What is this product?

Type

This investment product is a sub-fund of Kempen International Funds SICAV, a Luxembourg based investment company.

Term

The product has no maturity date. The product manufacturer is not entitled to terminate the product unilaterally.

Objective

Kempen (Lux) Global Small-cap Fund aims to achieve for investors long-term capital growth. This product can also generate income for investors.

This product invests in equity shares of small companies listed on the global stock exchanges. Van Lanschot Kempen Investment Management NV selects the investment funds and manages the portfolio, with the aim of achieving a higher return in the long-term than the MSCI World Small Cap Index.

This product is actively managed and may hold investments that are not included in the benchmark. The investment manager is allowed to deviate significantly from the benchmark.

The product falls under the scope of article 8 of the SFDR which means that the product promotes environmental and/or social characteristics. While it does not have as its objective a sustainable investment, it will have a minimum proportion of sustainable

investments. The product considers principle adverse impact on sustainability factors.

For this aim shares will be selected of smaller listed companies, while at the same time complying with strict exclusion and sustainability criteria. These are defined as companies with a maximum market capitalisation at the time of initial purchase of either EUR 8 billion, or the highest market capitalisation of any company included in the MSCI World Small Cap Index, whichever is the greater. The portfolio construction process involves a disciplined end to end framework initially utilizing proprietary in-house stock filters screening for high quality and attractively valued stocks. Thereafter, fundamental in-house research is carried out to identify high conviction investment ideas. The end result is a portfolio of 60-90 stocks, well-diversified across all regions and sectors.

Financial derivative instruments such as options, warrants and futures may be used for hedging purposes and for efficient portfolio management.

The investment return is determined by the dividend received and the change in value of the shares of the companies in which it invests. The (changes in the) expectations regarding economic growth, the growth in specific market sectors and the success and growth of the specific companies have an impact on the return. If these investments are traded in a currency other than the Euro, then changes in exchange rates also affect the return. In addition, the return is influenced by the changes that are made to the portfolio. The product's costs lower the return.

The return will be calculated daily in USD based on the value of the portfolio.

In the view of the long-term objective and because investments in equity shares can also yield a negative return, it is recommended to hold an investment in this product at least 5 years.

The shares of this product can normally be bought or sold on any business day in Luxembourg.

This product will distribute a cash dividend at least once a year.

Intended retail investor

This product can only be purchased by institutional investors, e.g. for retail investors in the context of discretionary asset management.

This product is aimed at investors who pursue long-term capital growth and thereby accept a negative return in a bad investment year.

Investing in this product is appropriate for both the novice investor with at least some knowledge of the financial market and investment products as well as the advanced investor.

This product is aimed at investors who can invest a minimum of USD 50 000 and want to be able to subscribe or redeem daily.

This investment is intended as a supplement to a well-diversified portfolio.

Information for investors

The depositary is BNP Paribas, Luxembourg Branch.

The net asset value will be published daily on the website.

This product is a sub-fund of Kempen International Funds SICAV. The information about this product is therefore included in the prospectus and the (semi-)annual reports of Kempen International Funds SICAV.

The conversion of this product to another product (different sub-fund of Kempen International Funds SICAV) can be done via a redemption and subscription order. The conditions for this are described in the prospectus and can be found on the website.

The risk-indicator and the performance scenarios are based on the volatility of the share price. The price applied is that of the product (and over the period before the product launch of an investment in a comparable share class).

What are the risks and what could I get in return?

Risk indicator

The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. You may not be able to cash in early. You may have to pay significant extra costs to cash in early.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as class 5 out of 7, which is a medium-high risk class. This rates the potential losses from future performance at a medium-high level, and poor market conditions will likely impact the capacity to pay you.

Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Due to effects of unusual market conditions, other risks could be triggered. Please see the prospectus for more detail.

This product does not include any protection from future market performance so you could lose some or all of your investment.

Performance scenarios

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The unfavourable, moderate, and favourable scenarios shown are illustrations using the worst, average, and best performance of the product (and over the period before the product launch of an investment in a comparable share class) over the last 10 years. Markets could develop very differently in the future.

Recommended holding period: 5 years
Example Investment: 10 000 USD

Scenarios		If you exit after 1 year	If you exit after 5 years
Minimum	There is no minimum guaranteed return. You could lose some or all of your investment		
Stress	What you might get back after costs	1 360 USD	1 190 USD
	Average return each year	- 86.44 %	- 34.7 %
Unfavourable	What you might get back after costs	7 070 USD	8 470 USD
	Average return each year	- 29.26%	- 3.27%
Moderate	What you might get back after costs	10 800 USD	16 780 USD
	Average return each year	7.97%	10.91%
Favourable	What you might get back after costs	19 820 USD	22 880 USD
	Average return each year	98.2%	18%

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

The stress scenario shows what you might get back in extreme market circumstances.

Unfavourable: This type of scenario occurred for an investment in this product (and over the period before the product launch of an investment in a comparable share class) between September 2021 and November 2022.

Moderate: This type of scenario occurred for an investment in this product (and over the period before the product launch of an investment in a comparable share class) between December 2014 and November 2019.

Favourable: This type of scenario occurred for an investment in this product (and over the period before the product launch of an investment in a comparable share class) between July 2016 and June 2021.

What happens if Van Lanschot Kempen Investment Management NV is unable to pay out?

The product's assets are held separately from Van Lanschot Kempen Investment Management NV and safeguarded by a depositary. A pay-out of the product's assets is thus not affected by the financial position or potential default of Van Lanschot Kempen Investment Management NV. BNP Paribas, Luxembourg Branch has been appointed as depositary of the product's assets.

What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year you would get back the amount that you invested (0% annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario
- EUR 10 000 is invested

	If you exit after 1 year	If you exit after 5 years
Total costs	149 USD	891 USD
Annual cost impact (*)	1.49 %	1.15 % each year

(*) "This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 12.06% before costs and 10.91% after costs."

Composition of Cost

One-off costs upon entry or exit		If you exit after 1 year
Entry costs	0.30% is the current upward swing factor that can be applicable of the amount you pay when entering this investment. An upward swing factor is calculated if there are more buyers than sellers on the day you buy this product. The swing factor can be changed, due to market circumstances, but has a maximum of 5.00%.	30 USD
Exit costs	0.25% is the current downward swing factor that can be applicable of your investment before it is paid out to you. A downwards swing factor is calculated if there are more sellers than buyers on the day you sell your product. The swing factor can be changed due to market circumstances but has a maximum of 5.00%.	25 USD
Ongoing costs taken each year		
Management fees and other administrative or operating costs	0.91% of the value of your investment per year. This is an estimate based on actual costs over the last year.	93 USD
Transaction costs	0.01% of the value of your investment per year. This is an estimate of the costs incurred when we buy and sell the underlying investments for the product. The actual amount will vary depending on how much we buy and sell.	1 USD
Incidental costs taken under specific conditions		
Performance fees	There is no performance fee for this product.	0 USD

How long should I hold it and can I take money out early?

Recommended holding period: 5 years

Given the nature of the underlying investments of the product and its objective in the long-term, a minimum holding period of 5 years is recommended.

Buy and sell orders for this product can be placed on any business day in Luxembourg.

How can I complain?
