**Risk and reward profile**

**Explanation of the indicator and its main limitations:**

The diversified exposure to interest rate and credit risk explains the UCI's classification in this category.

The historical data used may not provide a reliable indication of the UCI's future risk profile.

We can give no assurance that the category displayed will not change, and the classification may change over time.

The lowest category does not imply a risk-free investment. There is no capital guarantee.

**Other material risk factors not incorporated into the indicator:**

- **Credit Risk:** represents the potential risk that an issuer defaults or its creditworthiness declines, which would lead to a fall in the price of its securities and, hence, a decrease in the Fund's net asset value.
- **Liquidity risk:** risk associated with the low liquidity of the underlying markets, rendering them sensitive to large buy and sell movements.
- **Risks associated with derivatives:** Use of complex products such as derivatives may increase losses.

The materialisation of one of these risks may result in a decline in the net asset value of the UCI. The other risks are stipulated in the prospectus.
