KBI Global Energy Transition Fund (the "Fund"): Class C USD
A Sub-Fund of KBI Funds ICAV

ISIN: IE00BDGTG145

Amundi Ireland Limited acts as UCITS management company of the Fund (the "Manager")

Objectives and Investment Policy

The Fund aims to achieve the highest possible return for its shareholders by investing primarily in shares of international companies involved in the alternative energy sector.

The Fund will invest primarily in shares of companies trading on the recognised stock exchanges worldwide that operate in the alternative energy sector on a sustainable basis. The Fund will not invest more than 30% of net assets in emerging markets.

The Fund is considered to be actively managed in reference to the Wilderhill New Energy Global Innovation Index by virtue of the fact that it uses the Index for performance comparison purposes. However the Index is not used to define the portfolio composition of the Fund or as a performance target and the Fund may be wholly invested in securities which are not constituents of the Index.

In addition to the charges set out in the **Charges** section, the Fund will incur portfolio transaction costs which are paid from the assets of the Fund. These tend to be higher when investing outside Europe.

This Fund may not be appropriate for investors who plan to withdraw their money within 5 years.

This share class does not pay a dividend. Any income arising from the share class will be re-invested.

Investors can buy and sell shares in the Fund on any business day in Ireland. Provided instructions are received before 11 a.m. Irish time, shares will be bought and sold using the prices of that day.

Please refer to the Prospectus and Fund Supplement for more detailed information.

Risk and Reward Profile

- Historical data may not be a reliable indication for the future.
- The risk category shown is not guaranteed and may shift over time.
- The lowest category does not mean 'risk free'.

The Fund is ranked in risk and reward category 6 as the value of stockmarket investments and the income from them will fluctuate. This will cause the Fund price to fall as well as rise and you may not get back the original amount you invested.

The Fund is also subject to risks which are not included in the calculation of the risk-reward indicator associated with the following:

Liquidity Risk: Liquidity in some holdings may be low. The buying and selling of these assets may be time consuming and done at unfavourable prices.

Counterparty Risk: There is a risk that the counterparty to a transaction will fail to fulfill their side of the contract which in turn can affect the value of the Fund.

Emerging Markets Risk: Emerging markets carry a greater risk of social, political and economic instability, which along with the absence of developed legal structures may adversely affect the value of assets.

Other risks that may affect the Fund are currency risk, operational risk and interest rate risk.

A more detailed description of the risk factors that may apply to the Fund is set out in the Prospectus.
