What are the risks and what could I get in return?

Risk Indicator

Lower risk

Higher risk

The risk indicator assumes you keep the product for 5 years.

The actual risk can vary significantly if you cash in at an early stage and you may get back less.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact our capacity to pay you.

Be aware of currency risk. If you choose a foreign currency share class you will be exposed to currency risk and your final return will depend on the exchange rate between the foreign currency and your local currency. The risk is not considered in the indicator shown above.

You can find more information about the other risks in the prospectus at www.carnegroup.com.

This product does not include any protection from future market performance so you could lose some or all of your investment.

Performance Scenarios

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The unfavourable, moderate, and favourable scenarios shown are illustrations using the worst, average, and best performance of the product and the suitable benchmark over the last 10 years. Markets could develop very differently in the future.

What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

Costs over Time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year you would get back the amount that you invested (0 % annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario

- CHF 10 000 is invested

	If you exit after 1 year	If you exit after 5 years
Total costs	CHF 876	CHF 1 032
Annual cost impact (*)	8.8%	2.3% each year

We may share part of the costs with the person selling you the product to cover the services they provide to you. They will inform you of the amount.
