### Objectives and Investment Policy

#### Objectives and Investment Policy

The Sub-Fund is actively managed. The MSCI World TR ND index is used for performance comparison as well as for internal risk monitoring purposes, without implying any particular constraints to the Sub-Fund's investments. Securities targeted by the Sub-Fund can be similar to those of the index to an extent that varies overtime but their weighting is expected to materially differ. The performance of the Sub-Fund may deviate materially from that of the index. The Sub-Fund aims to generate capital growth over the long term. It mainly invests in equity securities issued by companies worldwide, that are significantly driven by the ageing population theme across multiple sectors (e.g. healthcare products and services, as well as healthy food, cosmetics, leisure, financial planning etc.). The Sub-Fund follows an active, high conviction investment approach. In selecting the individual stocks, the Investment Manager is guided by its own financial analysis of companies. The result is a portfolio of 40 to 80 different companies. The Investment Manager is authorized to use financial derivative instruments for hedging purposes or for EPM but not as part of the investment strategy. As part of its Emerging Market exposure, the Sub-Fund may invest up to 20% of its

net assets in shares issued by mainland China in corporated companies (including China A-Shares). The Sub-Fund is a product which promotes environmental or social characteristics or a combination of those characteristics for the purposes of article 8 of the Sustainable Finance Disclosure Regulation. The Investment Manager adopts a multifaceted approach to the way it analyses the sustainable profile of the Sub-Fund's investments (including sustainability focused screening & scoring, exclusions, restrictions and qualitative and quantitative reviews).

#### What does it mean?

This indicator (SRRRI) represents the annualized historical volatility of the Sub-Fund over a 5-year period. Where there are less than 5 years worth of data, missing returns are simulated using an appropriate benchmark. The SRRRI may change over time and should not be used as an indicator of future risk or returns. Even the lowest risk classification does not imply that the Sub-Fund is risk-free or that capital is necessarily guaranteed or protected.

#### Category

The Sub-Fund invests in a diversified portfolio of shares issued by companies worldwide, the future growth of which is significantly driven by the ageing population theme. Those companies may be small and mid cap companies (as considered in their respective markets), as well as companies incorporated or exercising a prominent part of their business activities in emerging markets.

#### Are there any other particular risks?

The following risks may be materially relevant but may not always be adequately captured by the synthetic risk indicator and may cause additional loss:

- Concentration risk: To the extent that the fund's investments are concentrated in a particular country, market, industry, sector or asset class, the fund may be susceptible to loss due to adverse occurrences affecting that country, market, industry, sector or asset class.
  - Emerging market risk: Significant investment in emerging markets may expose to difficulties when buying and selling investments. Emerging markets are also more likely to experience political uncertainty and investments held in these countries may not have the same protection as those held in more developed countries.
  - Active management risk: Active management relies on anticipating various market developments and/or security selection. There is a risk at any given time that the fund may not be invested in the highest-performing markets or securities. The fund's net asset value may also decline.
- For more details about risk, see appendix B "Risk Factors" of the prospectus.
