particular the section "Risks connected to derivative transactions" of the Sales Prospectus.

Risk management

The relative Value-at-Risk (VaR) approach is used to limit market risk in the sub-fund.

In addition to the provisions of the general section of the Sales Prospectus, the potential market risk of the sub-fund is measured using a reference portfolio that does not contain derivatives ("risk benchmark").

Leverage is not expected to exceed twice the value of the investment sub-fund's assets. The leverage effect is calculated using the sum of notional approach (absolute (notional) amount of each derivative position divided by the net present value of the portfolio). However, the disclosed expected level of leverage is not intended to be an additional exposure limit for the sub-fund.

Investment in shares of target funds

In addition to the information in the general section of the Sales Prospectus the following is applicable to this sub-fund:

When investing in target funds associated to the sub-fund, the part of the management fee attributable to shares of these target funds is reduced by the management fee/all-in fee of the acquired target funds, and as the case may be, up to the full amount (difference method).

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest USD High Yield Corporates

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: __%	<input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

This sub-fund promotes environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment is assessed via the application of a proprietary ESG assessment methodology as further described in section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. The methodology applies a variety of assessment categories that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which are as follows:

- **DWS Climate and Transition Risk Assessment** is used as indicator for an issuer’s exposure to climate and transition risks
- **DWS Norm Assessment** is used as indicator for an issuer’s exposure to norm-related issues
- **DWS Sovereign Assessment** is used as indicator for a sovereign issuer’s extent of controversies regarding governance, such as political and civil liberties
- **Exposure to controversial sectors** is used as indicator for an issuer’s involvement in controversial sectors and controversial activities
- **Involvement in controversial weapons** is used as indicator for an issuer’s involvement in controversial weapons
- **Sustainability Investment Assessment** is used as indicator to measure the proportion of sustainable investments

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS will measure the contribution to the UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluates (1) whether an economic activity contributes to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harm any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such is in line with the DWS safeguard assessment.

The sustainability investment assessment uses data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity is sustainable. Activities that contribute positively to the UN SDGs are measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution is determined, the activity will be considered sustainable if the company passes the DNSH assessment and complies with the DWS safeguard assessment as detailed in the section “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.

The sub-fund will currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment is integral part of the sustainability investment assessment and evaluates whether an economic activity with a contribution to an UN SDG causes significant harm to any of these objectives. In case that a significant harm is identified, the economic activity fails the DNSH assessment and cannot be considered as sustainable economic activity.

How have the indicators for adverse impacts on sustainability factors been taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrates all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS has established quantitative thresholds and/or qualitative values to determine if an investment significantly harms any of the environmental or social objectives. These values are set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluates through its safeguard assessment the alignment of a company with international norms. This includes checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms are considered as non-compliant to the safeguards and their economic activities cannot be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

X Yes, the sub-fund management considers the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts are considered at product level through the exclusion strategy for the sub-fund's assets that are aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".

For sustainable investments, the principal adverse impacts are further considered in the DNSH assessment as described above in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

Further information on principal adverse impacts will be provided in an annex to the sub-fund's annual report.

No

The Investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This sub-fund pursues a strategy based on bonds as main investment strategy. At least 70% of the sub-fund's assets are invested globally in corporate bonds that offer a non-investment grade status at the time of acquisition. Up to 10% of the sub-fund's assets may be invested into listed or non-listed equities in the due course of a re-structuring of fixed income instruments. The sub-fund's investments in contingent convertibles shall be limited to 10%. Currency risks versus the USD in the portfolio shall be hedged.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics is integral part of the ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

ESG assessment methodology

The portfolio management of this sub-fund seeks to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology is based on the ESG database, which uses data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database is therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derives "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers receive one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category is deemed insufficient, the portfolio management is prohibited from investing in that issuer, even if it is eligible according to other categories. For exclusion purposes, each letter score in a category is considered individually and may result in exclusion of an issuer.

The ESG database uses a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluates issuers in relation to climate change and

environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to such risks receive better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of “F”) are excluded as an investment.

• **DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluates the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of “E” or “F”) are excluded as an investment.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities are defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors are defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors are defined as relevant. Other relevant sectors are, for example, coal mining and coal-based power generation.

Issuers are evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) are excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) are excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) are excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assesses a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers are assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") are excluded as an investment.

• **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment are investable also in cases where the bond issuer does not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds will be assessed via a two-stage process.

In the first stage DWS assesses whether a bond qualifies as a Use of Proceeds Bond. A key element is checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focuses on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complies with these principles, the second stage assesses the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment is based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of

“E” or “F”),

- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).”

To the extent that the sub-fund seeks to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS will measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluates potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

The procedure to assess the good governance practices of the investee companies is based on the DWS Norm Assessment, as further detailed in the dedicated section “What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?”. Accordingly, the assessed investee companies follow good governance practices.

Further, the management company considers active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership means using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity can be initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity can be undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

What is the asset allocation planned for this financial product?

This sub-fund invests at least 51% of its net assets in investments that are aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 5% of the sub-fund’s assets qualify as sustainable investments (#1A Sustainable).

Up to 49% of the investments are not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are currently not used to attain the environmental or social characteristics promoted by the sub-fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear **energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy is 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities are aligned with the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned □ Other Investments

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned □ Other Investments

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The sub-fund does not have a minimum share of investments in transitional and enabling activities, as it does not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 5% of the net assets of the sub-fund.

What is the minimum share of socially sustainable investments?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the minimum share of environmentally and socially sustainable investments shall in total be at least 5% of the net assets of the sub-fund.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

This sub-fund promotes a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund will invest into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments can include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments is to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments can be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund does not consider any minimum environmental or social safeguards on these remaining investments.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

This sub-fund has not designated a reference benchmark to determine whether it is aligned with the environmental and/or social characteristics that it promotes.

Where can I find more product specific information online?

The sub-fund has not been launched yet. The Board of Directors of the Investment Company may at any time elect to launch new share classes for the sub-fund in accordance with the share class features as specified in the general section of the Sales Prospectus.

Summary of tax regulations of importance to investors (subject, without limitation, to taxation in Germany) (As of: April 27, 2022)

Fund organized under Luxembourg law

General information

The statements on tax regulations only apply to investors who are subject, without limitation, to taxation in Germany. Investors subject, without limitation, to taxation in Germany are hereinafter also referred to as “German tax residents.” We recommend that, prior to acquiring units of the fund described in this Sales Prospectus, the foreign investor individually discuss with his tax advisor any possible tax consequences in his country of residence arising from the acquisition of units. Foreign investors are investors not subject, without limitation, to taxation in Germany. They are hereinafter also referred to as “non-resident taxpayers.”

The statements contained herein relate to the legal situation since January 1, 2018. Where fund units were acquired prior to January 1, 2018, additional circumstances particular to such fund investment may arise that are not described here in further detail.

As an estate, the foreign fund is, in principle, exempt from corporate income tax and trade tax in Germany. It is, however, partially subject to corporate income tax on its domestic income from equity investments and on other domestic income, in the sense of the limited income tax liability, not including gains on the sale of units in corporations. The tax rate is 15 percent.

However, the investment income is taxable for the individual investor as income from capital assets, which is subject to income tax, provided that it exceeds the saver’s flat allowance of EUR 801 p.a. (for single persons or spouses assessed separately) or EUR 1,602 p.a. (for spouses assessed jointly) when added to any other investment income.

Income from capital assets is generally subject to a 25-percent withholding tax (plus solidarity surcharge and, where applicable, church tax). Income from capital assets also includes the income from investment funds (investment income), i.e., the fund’s distributions, the advance income estimates and the gains on the sale of the units. Under certain conditions, investors can receive a lump-sum portion of this investment income tax-free (“partial exemption”).

In general, for the individual investor, the withholding of tax acts as a final payment (“final withholding tax”), so that, as a rule, income from capital assets is not declared in the income tax return. The institution maintaining the custody account usually offsets income subject to withholding against losses and foreign withholding taxes arising from direct investment.

However, the withholding tax does not act as a final payment if the investor’s personal tax rate is lower than the final withholding rate of 25 percent. In this case, income from capital assets may be declared in the income tax return. The tax office then applies the lower personal tax rate and credits the tax withheld against the personal tax liability (“reduced rate test”).

If income from capital assets was not subject to any withholding (for example, in the event that units are held in custody abroad or because a capital gain on the sale of fund units was realized in a foreign custody account), such income must be declared in the tax return. Within the tax assessment, any income from capital assets is then also subject to the final withholding rate of 25 percent, or, alternatively, the lower personal tax rate.

If units are held as business assets, the income is considered taxable as operating income.

I Units held as personal assets (German tax residents)

1. Distributions

Distributions of the fund are generally taxable.

If the fund meets the tax prerequisites for partial exemption of an equity fund, 30 percent of the distributions are tax-exempt. Equity funds are investment funds that, according to their terms and conditions of investment, continuously invest more than 50 percent of their value or of their gross assets in equity capital investments.

If the fund meets the tax prerequisites for partial exemption of a balanced fund, 15 percent of the distributions are tax-exempt. Balanced funds are investment funds that, according to their terms and conditions of investment, continuously invest at least 25 percent of their value or of their gross assets in equity capital investments.

If the fund does not meet the tax prerequisites for either an equity fund or a balanced fund, no partial exemption is applicable to the distributions.

A tax classification for purposes of the partial exemption of the fund/funds or sub-fund/sub-funds can be found in the Annex to this summary of tax regulations of importance to German investors. The classification may change for the future. In such a case, the fund unit is treated as sold and subsequently acquired on the following day with a new tax classification for partial exemption purposes; any resulting notional capital gain, however, is only taken into account once the units are actually sold.

Taxable distributions are usually subject to the 25-percent withholding tax (plus solidarity surcharge and, where applicable, church tax).

Tax will not be withheld if the investor is a German tax resident and submits an exemption form, provided the taxable income components do not exceed EUR 801 for separate assessment or EUR 1,602 for joint assessment of spouses.

A corresponding exemption also applies if a certificate for persons who are not expected to be assessed for income tax (the “non-assessment certificate”) is submitted.

If a domestic investor has units held in domestic custody, the institution maintaining the custody account, acting as the paying agent, will not withhold tax provided that, prior to the fixed distribution date, it is presented with either an exemption form conforming to the official sample document and covering an adequate amount or a non-assessment certificate issued by the tax office for a maximum of three years. In this case, the investor is credited the full amount of the distribution.

2. Advance income estimates

The advance income estimate (“Vorabpauschale”) is the amount by which the fund’s distributions within a calendar year fall short of the baseline return for that calendar year. The baseline return is determined by multiplying the redemption price of the unit at the beginning of a calendar year by 70 percent of the baseline interest rate, which in turn is derived from long-term government bond market yields. The baseline return is limited to the amount exceeding the difference between the first and last redemption prices determined in the calendar year plus the distributions paid during the calendar year. For the year in which the units were acquired, the advance income estimate is reduced by one-twelfth for each full month preceding the month of acquisition. The advance income estimate is deemed to have accrued on the first workday of the following calendar year.

Advance income estimates are generally taxable.

If the fund meets the tax prerequisites for partial exemption of an equity fund, 30 percent of the advance income estimates are tax-exempt. Equity funds are investment funds that, according to their terms and conditions of investment, continuously invest more than 50 percent of their value or of their gross assets in equity capital investments.

If the fund meets the tax prerequisites for partial exemption of a balanced fund, 15 percent of the advance income estimates are tax-exempt. Balanced funds are investment funds that, according

to their terms and conditions of investment, continuously invest at least 25 percent of their value or of their gross assets in equity capital investments.

If the fund does not meet the tax prerequisites for either an equity fund or a balanced fund, no partial exemption is applicable to the advance income estimate.

A tax classification for purposes of the partial exemption of the fund/funds or sub-fund/sub-funds can be found in the Annex to this summary of tax regulations of importance to German investors. The classification may change for the future. In such a case, the fund unit is treated as sold and subsequently acquired on the following day with a new tax classification for partial exemption purposes; any resulting notional capital gain, however, is only taken into account once the units are actually sold.

Taxable advance income estimates are usually subject to the 25 percent withholding tax (plus solidarity surcharge and, where applicable, church tax).

Tax will not be withheld if the investor is a German tax resident and submits an exemption form, provided the taxable income components do not exceed EUR 801 for separate assessment or EUR 1,602 for joint assessment of spouses.

A corresponding exemption also applies if a certificate for persons who are not expected to be assessed for income tax (the "non-assessment certificate") is submitted.

If a domestic investor has units held in domestic custody, the institution maintaining the custody account, acting as the paying agent, will not withhold tax provided that, prior to the aforementioned receipt date, it is presented with either an exemption form conforming to the official sample document and covering an adequate amount or a non-assessment certificate issued by the tax office for a maximum of three years. No tax is withheld in this case. Otherwise, the investor must provide the domestic institution maintaining the custody account with the amount of tax to be withheld. For this purpose, the institution maintaining the custody account may withdraw the amount of tax to be withheld from a cash account held at the institution in the name of the investor without the consent of the investor. If the investor does not object before the advance income estimate is deemed received, the institution maintaining the custody account may also withdraw the amount of tax to be withheld from a cash account in the name of the investor to the extent that an overdraft facility agreed with the investor for this account has not been utilized. If the investor fails to comply with its obligation to provide the domestic institution maintaining the custody account with the amount of tax to be withheld, the institution maintaining the custody account must inform its competent tax office accordingly. In this case, the unreported advance income estimate must be declared in the investor's income tax return.

3. Capital gains at investor level

If units of the fund are sold, the capital gain is subject to the final withholding rate of 25 percent.

If the fund meets the tax prerequisites for partial exemption of an equity fund, 30 percent of the capital gains are tax-exempt. Equity funds are investment funds that, according to their terms and conditions of investment, continuously invest more than 50 percent of their value or of their gross assets in equity capital investments.

If the fund meets the tax prerequisites for partial exemption of a balanced fund, 15 percent of the capital gains are tax-exempt. Balanced funds are investment funds that, according to their terms and conditions of investment, continuously invest at least 25 percent of their value or of their gross assets in equity capital investments.

If the fund does not meet the tax prerequisites for either an equity fund or a balanced fund, no partial exemption is applicable to the capital gains.

A tax classification for purposes of the partial exemption of the fund/funds or sub-fund/sub-funds can be found in the Annex to this summary of tax regulations of importance to German investors. The classification may change for the future. In such a case, the fund unit is treated as sold and subsequently acquired on the following day with a new tax classification for partial exemption purposes; any resulting notional capital gain, however, is only taken into account once the units are actually sold.

If the units are held in a domestic custody account, the institution maintaining the custody account withholds the tax, taking into account any applicable partial exemptions. The 25-percent withholding tax (plus solidarity surcharge and, where applicable, church tax) can be avoided by submitting an exemption form covering an adequate amount or a non-assessment certificate. If such units are sold by an individual investor at a loss, the amount of that loss – less any reduction based on a partial exemption – may be offset against other positive income from capital assets. If the units are held in a custody account at a domestic institution, and positive income from capital assets was generated at the same institution in the same calendar year, the institution maintaining the custody account will offset the loss.

When determining the capital gain for tax purposes, the gain must be reduced by the advance income estimates applied during the holding period.

II Units held as business assets (German tax residents)

1. Tax-exempt unit class (unit class for "tax-privileged" investors)

As explained above, the fund is partially subject to corporate income tax on certain income.

However, a unit class is tax-exempt if the units in a unit class may only be acquired or held by such tax-privileged investors that are a domestic corporate entity, association of persons or estate that, according to its respective Articles of Incorporation, foundation deed of trust or other founding instrument, solely and directly serves non-profit, charitable or religious purposes, and is actually administered accordingly, or if it is a foundation under public law that solely and directly serves non-profit or charitable purposes, or if it is a legal entity under public law that solely and directly serves religious interests; this shall not apply, however, if the units are held in a for-profit business operation. The same applies to comparable foreign investors with registered offices and administrations in a foreign country that provides official legal and recovery assistance.

A unit class is also tax exempt if the units are held solely or in addition to the above-mentioned tax-privileged investors within the framework of individual retirement arrangements or basic pensions that have been certified in accordance with the German Pension Contracts Certification Act.

The prerequisites for tax exemption of a unit class are that the investors furnish proof of their tax exemption to the fund and that the investment conditions only permit the redemption of units in such a unit class to the investment fund and that the transfer of units in such unit class is excluded.

Furthermore, exemption from the corporate income tax paid at fund level on German dividends and on income from German dividend rights similar to equities also essentially requires that German equities and German dividend rights similar to equities were held by the fund as the beneficial owner for 45 days without interruption within a period of 45 days before and after the investment income was payable, and that the minimum risk of changes in value was 70 percent throughout that entire 45-day period.

Tax exemption amounts that the Company receives in connection with the administration of the fund and that are attributable to income from the unit classes described above must generally be paid out to investors in those unit classes. Notwithstanding the preceding, the Company shall be entitled to transfer exemption amounts directly to the fund for the benefit of the investors in this unit class; new units will not be issued on the basis of this transfer.

Information about tax-exempt unit classes, if there are any unit classes of this nature, is provided in the general and special sections of this Sales Prospectus.

2. Refund of corporate income tax imposed on the fund

The corporate income tax incurred at fund level may be reimbursed to the fund for forwarding to an investor if the investor is a domestic corporate entity, association of persons or estate that,

according to its respective Articles of Incorporation, foundation deed of trust or other founding instrument, solely and directly serves non-profit, charitable or religious purposes, and is actually administered accordingly, or if it is a foundation under public law that solely and directly serves non-profit or charitable purposes, or if it is a legal entity under public law that solely and directly serves religious interests; this shall not apply, however, if the units are held in a for-profit business operation. The same applies to comparable foreign investors with registered offices and administrations in a foreign country that provides official legal and recovery assistance.

The prerequisite for this is that such an investor submits a corresponding application and that the corporate income tax is prorated over the investor's holding period. In addition, the investor must be the legal and beneficial owner of the units for a period of at least three months before receiving the income of the fund subject to corporate income tax, and there must be no obligation to transfer the units to another person. Furthermore, with regard to the corporate income tax paid at fund level on German dividends and on income from German dividend rights similar to equities, such refunding also essentially requires that German equities and German dividend rights similar to equities were held by the fund as the beneficial owner for 45 days without interruption within a period of 45 days before and after the investment income was payable, and that the minimum risk of changes in value was 70 percent throughout that entire 45-day period ("45-day rule").

The refund application must be accompanied by documentation of tax-exempt status and by a statement of investment fund unit holdings issued by the institution maintaining the custody account. The statement of investment fund unit holdings is a certificate conforming to the official sample document documenting the extent to which units were held by the investor during the entire calendar year, as well as the timing and extent of any purchases and sales of units during the calendar year.

The corporate income tax incurred at the fund level may also be refunded to the fund for forwarding to an investor if the units in the fund are held within the framework of individual retirement arrangements or basic pensions that have been certified in accordance with the German Pension Contracts Certification Act. This requires the provider of an individual retirement arrangement or basic pension contract to inform the fund within one month of the fund's fiscal year-end at which points in time and in what amounts units were acquired or sold. The aforementioned 45-day rule must additionally be taken into account.

There is no obligation on the part of the fund or the Company to have the corresponding corporate income tax refunded for forwarding to the investor. In particular, the fund or the Company can make the application for such a refund dependent on a

minimum expected refund amount and/or on an agreement for reimbursement of expenses by the investor.

Given the elevated complexity of this rule, it may be beneficial to consult with a tax advisor.

3. Distributions

Distributions of the fund are generally subject to individual or corporate income tax and to trade tax.

If the fund meets the tax prerequisites for partial exemption of an equity fund, 60 percent of the distributions are tax-exempt for income tax purposes, and 30 percent for trade tax purposes, if the units are held by natural persons as business assets. For taxable corporate entities, 80 percent of the distributions are generally tax-exempt for corporation tax purposes, and 40 percent for trade tax purposes. For corporate entities that are life or health insurers or pension funds and in which the units are attributable to the investments, and for those that are credit institutions and in which the units are allocable to the trading portfolio as defined by article 340e (3) HGB or that at the time of addition to the business assets are to be carried as current assets, 30 percent of the distributions are tax exempt for corporate income tax purposes, and 15 percent for trade tax purposes. Equity funds are investment funds that, according to their terms and conditions of investment, continuously invest more than 50 percent of their value or of their gross assets in equity capital investments.

If the fund meets the tax prerequisites for partial exemption of a balanced fund, 30 percent of the distributions are tax-exempt for income tax purposes, and 15 percent for trade tax purposes, if the units are held by natural persons as business assets. For taxable corporate entities, 40 percent of the distributions are generally tax-exempt for corporation tax purposes, and 20 percent for trade tax purposes. For corporate entities that are life or health insurers or pension funds and in which the units are attributable to the investments, and for those that are credit institutions and in which the units are allocable to the trading portfolio as defined by article 340e (3) HGB or that at the time of addition to the business assets are to be carried as current assets, 15 percent of the distributions are tax exempt for corporate income tax purposes, and 7.5 percent for trade tax purposes. Balanced funds are investment funds that, according to their terms and conditions of investment, continuously invest at least 25 percent of their value or of their gross assets in equity capital investments.

If the fund does not meet the tax prerequisites for either an equity fund or a balanced fund, no partial exemption is applicable to the distributions.

A tax classification for purposes of the partial exemption of the fund/funds or sub-fund/sub-funds can be found in the Annex to this summary

of tax regulations of importance to German investors. The classification may change for the future. In such a case, the fund unit is treated as sold and subsequently acquired on the following day with a new tax classification for partial exemption purposes; any resulting notional capital gain, however, is only taken into account once the units are actually sold.

Distributions are usually subject to the 25-percent withholding tax (plus solidarity surcharge).

If the tax prerequisites for an equity or balanced fund are met, the partial-exemption rate applicable for individual investors, i.e., 30 percent in the case of an equity fund and 15 percent in the case of a balanced fund, is applied consistently for withholding purposes.

4. Advance income estimates

The advance income estimate ("Vorabpauschale") is the amount by which the fund's distributions within a calendar year fall short of the baseline return for that calendar year. The baseline return is determined by multiplying the redemption price of the unit at the beginning of a calendar year by 70 percent of the baseline interest rate, which in turn is derived from long-term government bond market yields. The baseline return is limited to the amount exceeding the difference between the first and last redemption prices determined in the calendar year plus the distributions paid during the calendar year. For the year in which the units were acquired, the advance income estimate is reduced by one-twelfth for each full month preceding the month of acquisition. The advance income estimate is deemed to have accrued on the first workday of the following calendar year.

Advance income estimates are generally subject to individual or corporate income tax and to trade tax.

If the fund meets the tax prerequisites for partial exemption of an equity fund, 60 percent of the advance income estimates are tax-exempt for income tax purposes, and 30 percent for trade tax purposes, if the units are held by natural persons as business assets. For taxable corporate entities, 80 percent of the advance income estimates are generally tax-exempt for corporation tax purposes, and 40 percent for trade tax purposes. For corporate entities that are life or health insurers or pension funds and in which the units are attributable to the investments, and for those that are credit institutions and in which the units are allocable to the trading portfolio as defined by article 340e (3) HGB or that at the time of addition to the business assets are to be carried as current assets, 30 percent of the advance income estimates are tax exempt for corporate income tax purposes, and 15 percent for trade tax purposes. Equity funds are investment funds that, according to their terms and conditions of investment, continuously invest more than 50 percent of their value or of their gross assets in equity capital investments.

If the fund meets the tax prerequisites for partial exemption of a balanced fund, 30 percent of the advance income estimates are tax-exempt for income tax purposes, and 15 percent for trade tax purposes, if the units are held by natural persons as business assets. For taxable corporate entities, 40 percent of the advance income estimates are generally tax-exempt for corporation tax purposes, and 20 percent for trade tax purposes. For corporate entities that are life or health insurers or pension funds and in which the units are attributable to the investments, and for those that are credit institutions and in which the units are allocable to the trading portfolio as defined by article 340e (3) HGB or that at the time of addition to the business assets are to be carried as current assets, 15 percent of the advance income estimates are tax exempt for corporate income tax purposes, and 7.5 percent for trade tax purposes. Balanced funds are investment funds that, according to their terms and conditions of investment, continuously invest at least 25 percent of their value or of their gross assets in equity capital investments.

If the fund does not meet the tax prerequisites for either an equity fund or a balanced fund, no partial exemption is applicable to the advance income estimate.

A tax classification for purposes of the partial exemption of the fund/funds or sub-fund/sub-funds can be found in the Annex to this summary of tax regulations of importance to German investors. The classification may change for the future. In such a case, the fund unit is treated as sold and subsequently acquired on the following day with a new tax classification for partial exemption purposes; any resulting notional capital gain, however, is only taken into account once the units are actually sold.

Advance income estimates are usually subject to the 25-percent withholding tax (plus solidarity surcharge).

If the tax prerequisites for an equity or balanced fund are met, the partial-exemption rate applicable for individual investors, i.e., 30 percent in the case of an equity fund and 15 percent in the case of a balanced fund, is applied consistently for withholding purposes.

5. Capital gains at investor level

Gains on the sale of the units are generally subject to individual or corporate income tax and to trade tax. When determining the capital gain for tax purposes, the gain must be reduced by the advance income estimates applied during the holding period.

If the fund meets the tax prerequisites for partial exemption of an equity fund, 60 percent of the capital gains are tax-exempt for corporation tax purposes, and 30 percent for trade tax purposes, if the units are held by natural persons as business assets. For taxable corporate entities, 80 percent of the capital gains are generally tax-exempt for

corporation tax purposes, and 40 percent for trade tax purposes. For corporate entities that are life or health insurers or pension funds and in which the units are attributable to the investments, and for those that are credit institutions and in which the units are allocable to the trading portfolio as defined by article 340e (3) HGB or that at the time of addition to the business assets are to be carried as current assets, 30 percent of the capital gains are tax exempt for corporate income tax purposes, and 15 percent for trade tax purposes. Equity funds are investment funds that, according to their terms and conditions of investment, continuously invest more than 50 percent of their value or of their gross assets in equity capital investments.

If the fund meets the tax prerequisites for partial exemption of a balanced fund, 30 percent of the capital gains are tax-exempt for corporation tax purposes, and 15 percent for trade tax purposes, if the units are held by natural persons as business assets. For taxable corporate entities, 40 percent of the capital gains are generally tax-exempt for corporation tax purposes, and 20 percent for trade tax purposes. For corporate entities that are life or health insurers or pension funds and in which the units are attributable to the investments, and for those that are credit institutions and in which the units are allocable to the trading portfolio as defined by article 340e (3) HGB or that at the time of addition to the business assets are to be carried as current assets, 15 percent of the capital gains are tax exempt for corporate income tax purposes, and 7.5 percent for trade tax purposes. Balanced funds are investment funds that, according to their terms and conditions of investment, continuously invest at least 25 percent of their value or of their gross assets in equity capital investments.

In the event of a loss on a sale, the loss amount corresponding to the respective applicable partial exemption is not deductible at investor level.

If the fund does not meet the tax prerequisites for either an equity fund or a balanced fund, no partial exemption is applicable to the capital gains.

A tax classification for purposes of the partial exemption of the fund/funds or sub-fund/sub-funds can be found in the Annex to this summary of tax regulations of importance to German investors. The classification may change for the future. In such a case, the fund unit is treated as sold and subsequently acquired on the following day with a new tax classification for partial exemption purposes; any resulting notional capital gain, however, is only taken into account once the units are actually sold.

The gains on the sale of the units are usually not subject to withholding of investment income tax.

6. Simplified overview for the taxation of regular business investor groups

	Distributions	Advance income estimates	Capital gains
German investors			
Sole proprietorships	<p><u>Investment income tax:</u> 25% (the partial exemption for equity funds of 30%, or 15% for balanced funds, is taken into account)</p> <p><u>Substantive taxation:</u> Individual income tax and trade tax, taking into account partial exemptions where applicable (equity funds: 60% for individual income tax / 30% for trade tax; balanced funds: 30% for individual income tax / 15% for trade tax)</p>		<p><u>Investment income tax:</u> No withholding</p>
Regularly taxed corporations (typically industrial companies; banks, unless units are held in their trading portfolio; property insurers)	<p><u>Investment income tax:</u> No withholding for banks, otherwise 25% (the partial exemption for equity funds of 30%, or 15% for balanced funds, is taken into account)</p> <p><u>Substantive taxation:</u> Corporate income tax and trade tax, taking into account partial exemptions where applicable (equity funds: 80% for corporate income tax / 40% for trade tax; balanced funds: 40% for corporate income tax / 20% for trade tax)</p>		<p><u>Investment income tax:</u> No withholding</p>
Life and health insurance companies and pension funds with which the fund units are attributable to investments	<p><u>Investment income tax:</u> No withholding</p> <p><u>Substantive taxation:</u> Corporate income tax and trade tax, unless the commercial accounts contain a provision for premium refunds that is also recognized for tax purposes, taking into account partial exemptions where applicable (equity funds: 30% for corporate income tax / 15% for trade tax; balanced funds: 15% for corporate income tax / 7.5% for trade tax)</p>		
Banks that hold the fund units for trading	<p><u>Investment income tax:</u> No withholding</p> <p><u>Substantive taxation:</u> Corporate income tax and trade tax, taking into account partial exemptions where applicable (equity funds: 30% for corporate income tax / 15% for trade tax; balanced funds: 15% for corporate income tax / 7.5% for trade tax)</p>		
Tax-exempt non-profit, charitable or religious investors (in particular, churches and non-profit foundations)	<p><u>Investment income tax:</u> No withholding</p> <p><u>Substantive taxation:</u> Tax-exempt – in addition, the corporate income tax paid at fund level can be refunded on request under certain conditions.</p>		
Other tax-exempt investors (in particular, pension funds, burial funds and provident funds, provided that the requirements provided for in the German Corporate Tax Act are met)	<p><u>Investment income tax:</u> No withholding</p> <p><u>Substantive taxation:</u> Tax-exempt</p>		

It is assumed that units are held in custody in Germany. A surtax called the “solidarity surcharge” is levied on investment income tax, individual income tax and corporate income tax. To obtain

exemption from withholding of investment income tax, it may be necessary to submit certificates to the institution maintaining the custody account in sufficient time.

III Non-resident taxpayers

If a non-resident taxpayer has the fund units held in custody by a domestic institution, no tax will be withheld on distributions, advance income estimates and the from the sale of the units, provided that the taxpayer submits proof of non-resident status. If the institution maintaining the custody account is not aware of the investor's non-resident status, or if such status is not verified in time, the foreign investor has no option but to apply for a refund of the tax withheld as provided for by the German Fiscal Code (Abgabenordnung)¹. The tax office of the institution maintaining the custody account will be responsible for processing such a refund application.

IV Solidarity surcharge

A solidarity surcharge of 5.5 percent is levied on the amount of tax to be withheld from distributions, advance income estimates and gains on the sale of units.

V Church tax

Provided that income tax is already being withheld by a domestic institution maintaining the custody account (withholding agent), the attributable church tax is regularly levied as a surcharge on the tax withheld at the church tax rate of the religious group to which the church tax payer belongs. The deductibility of the church tax as a special expense is taken into account and used to reduce withholding.

VI Foreign withholding tax

Local withholding tax is in some cases retained at source on fund income generated abroad. Such withholding tax cannot be taken into account to reduce the tax liability of investors.

VII Consequences of merging investment funds

In cases of the merger of foreign investment funds to which the same partial-exemption rate is applicable and where both are subject to the same law of a EU state or of a third country that provides official legal and recovery assistance, unrealized gains will not be disclosed at the level of the investors, i.e., a transaction such as this is tax neutral. In general, both contract-form (e.g., Luxembourg FCP) and corporate-form (e.g., Luxembourg SICAV) investment funds can be merged on a tax-neutral basis.

¹ Article 37 (2) of the German Fiscal Code.

If the applicable partial-exemption rate of the transferring investment fund is different from that of the receiving investment fund, the unit of the transferring investment fund is treated as sold, and the unit of the receiving investment fund is treated as acquired. The gain on the notional sale is only deemed to have accrued once the unit of the receiving investment fund is actually sold. Once the notional acquisition has taken place, the partial-exemption rate of the receiving investment fund shall be applied.

Tax-neutral cross-border mergers are not possible. If a merger of investment funds is not tax-neutral, what takes place for tax purposes is a sale of the units of the transferring investment fund and a purchase of the units of the receiving investment fund.

VIII Special notice for German tax residents using foreign custody accounts

Particular circumstances must be taken into account by German investors holding units of the fund in a foreign custody account. In particular,

the foreign institution maintaining the custody account will not withhold tax, which means that German tax residents must declare in their tax returns all distributions, advance income estimates and gains realized on the sale of units (regarding the calculation of capital gains, see points I. 3 and II. 5 above, respectively). It must be noted here that distributions and advance income estimates must be declared in the tax return every year.

Given the transitional provisions to the legal situation applicable since January 1, 2018, a large number of particular circumstances must be considered (e.g., any inflow of taxable capital gains on the sale of units applicable as of December 31, 2017, in the context of the actual unit sale).

If foreign custody accounts are to be used, we recommend that, prior to acquiring units of the fund described in this Sales Prospectus, investors consult their tax advisor and individually clarify any possible tax consequences arising from the acquisition of units.

IX Notification of foreign interests

Investors subject, without limitation, to taxation in Germany should note that they are to report the acquisition and sale of certain applicable interests in the fund to the German tax authority responsible as per article 138 (2) of the German Fiscal Code. However, exceptions to this may apply, e.g., in the case of exchange-traded funds.

General note

The information provided here is based on our understanding of current tax laws. It is addressed to persons subject, without limitation, to individ-

ual or corporate income tax in Germany. However, no responsibility can be assumed for potential

changes in the tax structure through legislation, court decisions or the orders of the tax authorities.

Tax risks from hedging transactions for major investors

The possibility that investment income tax on German dividends and income from domestic dividend rights similar to equities that the investor originally generates may not be creditable or refundable in whole or in part cannot be ruled out. The investment income tax is fully offset or refunded if (i) the investor holds German equities and German dividend rights similar to equities for 45 days without interruption within a period of 45 days before and after the investment income was payable (91 days in total) and (ii) bears no less than 70% of the risk of a decline in value of the units or dividend rights without interruption throughout

that entire 45-day period ("45-day rule"). Moreover, in order to receive an investment income tax credit, there must not be an obligation to directly or indirectly pay the investment income to another person (e.g., through swaps, securities lending and borrowing, repurchase agreement transactions). For this reason, hedging or forward transactions that directly or indirectly hedge the risk arising from German equities or German dividend rights similar to equities may be detrimental. Hedging transactions on value and price indices are considered to be indirect hedges. To the extent that the fund is to be considered a related party of the

investor and enters into hedging transactions, these can result in these being attributed to the investor, and the investor therefore failing to comply with the 45-day rule.

In the event that investment income tax is not withheld from corresponding income that the investor originally generates, hedging transactions of the fund can result in these being attributed to the investor and the investor being required to remit the investment income tax to the tax office.

ANNEX – Tax classification overview for partial tax exemption purposes for DWS Invest

Fund	Classification for partial tax exemption purposes
DWS Invest Africa	Equity fund
DWS Invest Artificial Intelligence	Equity fund
DWS Invest Asian Bonds	Fund with no partial tax exemption
DWS Invest Asian Small/Mid Cap	Equity fund
DWS Invest Brazilian Equities	Equity fund
DWS Invest China Bonds	Fund with no partial tax exemption
DWS Invest Chinese Equities	Equity fund
DWS Invest Conservative Impact Bonds	Fund with no partial tax exemption
DWS Invest Conservative Opportunities	Fund with no partial tax exemption
DWS Invest Convertibles	Fund with no partial tax exemption
