Under certain exceptional market conditions, the Fund may invest a significant amount of its assets in cash and cash equivalents, including money market instruments, if the Investment Manager believes that it would be in the best interest of the Fund and its Shareholders. Risk and Reward Profile

1	2	3	4	5	6	7
---	---	---	---	---	---	---

This ranking on the synthetic risk and reward indicator scale is due to the Fund's allocation to fixed income markets. Historical data may not be a reliable indication for the future. The risk category shown is not guaranteed and may shift over time. There is no capital guarantee or protection on the value of the Fund. The lowest category does not mean "risk free".

The following risks are materially relevant to the Fund but are not adequately captured by the synthetic indicator:

Counterparty risk: The counterparty risk is the risk that a counterparty with whom the UCITS has entered into OTC transactions would not be in a position to fulfil its liabilities toward the UCITS.

Credit risk: Credit risk arises from the risk of impairment of the quality of an issuer and/or an issue, which may entail a reduction in the value of the security. It may also arise from default at maturity by an issuer in the portfolio.

Liquidity risk: Liquidity risk represents the price reduction which the UCITS should potentially accept to have to sell certain securities for which there is one insufficient request on the market.

Impact of Management Techniques risk: The risk linked to the management techniques is the risk of increased losses due to the use of financial derivatives instruments and/or securities lending and repurchase transactions.

Please refer to the section entitled "Specific Risks" of the Prospectus for additional details on risks.
