Management Company: Deutsche Asset & Wealth Management Investment S.A., a member of the Deutsche Bank Group.

Objectives and investment policy

The objective of the investment policy is to achieve sustained capital appreciation that exceeds the benchmark (MSCI India 10/40 (RI)). In order to achieve this, the fund invests primarily in equities of issuers having their registered office in India or of issuers having their registered office outside India but that conduct their principal business activity in India. In addition, the fund may invest in equities that do not satisfy the requirements of the preceding sentence. In this context, the selection of individual investments is the responsibility of the fund management. The fund is oriented to the benchmark. It does not track it exactly but attempts to exceed its performance and can therefore deviate substantially - both positively and negatively - from the benchmark. The currency of the fund is EUR. Returns and gains are not distributed but are reinvested in the fund. You may request the redemption of shares on each valuation day. The redemption may only be suspended in exceptional cases taking into account your interests as an investor.

Risk and reward profile

The calculation of the risk and reward profile is based on historical data that cannot be used as a reliable indicator for the future risk profile. This risk indicator is subject to changes; the classification of the fund may change over time and cannot be guaranteed. Even a fund that is classified in the lowest category (category 1) does not represent a completely risk-free investment. The fund is classified in category 6 because its share price may fluctuate strongly and the likelihood of both losses and gains may therefore be high. The following risks could be of particular significance for the fund. These risks can impair the performance of the fund and thus impact negatively on the net asset value per unit and on the capital invested by the investor. The unit value may at any time fall below the purchase price paid by the client.

The fund invests in equities. Equities are subject to strong price fluctuations and thus also to the risk of price decreases. The fund invests in emerging markets. Investing in assets from the emerging markets generally entails a greater risk (potentially including considerable legal, economic and political risks) than investing in assets from the markets of established countries. A more detailed description of risks and other general information can be found under "Risks" in the sales prospectus.
