# Report of the Board of Directors

## The Chairman's report

From a macroeconomic perspective, despite the relatively more difficult economic environment, 2023 ended on a positive note for all main asset classes including equities, credit and governments bonds. After a bumpy, but still relatively positive first half of the year, the second half went through a sharp inflation-driven drawdown followed by a rebound fueled by less inflationary pressure and hopes for cuts to come from numerous central banks going into 2024. More specifically, equity markets closed the year on plus, with developed markets outperforming the emerging ones, especially thanks to Japanese and US equities. Meanwhile their Chinese counterparts lost more than 10% and were the main laggards. On the fixed income side, sovereign yields decreased across the curve on both sides of the Atlantic. US and German yield curves moved down but remained inverted. As inverted yield curves are historically an indication of recession, it continues to highlight the remarkable divergences between fixed income and equity investors. These movements have been driven by uncertainties related to hikes or cuts in the short-term, based on the decreasing pace of inflation, while in the long-run investors price more normalised inflation and rates, especially in the US. Interestingly, end of 2023, the inversions of US and European curves were less and more pronounced respectively due to diverging macro trajectories.

Looking at 2024, investors are currently pricing in that inflation rates will continue to go down significantly throughout the year and that the US Federal Reserve will cut rates around five times (or around 125 bps) to avoid recession, which in turn implies that unemployment will remain low and the economy will continue to grow at a decent pace, supporting the growth of earnings while keeping credit defaults under control. Geopolitical risks is another crucial aspect to consider in the current environment, particularly in a context where diversification might be more difficult to achieve since interest rates are expected to be higher for longer and the correlation between bonds and equity is higher compared to previous years.

With regards to Nordea 1, SICAV, N1 or the Company, Assets under Management, AuM, had a negative development going from EUR 74.3 billion end of 2022 to EUR 67.1 billion end of 2023. Also the total amount of net flows into N1 decreased further from a negative EUR 8.1 billion end of 2022 to a negative EUR 10.7 billion end of 2023. As in 2022, the most significant net outflows were experienced by the Low Duration European Covered Bond Fund which saw its asset base continue to decrease.

The total asset base end of 2023 was allocated across 81 sub-funds which is 2 less compared to end of 2022. As in 2022, the Global Climate and Environment Fund is the largest sub-fund with its EUR 9.1 billion in AuM. The European Covered Bond Fund has taken over the second place with regards to AuM with EUR 5.2 billion and the Stable Return Fund is now the third largest sub-fund with EUR 4.8 billion in AuM end of 2023.

At the Annual General Meeting of Shareholders, the Board of Directors will propose that, for the financial year 2023, Nordea 1, SICAV pays the following dividends:

# Report of the Board of Directors (continued)

We, as the Board of Directors, remain committed to offering our investors robust and sustainable solutions and would like to thank all stakeholders involved in the running of Nordea 1, SICAV for their contribution in 2023. In this spirit of commitment and motivation, the Board is looking forward to continuing to service the shareholders in the best way possible also in 2024.

Luxembourg, 21 March 2024

Claude Kremer, Chairman

The information stated in the report is historical and is not representative of future results.

# Corporate Governance Statement

## Introduction

Nordea 1, SICAV (hereafter the “Company”) has been authorised by the Commission de Surveillance du Secteur Financier (the “CSSF”) as an undertaking for collective investment in transferable securities (“UCITS”). The Company complies with the principles of good governance set out in the Association of the Luxembourg Fund Industry (“ALFI”) Code of Conduct Revision 2022 issued by ALFI in June 2022. The board of directors of the Company (the “Board of Directors”) is committed to maintaining the highest standards of corporate governance and is accountable to shareholders for the governance of the Company’s affairs. This statement summarises the corporate governance structure and processes in place for the Company for the period under review.

## Board of Directors Composition

The Board of Directors currently consists of six Directors, (including three independent Directors). The Board of Directors is committed to maintaining an appropriate balance of skills, experience, independence and knowledge amongst its members. The Company’s Articles (the “Articles”), in accordance with Luxembourg law, provides that Directors shall be elected by the shareholders at their annual general meeting and they are subject to the approval of the CSSF. Directors serve until their term ends, they resign, or their mandate is revoked, in accordance with the Company’s Articles.

Members of the Board of Directors shall start an induction program, if required by the Board of Directors, as soon as practicable after the appointment. Each respective Board of Directors shall self-evaluate its work every second year with the aim of developing its working methods and efficiency.

## Board of Directors Responsibilities

The Board of Directors meets at least quarterly and also on an ad hoc basis as required. The Board of Directors is supplied with information in a timely manner.

The Board of Directors is responsible for the overall investment policy, objectives and management of the Company and, as described more fully in the Articles, has broad powers to act on behalf of the Company, including:

- appointing and supervising the management company;
- setting investment policy and approving the appointment of any investment manager or sub- investment manager;
- making all determinations regarding the launch, modification, merger or discontinuation of the Company and share classes, including such matters as timing, pricing, fees, base currency, dividend policy and payment of dividends, liquidation of the Company, and other conditions;
- determining eligibility requirements and ownership restrictions for investors or share class, and what steps may be taken in the case of any violation;
- determining the availability of any share class to any investor or distributor or in any jurisdiction;
- determining when and how the Company will exercise its rights and will distribute or publicise shareholder communications;
- ensuring that the appointments of the management company and the depositary bank are consistent with the 2010 Law and any applicable contracts of the Company;
- determining whether to list any shares on the Luxembourg stock exchange.

The Board of Directors may delegate some of these responsibilities to the management company.

## Board of Directors Remuneration

The Company shall pay an aggregate remuneration to the independent Directors amounting to EUR 100,000 gross per annum, excluding Luxembourg VAT, if any, subject to shareholder approval in the Annual General Meeting and is included within the caption “Approval of Directors’ fees”. Nordea representative do not receive any compensation for their directorship.

## Audit Report

To the Shareholders of  
Nordea 1, SICAV

---

### *Our opinion*

In our opinion, the accompanying financial statements give a true and fair view of the financial position of Nordea 1, SICAV (the "Fund") and of each of its sub-funds as at 31 December 2023, and of the results of their operations and changes in their net assets for the year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

### *What we have audited*

The Fund's financial statements comprise:

- the statement of net assets as at 31 December 2023;
- the statement of operations and changes in net assets for the year then ended;
- the statement of investments in securities and other net assets as at 31 December 2023;
- the statement of derivative instruments as at 31 December 2023; and
- the notes to the financial statements, which include a summary of significant accounting policies.

---

### *Basis for opinion*

We conducted our audit in accordance with the Law of 23 July 2016 on the audit profession (Law of 23 July 2016) and with International Standards on Auditing (ISAs) as adopted for Luxembourg by the "Commission de Surveillance du Secteur Financier" (CSSF). Our responsibilities under the Law of 23 July 2016 and ISAs as adopted for Luxembourg by the CSSF are further described in the "Responsibilities of the "Réviseur d'entreprises agréé" for the audit of the financial statements" section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

We are independent of the Fund in accordance with the International Code of Ethics for Professional Accountants, including International Independence Standards, issued by the International Ethics Standards Board for Accountants (IESBA Code) as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements. We have fulfilled our other ethical responsibilities under those ethical requirements.

---

### *Other information*

The Board of Directors of the Fund is responsible for the other information. The other information comprises the information stated in the annual report but does not include the financial statements and our audit report thereon.

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

PricewaterhouseCoopers, Société coopérative, 2 rue Gerhard Mercator, B.P. 1443, L-1014 Luxembourg  
T: +352 494848 1, F: +352 494848 2900, www.pwc.lu

Cabinet de révision agréé. Expert-comptable (autorisation gouvernementale n°10028256)  
R.C.S. Luxembourg B 65 477 - TVA LU25482518

In connection with our audit of the financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

---

*Responsibilities of the Board of Directors of the Fund for the financial statements*

The Board of Directors of the Fund is responsible for the preparation and fair presentation of the financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors of the Fund determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors of the Fund is responsible for assessing the Fund's and each of its sub-funds' ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of the Fund either intends to liquidate the Fund or close any of its sub-funds or to cease operations, or has no realistic alternative but to do so.

---

*Responsibilities of the "Réviseur d'entreprises agréé" for the audit of the financial statements*

The objectives of our audit are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an audit report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Fund's internal control;
- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Fund;

- conclude on the appropriateness of the Board of Directors of the Fund's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Fund's or any of its sub-funds' ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our audit report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our audit report. However, future events or conditions may cause the Fund or any of its sub-funds (except for Nordea 1 - Chinese Bond Fund, Nordea 1 - Global Equity Market Neutral Fund, Nordea 1 - Emerging Markets Debt Total Return Fund, Nordea 1 - Emerging Stars Corporate Bond Fund and Nordea 1 - Social Bond Fund where a decision to liquidate exists) to cease to continue as a going concern;
- evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

PricewaterhouseCoopers, Société coopérative

Contracts with identical maturity date, same currency bought and same currency sold have been summed together in the above table.

# Notes to the Financial Statements as of 31/12/2023

## Note 1 - General

The Company is organized as a variable capital company, Société d'Investissement à Capital Variable (SICAV) with multiple compartments (each compartment being herein after referred to as a "Sub-fund", and defined as "fund" in the prospectus) under the law of 10 August 1915 relating to commercial companies as amended and part I of the law of 17 December 2010 on undertakings for collective investment (UCI) as amended (the "Law"). The Board of Directors appointed Nordea Investment Funds S.A. as its management company (the "Management Company"). The Management Company is in charge of the portfolio management, the administration and the distribution of the Company. J.P. Morgan SE, Luxembourg Branch has been appointed as depositary of the Company (the "Depositary"). The Company complies with the principles of good governance set out in the Association of the Luxembourg Fund Industry ("ALFI") Code of Conduct Revision 2022 issued by ALFI in June 2022.

At the end of the reporting year, the Company consists of the following Sub-funds:

Name of Sub-fund	Base Currency	Inception Date
Nordea 1 - Alpha 7 MA Fund	EUR	23/05/2018

## a) Sub-funds liquidations and mergers

The following Sub-funds have been liquidated or merged during the year:

Closing Sub-fund	Absorbing Sub-fund	Effective date
Nordea 1 - European Inflation Linked Bond Fund	Liquidation	26/07/2023
Nordea 1 - Nordic Ideas Equity Fund	Nordea 1 - Nordic Equity Fund	27/03/2023
Nordea 1 - North American Value Fund	Nordea 1 - Global Climate Engagement Fund	14/12/2023

# Notes to the Financial Statements as of 31/12/2023 (continued)

## b) Sub-fund name changes

The following Sub-funds have been renamed during the year:

Old name	New name	Effective date
Nordea 1 - Global Bond Fund	Nordea 1 - European Bond Fund	31/08/2023
Nordea 1 - Global Climate and Social Impact Fund	Nordea 1 - Global Impact Fund	31/08/2023
Nordea 1 - Global Gender Diversity Fund	Nordea 1 - Global Diversity Engagement Fund	31/08/2023
Nordea 1 - Global Green Bond Fund	Nordea 1 - Green Bond Fund	31/08/2023
Nordea 1 - Global Social Bond Fund	Nordea 1 - Social Bond Fund	31/08/2023

## Note 2 - Summary of significant accounting policies

The financial statements are prepared in accordance with Luxembourg legal and regulatory requirements relating to investment funds under the going concern basis of accounting except for the Sub-funds liquidated as listed in the *Note 16 - Subsequent events* for which the financial statements have been prepared on a non-going concern basis. The application of the non-going concern basis of accounting has not led to material adjustments to the Sub-funds' published net asset values.

### a) Valuation of investment securities

Investment securities are valued as follows:

1. Securities and Money Market Instruments admitted for official listing on a stock exchange or traded in another regulated market within Europe, North or South America, Asia, Australia, New Zealand or Africa, which operates regularly and is recognised and open to the public are valued on the basis of the last available price at the time when the valuation is carried out. If the same security or money market instrument is quoted on different markets, the quotation of the main market for this security or money market instrument will be used. If there is no relevant quotation or if the quotations are not representative of the fair value, the evaluation will be done in good faith by the Board of Directors or its delegate with a view to establishing the probable bid price for such securities;
2. unlisted securities or unlisted Money Market Instruments are valued on the basis of their probable bid price as determined in good faith by the Board of Directors or its delegate;
3. liquid assets and loans are valued at their nominal value plus accrued interest;
4. units/shares of UCITS authorised according to Directive 2009/65/EEC as amended and/or other assimilated UCI are valued at their last available net asset value;
5. Repurchase agreements are valued by discounting the forward payment to the pricing date whilst subtracting the accrued interest on the pricing date to obtain a clean price.

### b) Net realised gain or loss on sales of investment securities

The net realised gain or loss on sales of securities is determined on the basis of the average cost of the securities sold.

### c) Foreign exchange translation

The financial statements of each Sub-fund of the Company are expressed in the base currency of each sub-fund. Assets and liabilities in currencies other than the base currency are translated into the base currency at the exchange rates prevailing at year-end. Income and expenses in currencies other than the base currency are translated into the base currency at the exchange rates prevailing at payment dates. Resulting foreign exchange gains or losses are included in the Statement of Operations and Changes in Net Assets.

The principal exchange rates used at the end of the year were:

1 EUR = 1.627568 AUD	1 EUR = 0.925660 CHF	1 EUR = 7.87267116 CNH
1 EUR = 7.4531925 DKK	1 EUR = 0.8689704 GBP	1 EUR = 156.341592 JPY
1 EUR = 11.233529 NOK	1 EUR = 4.338463 PLN	1 EUR = 11.086980 SEK
1 EUR = 1.459527 SGD	1 EUR = 1.1052000 USD	

### d) Cost of investment securities

The cost of investment securities denominated in currencies other than the sub-fund's base currency is translated into the base currency at the exchange rate prevailing at the date of purchase.

### e) Dividends and interest

Dividends are recorded net of withholding taxes. They are recognised as income on the date securities are first quoted ex-dividend, to the extent that information thereon is reasonably available to the Sub-fund. Interest on bonds is accrued on a daily basis.

### f) Financial futures contracts

The Company is authorised to buy and sell financial futures contracts. Upon entering into a contract the Company deposits and maintains cash as collateral with the clearing broker Merrill Lynch International Limited. The cash margin calls needed to cover the required contract margins are adjusted daily in the Company cash accounts, and results on open positions are considered as realised at that point in time but reflected as unrealised gain/(loss) in the financial statements ("Unrealised gain on futures already cashed"/ "Unrealised loss on futures already cashed"). The margin is calculated as the difference between the value of the contract at previous valuation day and the financial future value at the valuation day.

# Notes to the Financial Statements as of 31/12/2023 (continued)

## g) Forward foreign exchange contracts

Forward foreign exchange contracts are valued at the forward rate applicable at the Statement of Net Assets date for the period until their maturity.

The net unrealised appreciation/(depreciation) on open forward foreign exchange contracts at year-end is disclosed in the Statement of Net Assets under "Unrealised gain/(loss) on forward foreign exchange contracts".

## h) Equity Swaps

An equity Swap is a bilateral agreement in which a party acquires economic exposure to the performance of a reference asset for a specified term without actually owning that asset.

The underlying asset can be a stock, a basket of stocks, or an index or basket of indices.

Equity swaps are leveraged, which means that they allow an investor to acquire exposure to equity price movements in stocks without the cash outlay required to purchase those stocks.

The unrealised appreciation/(depreciation) is disclosed in the statement of net assets under "Unrealised gain/(loss) on equity swaps." Realised gains/(losses) and change in unrealised appreciation/(depreciation) resulting there from are included in the statement of operations and changes in net assets respectively under the heading "Net realised gains/(losses) on equity swaps" and total return swaps and "Changes in unrealised gain/(loss) on equity swaps."

The cash margin calls needed to cover the required contract margins are adjusted monthly in the Company cash accounts, and results on open positions are reflected as unrealised gain/(loss) in the financial statements ("Unrealised gain on equity swaps already cashed"/"Unrealised loss on equity swaps already cashed").

## i) Credit default swaps (CDS)

A credit default swap is a credit derivative transaction in which two parties enter into an agreement, whereby one party (the protection buyer) pays the other (the protection seller) a fixed periodic coupon for the specified life of the agreement in return for a payment contingent on a credit event related to the underlying reference obligation.

If a credit event occurs, the protection seller would be obliged to make a payment, which may be either: (i) a net cash settlement equal to the notional amount of the swap less the auction value of the reference obligation or (ii) the notional amount of the swap in exchange for the delivery of the reference obligation. Selling protection effectively adds leverage to a fund's portfolio up to the notional amount of swap agreements.

Credit default swaps are marked to market at each NAV calculation date. The market value is based on the valuation elements laid down in the contracts, and is obtained from internal models which is then compared against the counterparty or the Clearing Counterparty (CCP). The initial value of the contracts is equal to the mark-to-market value at inception and an upfront payment is exchanged to ensure that the economic value of the transaction is zero at initiation of the trade for the two parties.

The unrealised appreciation/(depreciation) is disclosed in the statement of net assets under "Unrealised gain/(loss) on credit default swaps." Realised gains/(losses) and change in unrealised appreciation/(depreciation) resulting there from are included in the statement of operations and changes in net assets respectively under the heading "Net realised gains/(losses) on credit default swaps" and "Changes in unrealised gain/(loss) on credit default swaps." The upfront fee paid or received when entering the contract is included in the initial value of the contract and disclosed in the Statement of Net Assets under "Credit default swaps at cost".

## j) Interest rate swaps (IRS)

An interest rate swap is a bilateral agreement in which each party agrees to exchange a series of interest payments for another series of interest payments (usually fixed/floating) based on a notional amount that serves as a computation basis which is usually not exchanged.

Interest rate swaps are marked to market at each NAV calculation date. The market value is based on the valuation elements laid down in the contracts, and is obtained from internal models which are compared against a third party valuation, the counterparty or the Clearing Counterparty (CCP).

The unrealised appreciation/(depreciation) is disclosed in the statement of net assets under "Unrealised gain/(loss) on swaps." Realised gains/(losses) and change in unrealised appreciation/(depreciation) resulting there from are included in the statement of operations and changes in net assets respectively under the heading "Net realised gains/(losses) on swaps" and "Changes in unrealised gain/(loss) on swaps." The upfront fee paid or received when entering the contract, if any, is included in the initial value of the contract and disclosed in the Statement of Net Assets under "Interest rate swaps at cost".

## k) Total Return Swaps (TRS) on Index

A total return swap ("TRS") on Index is an agreement in which one party (total return payer) transfers the total economic performance of a reference asset to the other party (total return receiver) in exchange of payments based on a fixed or variable rate. Total economic performance includes income from dividends, interest and fees, gains or losses from market movements, and credit losses. The Company may only enter into such transactions through regulated financial institutions with a minimum credit rating of investment grade quality which has its registered office in one of the OECD countries.

The unrealised appreciation/(depreciation) is disclosed in the statement of net assets under "Unrealised gain/(loss) on total return swaps." Realised gains/(losses) and change in unrealised appreciation/(depreciation) resulting there from are included in the statement of operations and changes in net assets respectively under the heading "Net realised gains/(losses) on equity swaps and total return swaps" and "Changes in unrealised gain/(loss) on total return swaps."

# Notes to the Financial Statements as of 31/12/2023 (continued)

The cash margin calls needed to cover the required contract margins are adjusted monthly in the Company cash accounts, and results on open positions are reflected as unrealised gain/(loss) in the financial statements ("Unrealised gain on total return swaps already cashed"/"Unrealised loss on total return swaps already cashed").

## l) Options

Options are contracts entitling the holder to purchase or sell a specified number of shares or units of a particular security at a specified price at any time until the contract-stated expiration date. Options purchased are recorded as investments; options written (sold) are recorded as liabilities.

When the exercise of an option results in a cash settlement, the difference between the premium (original option value) and the settlement proceeds is accounted for as a realised gain or loss. When securities are acquired or delivered upon exercise of an option, the acquisition cost or sale proceeds are adjusted by the amount of the premium. When an option is closed, the difference between the premium and the cost to close the position is accounted for as a realised gain or loss. When an option expires, the premium is accounted for as a realised gain for options written or as a realised loss for options purchased.

The Company writes options on securities, futures and interest rate swaps ("swaptions"). These options are settled in cash and subject the Company to unlimited risk of loss. The Company, however, is not subject to credit risk on written options as the counterparty has already performed its obligation by paying the premium at the inception of the contract.

Listed options are priced via quoted prices from Refinitiv or Bloomberg. For In-The-Money and At-The-Money options where no quotes exist, a theoretical model using the under-lying prices and implied volatility curves is applied.

The valuation of OTC Options like FX Options is based on a theoretical model which uses FX spot, FX Option volatility data and interest rates as input.

The valuation of swaptions is based on a theoretical model using swaption volatility data and interest rates. The model takes the settlement conventions from ISDA into account.

The market value of the options is disclosed in the statement of net assets under "Options bought or written at market value". Change in unrealised appreciation/(depreciation) resulting there from are included in the statement of operations and changes in net assets respectively under the heading "Net realised gains/(losses) on options" and "Changes in unrealised gain/(loss) on options".

## m) Inflation swaps

An inflation swap is a bilateral agreement in which one party pays a fixed rate cash flow on the nominal amount while the other party pays a floating rate linked to an inflation index. The party paying the floating rate pays the inflation-adjusted rate multiplied by the nominal amount. These amounts are calculated and booked for every time the NAV is calculated.

The unrealised appreciation/(depreciation) is disclosed in the statement of net assets under "Unrealised gain/(loss) on swaps." Realised gains/(losses) and change in unrealised appreciation/(depreciation) resulting there from are included in the statement of operations and changes in net assets respectively under the heading "Net realised gains/(losses) on swaps" and "Changes in unrealised gain/(loss) on swaps."

## n) Definition of terms used in the Statement of Investments in Securities and Other Net Assets and in the Credit Default Swaps (CDS) tables

FRN (Floating Rate Note): Bond with a coupon indexed to a benchmark interest rate such as LIBOR or Euribor plus or minus a spread. Only the dates of changes are known from the date of issue.

MULTI: Bonds for which the interest rates may change from Fixed-to-float or Fixed-to-variable and where interest rates and dates of the changes are known from the date of issue.

VAR: Bond with an interest rate varying during its lifetime other than FRN or MULTI.

PERPETUAL: This term is used for bonds with no maturity date. The principal amount is never paid to the investor and instead he receives a steady stream of interest forever.

P-NOTE (Participatory note): Instruments issued by registered foreign institutional investors (Fil) to overseas investors, who wish to invest in the Indian stock markets without registering themselves with the market regulator, the Securities and Exchange Board of India - SEBI.

No ref obligation: Disclosed in the Credit Default Swaps tables, when no underlying reference bond is available in the official RED database from Markit.

## o) Combined statements

The Company's Combined Statement of Net Assets and the Combined Statement of Operations and Changes in Net Assets are the sum of the statements of each fund translated into EUR at the prevailing exchange rates as at end of the year. The difference between opening total net assets stated at exchange rates ruling at the beginning of the year and their value at the end of the year is shown as an exchange difference in caption "Revaluation difference on opening net assets" in the Combined Statement of Operations and Changes in Net Assets.

Cross investments (where one sub-fund has invested in another sub-fund of the Fund) and related inter-Fund accounts have not been eliminated for presentation purposes of the combined results. Cross investments represent 0.01% of the combined net assets of the Company as at 31 December 2023.

# Notes to the Financial Statements as of 31/12/2023 (continued)

## p) Provisions on Indian Capital Gain Tax

Capital gains realized on the disposal of Indian listed stocks within 12 months after purchase (short term gains) are subject to a capital gains tax. The disposal of Indian listed stocks after 12 months after purchase (long term gains) were exempt until April 2018. Starting April 2018, India also introduced a capital gains tax on long term gains. Until 9 December 2021, the capital gains taxes were taken into account on an arisen basis a few days after each trade at the applicable rates for a short term gain or a long term gain without taking a provision into account. Since 9 December 2021, the capital gains taxes for funds investing in India are accrued in the Net Asset Value.

The provision is disclosed in the caption "Net other receivable" or "Net other payable" in the Statement of Net Assets and in the caption "Changes in unrealised gain/(loss) on securities" in the Statement of Operations and Changes in net Assets".

Fund name	Base currency	Amount
Nordea 1 - Asia ex Japan Equity Fund	USD	190,201.13
Nordea 1 - Asian Stars Equity Fund	USD	703,725.95
Nordea 1 - Emerging Stars Equity Fund	USD	8,335,512.49
Nordea 1 - Emerging Stars ex China Equity Fund	USD	56,392.18
Nordea 1 - Emerging Wealth Equity Fund	EUR	101,028.34
Nordea 1 - Global Climate Engagement Fund (Note 1a)	USD	163,620.28
Nordea 1 - Global Social Empowerment Fund	USD	4,215.52
Nordea 1 - Indian Equity Fund	USD	6,732,567.89
Nordea 1 - Stable Emerging Markets Equity Fund	USD	0.01

## q) Last tradable Net Asset Value of the year

The annual report shows all Sub-funds with a tradable Net Asset Value dated 29 December 2023, except for the Nordea 1 - Latin American Equity Fund due to closed markets in Latin America on 29 December 2023. For this Sub-fund, a non-tradable Net Asset Value was calculated on 29 December 2023 for the purpose of these financial statements. This non-tradable Net Asset Value was based on the latest available market prices of the investments as at 29 December 2023.

## Note 3 - Charges taken from the Company over a year

The charges cover Sub-fund operating costs, including management, administration, taxe d'abonnement and distribution costs. These fees are accrued on a daily basis on the total assets in the relevant share classes and Sub-funds and deducted from Sub-fund assets quarterly, and therefore reduce the performance of your investment.

These fees are the same for all shareholders of a given Sub-fund and share class.

**a) Management fees:** These fees, payable out of the assets of the relevant Sub-funds, are due to the management company. Management fees for D and Z shares are set in the separate terms that apply to investors in these shares. Management fees for X shares are not taken from the Sub-fund but are paid by investors in this type of shares. Management fees for Y shares are zero.

**b) Operational expenses:** These expenses consist of an administration fee (for central administration), depositary fees (charges for safekeeping and other associated services), and the taxe d'abonnement.

The taxe d'abonnement (subscription tax) is calculated and payable quarterly, on the aggregate net asset value of the outstanding shares of the SICAV. It is paid out of the operational expenses at the following rates:

Classes C, E, F, N, P and Q : 0.05%

Classes D, I, V, X, Y and Z : 0.01%

The value of the assets represented by the units or shares held in other Luxembourg undertaking for collective investment is exempted from any subscription tax, provided that such units or shares have already been subject to the Luxembourg subscription tax.

Safekeeping and related administration charges are based on the value of assets held in custody and vary from Sub-fund to Sub-fund depending on the countries the Sub-funds are invested in.

Operational expenses further include:

- All expenses of the auditor and legal advice
- All expenses connected with publication and supply of information to shareholders, in particular the cost of printing, the distribution of financial reports as well as any prospectuses
- All expenses related to the maintenance, production, printing, translation, distribution, dispatch, storage and archiving of the Key Investor Information Documents (the "KIIDs")/ Key Information Document ("KID")
- Any advertising costs and expenses other than those specified above that the management company determines to be directly related to the offer or distribution of shares, and certain platform fees and expenses, as applicable.
- All expenses involved in registering and maintaining the registration of the SICAV with supervisory authorities and stock exchanges

# Notes to the Financial Statements as of 31/12/2023 (continued)

## Expenses not included in any of the above:

- all taxes payable on the assets and/or income except for the tax d'abonnement
- depositary transaction fees
- other transaction-related fees, such as ordinary brokerage fees and commissions, bank charges, stamp duties and similar levies
- litigation expenses
- any extraordinary expenses or other unforeseen charges
- all other expenses chargeable to the SICAV

The following tables disclose the management fees and operational expenses of share classes available to (i) institutional investors and (ii) all investors excluding institutional investors

Management fees and operational expenses of share classes available to institutional investors:

(\*) Effective rate charged to the share class at report date. "n/a" when no outstanding shares.

**c) Distribution fee:** This fee is paid to the management company and in principle forwarded to the local distributor or intermediary. The fee is charged only on E shares and is 0.75% a year.

**d) Performance fee:** The management company may receive a performance fee. The performance fee is deducted from the NAV and passed on to the investment manager for the respective Sub-fund.

For institutional share classes (except I share classes), the management company has the discretion to decide, prior to the first investment, to charge or not a performance fee and to determine the rate of performance fee that is applied to the share class.

In the case of X share classes, a performance fee may be directly invoiced by the management company to the investors per the separate charging structure agreed upon between each individual investor and the management company.

The investment manager may elect to forego its right to the performance fee. In such a case, the management company is not entitled to receive a performance fee from the respective Sub-fund.

Where applicable, performance fee is due if, at the end of the performance review period, the net asset value per share exceeds its respective high watermark and its accumulated hurdle rate since performance fee was last paid.

The performance of a share class is reviewed at the end of each calendar year. If a share class is created during a calendar year, the performance review period is from the date the share class was launched to the upcoming end of the calendar year.

The high watermark of a share is the greater of (i) the initial net asset value per share or, (ii) the highest net asset value price at the end of each calendar year. The performance reference period is equal to the whole life of the Sub-fund and cannot be reset.

# Notes to the Financial Statements as of 31/12/2023 (continued)

The applicable hurdle rates are set out in the table below. A floor of 0% is applied to the hurdle rate, i.e. as long as the interest rate used as hurdle rate for any share class is negative, the hurdle rate is considered to be 0%. This means that performance fee cannot be charged if the value of the shares falls or remain unchanged during a calendar year.

Sub-fund	Hurdle rate	Max fee % C, E, F, P, I and Q classes
Nordea 1 - Global Equity Market Neutral Fund	EURIBOR 1 Month	15%

The performance fee is calculated and accrued daily and paid yearly in arrears, in respect of each calendar year.

At the end of the calendar year for which performance fee is to be calculated, the performance fee for each share is equal to maximum 15% of the appreciation of the net asset value per share (net of performance fee) in excess of the high watermark from when performance fee was last paid, after deduction of the accumulated hurdle rate since performance fee was last paid. Any performance fee due will generally be paid within 30 business days after the end of each calendar year.

In case a Sub-fund is liquidated, merged or in case of net redemptions as observed on any valuation day, the pro rata of the year-to-date performance accrual that relates to such shares is considered as due regardless of the performance of the Sub-fund after such liquidation, merger or net redemption.

Past performance against the hurdle rate is disclosed, once available, in the applicable KIID / KID.

## Examples of how performance fee is calculated

Calendar year	NAV end of calendar year	Performance (net) end of calendar year	Hurdle rate	Accumulated hurdle rate since last performance fee	High watermark since last performance fee	Fee rate	Performance fee due
Year 1	105	5.00%	1.50%	1.50%	Exceeded with 5.00%*	15.00%	5.00% - 1.50% x 15.00% = 0.53%
Year 2	104	(0.95%)	1.00%	1.00%	Unchanged	15.00%	None
Year 3	103	(0.96%)	0%**	1.00%	Unchanged	15.00%	None
Year 4	106	2.91%	3.00%	4.03%	Exceeded with 0.95%	15.00%	None
Year 5	113	6.60%	1.00%	5.07%	Exceeded with 7.62%	15.00%	7.62% - 5.07% x 15.00% = 0.38%

\* The initial subscription price represents the first high watermark. In this case the initial subscription price is 100.

\*\* Hurdle rate is 0% if negative.

## Note 4 - Repurchase and reverse repurchase transactions

The Sub-fund below has opened repurchase and reverse repurchase transactions on 31/12/2023 which are disclosed under the Statement of Derivative Instruments.

The revenues/expenses arising from repurchase transactions are as follows:

Name of Sub-fund	Base Currency	Revenues/(Expenses)
Nordea 1 - European Covered Bond Opportunities Fund	EUR	(20,748,605.74)

Revenues/Expenses are netted in the Statement of Net Assets under "Dividends and interest receivable" and in the Statement of Operations and Changes in Net Assets under "Net interest on repurchase transactions".

The revenues/expenses arising from reverse repurchase transactions are as follows:

Name of Sub-fund	Base Currency	Revenues/(Expenses)
Nordea 1 - European Covered Bond Opportunities Fund	EUR	509,810.59

Revenues/Expenses are netted in the Statement of Net Assets under "Dividends and interest receivable" and in the Statement of Operations and Changes in Net Assets under "Net interest on reverse repurchase transactions".

# Notes to the Financial Statements as of 31/12/2023 (continued)

## Note 5 - Statement of changes in investments

A list specifying for each Sub-fund the total purchases and sales in the investments which occurred during the period under review, can be obtained, free of charge and as hardcopy, from the Registered Office of the Company, the Depositary and the Principal Distributor or any company listed in the section "Representatives & Paying & Information Agents outside Luxembourg".

## Note 6 - Total Expense Ratio (TER)

This ratio expresses the sum of all costs and commissions charged on an ongoing basis to the Sub-fund's net assets (operating expenses as shown under "Expenses" in the Statement of Operations and Changes in Net Assets but excluding the caption "Transaction related costs") taken retrospectively as a percentage of the average Sub-fund's net assets. The transaction fees incurred on the purchase and sale of investments are not included in the ratio. The TER is calculated in accordance with the Asset Management Association Switzerland (AMAS) guidelines dated 20 April 2015 and is in principle calculated using the following formula:

$$\text{TER \%} = \frac{\text{Total operating expenses in CU*}}{\text{Average Sub-fund's net assets in CU*}} \times 100$$

\*CU = Currency units in the Sub-fund's accounting currency

The TER is calculated for the preceding 12 months as of the end of the financial year.

In the case of newly launched Sub-funds, the operating expenses are annualized.

## Note 7 - Changes to the Prospectus of the Company during the reporting year

The latest prospectus of the Fund is the August 2023 Prospectus.

Latest versions of the KIIDs/KIDs for each of the Company's funds' share classes may be found on nordea.lu.

The current Prospectus and KIIDs/KIDs for the share classes of the Company's funds can also be obtained free of charge and as hard copy, from the registered office of the Company and of the Management Company.

Any material changes to the Prospectus will be communicated by a notice to be sent at the address on the shareholders register, either physically, electronically, or as an e-mailed link, subject to investor consent (where required), and on nordea.lu. Notices to shareholders will also be available at the registered office of the management Company and the Fund's Representatives outside of Luxembourg.

## Note 8 - Country and Economic sector classification of the portfolio (unaudited)

The economic sector classification of the portfolio is shown in accordance with the GICS Direct classifications (a joint product of MSCI and Standard & Poor's).

## Note 9 - Share capital and share classes

Please refer to the sections "the SICAV" and "Share Classes" of the Company's prospectus for further information on the share capital and share classes of the Company respectively.

## Note 10 - Swing factor

On business days when net dealing in Sub-fund shares exceeds a certain threshold, a Sub-fund's NAV may be adjusted by a swing factor. This adjustment reflects an assessment of the overall costs (estimated tax charges and trading costs that may be incurred by the fund and the estimated bid/offer spread of the assets in which the Sub-fund invests) incurred in buying or selling investments to satisfy, respectively, net subscriptions or net redemptions of shares (understanding that a Sub-fund generally maintains adequate daily liquidity to handle ordinary cash flows with little or no impact on ordinary investment operations). The NAV price will be adjusted upwards when net dealing in Sub-fund shares is positive (net subscription), and will be adjusted downwards when net dealing in Sub-fund shares is negative (net redemption).

Swing pricing is intended to reduce the impact of these costs on shareholders who are not dealing their shares at that time, and is impacting the shareholders who are dealing their shares by adjusting their NAV price by the swing factor. To the extent that markets have different charging structures on the buy and sell side, the swing factor may not be equal for net subscriptions or net redemptions.

The Board of Directors also delegated to the Management Company the decision-making regarding the correct application and level of swinging single pricing methodology. Although all Sub-funds may be subject to swing pricing, thresholds and swing factors, as fixed by the Management Company can vary by Sub-fund. Under normal market conditions, the adjustment swing factor will not be larger than 2.00% of what the NAV would otherwise be for all share classes within a Sub-fund.

# Notes to the Financial Statements as of 31/12/2023 (continued)

During the year, the swing pricing mechanism was applied on the following Sub-funds:

Nordea 1 - Asia ex Japan Equity Fund	Nordea 1 - European Small and Mid Cap Stars Equity Fund	Nordea 1 - Global Value ESG Fund
Nordea 1 - Asian Stars Equity Fund	Nordea 1 - European Stars Equity Fund	Nordea 1 - Green Bond Fund (Note 1b)

Nordea 1 - European High Yield Credit Fund	Nordea 1 - Global Stars Equity Fund	
Nordea 1 - European High Yield Stars Bond Fund	Nordea 1 - Global Sustainable Listed Real Assets Fund	

A swing amount has been booked in the following Sub-fund at reporting date:

Nordea 1 - Flexible Credit Fund

## Note 11 - Transaction fees

The transaction fees are in principle the sum of broker expenses and of bank commissions.

The transaction related costs, as disclosed in the table below and in the Statement of Operations and Changes in Net Assets, include the bank commissions and the broker fees on derivatives.

The broker costs, as disclosed in the table below, are the expenses and stock exchange taxes (where applicable) billed by the broker directly and paid to him in settlement of shares, bonds and options. They are registered as integral part of the cost price at the same time as the transaction itself.

Name of Sub-fund	Currency	Broker costs in Sub-fund base currency	Transaction related costs in Sub-fund base currency

(\*) The monthly distribution rates as disclosed apply on the total net assets of the M-Share Classes of the last business day of the previous month.

# Notes to the Financial Statements as of 31/12/2023 (continued)

## Note 13 - Performance calculation

The performance is calculated in accordance with the Swiss Funds & Asset Management Association guidelines dated May 16, 2008 and is calculated using the following general formula:

$$\text{Performance \%} = \left\{ \frac{\text{NAV}_{\text{End P}} \times f_1 \times f_2 \dots f_n}{\text{NAV}_{\text{Start P}}} - 1 \right\} \times 100$$

NAV<sub>End P</sub> Net asset value per unit at end of observation period

NAV<sub>Start P</sub> Net asset value per unit at start of observation period (i.e. the last figure for the preceding observation period)

f<sub>1</sub>, f<sub>2</sub>...f<sub>n</sub> Adjustment factors for distributions, where:

$$f = \frac{\text{NAV}_{\text{ex}} + \text{gross distribution}}{\text{NAV}_{\text{ex}}}$$

NAV<sub>ex</sub> Net asset value per unit ex dividend

Gross distribution Gross amount of income and capital gains distributed per unit to investors

## Note 14 - Sustainable Finance Disclosure Regulation

Information on environmental and/or social characteristics and/or sustainable investments is available in the relevant annexes under the Sustainable Finance Disclosure Regulation section.

## Note 15 - Significant events

On 19 March 2023 the Swiss authorities orchestrated a merger between UBS and Credit Suisse and instructed Credit Suisse to write down its AT1 bonds to zero to which the following funds were exposed:

Name of Sub-fund	Nominal exposure in USD
Nordea 1 - European Financial Debt Fund	58,481,000
Nordea 1 - European High Yield Bond Fund	81,435,000
Nordea 1 - European High Yield Credit Fund	2,791,000
Nordea 1 - Flexible Credit Fund	825,000
Nordea 1 - International High Yield Bond Fund USD hedged	200,000
Nordea 1 - North American High Yield Bond Fund	1,614,000

## Note 16 - Subsequent events

### a) Prospectus update:

A prospectus dated February 2024 was issued, including 6 new sub-funds:

Nordea 1 - Diversified Growth Fund  
 Nordea 1 - Emerging Markets Sustainable Labelled Bond Fund  
 Nordea 1 - European Corporate Sustainable Labelled Bond Fund  
 Nordea 1 - European Sustainable Labelled Bond Fund  
 Nordea 1 - Fixed Maturity Bond 2027 Fund  
 Nordea 1 - Global High Income Bond Fund

A prospectus dated April 2024 will be issued, effective 3 April 2024.

### b) Merger:

Nordea 1 - Emerging Wealth Equity Fund merged into Nordea 1 - Emerging Stars ex China Equity Fund with effect on 30 January 2024.

### c) Liquidations:

The Board of Directors has taken the decision to liquidate the below Sub-funds:

Sub-fund name	Liquidation date	Last NAV date
Nordea 1 - Global Equity Market Neutral Fund	13/03/2024	19/03/2024
Nordea 1 - Chinese Bond Fund	14/03/2024	20/03/2024
Nordea 1 - Emerging Markets Debt Total Return Fund	03/04/2024	11/04/2024
Nordea 1 - Emerging Stars Corporate Bond Fund	03/04/2024	11/04/2024
Nordea 1 - Social Bond Fund	08/04/2024	15/04/2024

# Shareholder's Information

The following documents may be obtained free of charge and as hard copy at the registered office of the Company, the Management Company, or the Representatives and Paying Agents during their respective business days:

- the Articles of the Company;
- the Prospectus of the Company;
- the KIID/KID;
- the Application Form;
- the periodical financial reports;
- the marketing documents made available from time to time; and
- Information on our core policies (conflicts of interest, remuneration, engagement, complaints handling, etc.).

An up-to-date version of the KIIDs/KIDs will be made available on [nordea.lu](http://nordea.lu), and, depending on the local language(s) of the countries where the Company, a Sub-fund or a Share Class are registered for public offering, on the local Nordea websites ending with the international country codes of such relevant countries, as available.

The following documents may be consulted at the registered office of the Company or the Management Company during their respective business days:

- the Management Company Agreement between the Company and Nordea Investment Funds S.A.;
- the Depositary and Custodian Agreement between the Company, the Management Company and J.P. Morgan SE, Luxembourg Branch.

Notices for all general meetings of the Shareholders are mailed to holders of registered shares of the Company.

Subscriptions can only be received on the basis of the current Prospectus accompanied by the latest Annual Report as well as by the latest Semi-Annual Report if published after the latest Annual Report.

## Risk Transparency disclosures (unaudited)

### A) General

The Management Company uses a risk management process that allows monitoring the risk of the portfolio positions and their share of the overall risk profile of the portfolios on the Sub-funds at any time.

In accordance with the Law of 17 December 2010 and the applicable regulatory requirements of the Commission de Surveillance du Secteur Financier ("CSSF") the Management Company reports to the CSSF on a regular basis on the risk management process. The Management Company assures, on the basis of appropriate and reasonable methods, that the overall risk, associated with derivatives, does not exceed the net asset value of the portfolio. The Management Company uses the following methods:

- **The Commitment approach:** the positions on derivative financial instruments are converted into equivalent positions in the underlying assets, after consideration of all netting and coverage effects.
- **The Value-at-Risk (VaR) approach:** The VaR is a mathematical-statistical concept and is used as a standard measure of risk in the financial sector. The VaR represents the potential loss of a portfolio over a given period (so-called holding period) for a certain probability (so-called confidence level). The VaR is measured at the whole Sub-fund level, on a holding period not exceeding one month (20 business days) and a confidence level not below 95%.
  - **Relative VaR approach:** The relative VaR concept determines the VaR based on a reference portfolio. The relative VaR cannot exceed the VaR of a reference portfolio by more than 100%, i.e. two times the reference VaR (200%). The reference portfolio is a matching portfolio in comparison to the Sub-fund's investment policy.
  - **Absolute VaR approach:** In the absolute VaR approach the VaR (min. 95% confidence level, max. 20-day holding period) of the Sub-fund cannot exceed 20% of the Sub-fund net assets (99% confidence level, 20-day holding period). The maximum limit of 20% is adjusted accordingly, when different holding periods or confidence levels are applied. Information of the applicable maximum limit is provided.

#### VaR add ons:

For Sub-funds measuring and monitoring the global risk on derivatives via VaR approach, the Management Company also determines the sum of the nominal values or equivalent values of all the relevant derivatives and estimates in this regard a degree of the expected average value (leverage). This level of leverage can, depending on the respective market conditions, derive from the actual value at the reporting date. Furthermore, the published expected level of leverage is explicitly not understood as an investment limit.

# Risk Transparency disclosures (unaudited) (continued)

The Board of Directors decides on the implementation of the adequate methodology to calculate the global exposure for each of the Sub-funds within Nordea 1, SICAV. This methodology may vary from one Sub-fund to another. A majority of Sub-funds within Nordea 1, SICAV apply Commitment approach for measuring the global exposure. Sub-funds which apply VaR approach are listed in the table below, indicating the calculation concept chosen:

Sub-fund	Methodology
Nordea 1 - Alpha 7 MA Fund	Absolute VaR
Nordea 1 - Alpha 10 MA Fund	Absolute VaR
Nordea 1 - Alpha 15 MA Fund	Absolute VaR
Nordea 1 - Balanced Income Fund	Absolute VaR
Nordea 1 - Conservative Fixed Income Fund	Absolute VaR
Nordea 1 - Emerging Markets Debt Total Return Fund	Absolute VaR
Nordea 1 - Emerging Stars Bond Fund	Relative VaR
Nordea 1 - Emerging Stars Local Bond Fund	Relative VaR
Nordea 1 - European Covered Bond Opportunities Fund	Absolute VaR
Nordea 1 - European Financial Debt Fund	Absolute VaR
Nordea 1 - Flexible Credit Fund	Absolute VaR
Nordea 1 - Flexible Fixed Income Fund	Absolute VaR
Nordea 1 - Flexible Fixed Income Plus Fund	Absolute VaR
Nordea 1 - Global Equity Market Neutral Fund	Absolute VaR
Nordea 1 - Norwegian Bond Fund	Relative VaR
Nordea 1 - Stable Return Fund	Absolute VaR

## B) Global risk measurement methods

### Ad 1) Absolute VaR approach

In the period from 01/01/2023 to 31/12/2023 (the "Period"), the absolute VaR has been used for monitoring and measuring the global risk associated with the derivatives used by the Sub-funds. The following table indicates:

- (i) The minimum level, the maximum level and the average level of daily VaR observed during the Period.
- (ii) The VaR regulatory limit for each of these Sub-funds.

Sub-fund	Minimum	Maximum	Average	Regulatory limit
Nordea 1 - Alpha 7 MA Fund	2.6%	4.9%	3.5%	20%
Nordea 1 - Alpha 10 MA Fund	3.6%	6.8%	5.0%	20%
Nordea 1 - Alpha 15 MA Fund	5.4%	10.3%	7.4%	20%
Nordea 1 - Balanced Income Fund	2.7%	5.6%	3.8%	20%
Nordea 1 - Conservative Fixed Income Fund	0.7%	1.9%	1.1%	20%
Nordea 1 - Emerging Markets Debt Total Return Fund	3.7%	7.3%	5.2%	20%
Nordea 1 - European Covered Bond Opportunities Fund	1.4%	6.7%	3.0%	20%
Nordea 1 - European Financial Debt Fund	1.6%	9.6%	3.2%	20%
Nordea 1 - Flexible Credit Fund	1.5%	6.1%	2.4%	20%
Nordea 1 - Flexible Fixed Income Fund	1.7%	4.0%	2.6%	20%
Nordea 1 - Flexible Fixed Income Plus Fund	3.5%	8.0%	5.2%	20%
Nordea 1 - Global Equity Market Neutral Fund	2.7%	5.5%	3.7%	20%
Nordea 1 - Stable Return Fund	3.5%	6.6%	4.5%	20%

# Risk Transparency disclosures (unaudited) (continued)

The sum of the nominal values or equivalent values of all relevant derivatives (leverage) in the period from 01/01/2023 to 31/12/2023 lead to the following average level of leverage for 2023:

Sub-fund	Minimum (in % of NAV)*	Maximum (in % of NAV)*	Average (in % of NAV)*
Nordea 1 - Alpha 7 MA Fund	320%	477%	382%
Nordea 1 - Alpha 10 MA Fund	440%	645%	534%
Nordea 1 - Alpha 15 MA Fund	674%	992%	801%
Nordea 1 - Balanced Income Fund	328%	501%	416%
Nordea 1 - Conservative Fixed Income Fund	160%	255%	188%
Nordea 1 - Emerging Markets Debt Total Return Fund	99%	327%	162%
Nordea 1 - European Covered Bond Opportunities Fund	596%	1813%	1125%
Nordea 1 - European Financial Debt Fund	82%	108%	95%
Nordea 1 - Flexible Credit Fund	35%	226%	78%
Nordea 1 - Flexible Fixed Income Fund	254%	404%	298%
Nordea 1 - Flexible Fixed Income Plus Fund	445%	771%	536%
Nordea 1 - Global Equity Market Neutral Fund	189%	279%	231%
Nordea 1 - Stable Return Fund	252%	324%	282%

\* Calculated at least with bi-weekly data.

## Ad 2) Relative VaR approach

In the period from 01/01/2023 to 31/12/2023 (the "Period"), the relative VaR has been used for monitoring and measuring the global risk associated with the derivatives used by the Sub-funds. The following table indicates:

- (i) The corresponding reference portfolio of each of these Sub-funds.
- (ii) The minimum level, the maximum level and the average level of daily VaR observed during the Period.
- (iii) The VaR regulatory limit for each of these Sub-funds.

Sub-fund	Reference portfolio	Minimum	Maximum	Average	Regulatory limit
Nordea 1 - Emerging Stars Bond Fund	JP Morgan EM Bond Index Global Diversified	88%	119%	101%	200%
Nordea 1 - Emerging Stars Local Bond Fund	JP Morgan GBI-EM Global Diversified	43%	112%	102%	200%
Nordea 1 - Norwegian Bond Fund	Norway Govt All Index	93%	124%	106%	200%

The sum of the nominal values or equivalent values of all relevant derivatives (leverage) in the period from 01/01/2023 to 31/12/2023 lead to the following observed levels of leverage for 2023:

Sub-fund	Minimum (in % of NAV)*	Maximum (in % of NAV)*	Average (in % of NAV)*
Nordea 1 - Emerging Stars Bond Fund	29%	68%	39%
Nordea 1 - Emerging Stars Local Bond Fund	27%	107%	59%
Nordea 1 - Norwegian Bond Fund	84%	146%	106%

\* Calculated at least with bi-weekly data.

## Ad 3) Commitment Approach

In relation with the remaining Sub-funds that are not reported in Ad 1) and Ad 2) above, the global risk on derivatives has been determined according to the commitment approach during the reporting period from 01/01/2023 to 31/12/2023.

# Remuneration disclosures (unaudited)

## A) General

The Management Company has implemented a Remuneration Policy, based on that of Nordea Group, that is consistent with, and promotes, sound and effective risk management and does not encourage risk taking that is inconsistent with the risk profile of the funds. The Management Company has committed to ensuring that all individuals subject to the Policy — which includes the Management Company's directors, managers and employees — will comply with the Policy.

The Remuneration Policy integrates governance, a pay structure that is balanced between fixed and variable components, and risk and long-term performance alignment rules. These alignment rules are designed to be consistent with the interests of the Management Company, the fund and the shareholders, with respect to such considerations as business strategy, objectives, values and interests, and include measures to avoid conflicts of interest. The Management Company ensures that the calculation of any variable remuneration is based on the applicable multi-year performance of the relevant fund and that the actual payment of such remuneration is spread over the same period. Employees in control functions do not receive variable remuneration.

Performance is assessed both, on the level of Nordea Group and at Management Company level. Individual staff assessments are based on a weighting of financial and non-financial targets linked to the specific job scope and role. As such, the principle of individual performance assessment is based on an assessment of objectives reached as well as an appreciation of the employee's long-term value creation. Furthermore, the performance reflects an assessment of business and interpersonal skills and is linked to the achievement of the individual. The criteria applied to establish fixed remuneration are job complexity, level of responsibility, professional experience and local market conditions.

The Policy is formulated by a remuneration committee and approved by the Board of Directors of the Management Company. The Policy follows a defined process establishing the principles, the approval, communication, implementation, review and update of the Policy which involves the Board of Directors, as well as Senior Management, Human Resources, Internal Audit and other control functions.

## B) Methodology

Considering the functional setup of the Management Company in the context of its role as UCITs and AIFs management company, the below information represents a proportion of the total staff remuneration within the Management Company as attributable to all the funds under management, taking into account non-UCITs and UCITs alike, in relation to the total net assets of the Company, and including delegates of entities to which the Management Company has delegated portfolio management functions (the "Delegates"). Under the methodology the average number of staff considered amounted to 338 including Senior Management.

Remuneration reporting as at 31 December 2023:

Fund	Total Remuneration (EUR) including any Delegates		Senior Management (EUR)
	Fixed	Variable	
Nordea 1, SICAV	27,173,722	8,979,125	991,357

# Disclosures under the Securities Financing Transaction Regulation (unaudited)

Based on the analysis conducted by the Management Company, the scope of these disclosures covers the transactions in total return swaps, equity swaps, repurchase and reverse repurchase transactions.

## Global data

The table below shows the amount of assets engaged in equity swaps, total return swaps, repurchase and reverse repurchase transactions, expressed as an absolute amount (in the base currency of each Sub-fund) and as a proportion of the Total Net Assets:

Fund name	Nordea 1 - Alpha 7 MA Fund (in EUR)	Nordea 1 - Alpha 10 MA Fund (in EUR)	Nordea 1 - Alpha 15 MA Fund (in EUR)	Nordea 1 - European Covered Bond Opportunities Fund (in EUR)	Nordea 1 - Global Equity Market Neutral Fund (in EUR)
<b>Market value of equity swaps*</b>	45,604,447.63	2,220,752,549.13	4,594,787,503.43	-	56,817,391.30
% of total net assets	9.73%	58.06%	125.64%	-	149.69%
<b>Market value of total return swaps*</b>	-	1,880,716,075.35	3,096,610,377.05	-	-
% of total net assets	-	49.17%	84.67%	-	-
<b>Market value of repurchase transactions**</b>	-	-	-	407,040,781.08	-
% of total net assets	-	-	-	97.60%	-
<b>Market value of reverse repurchase transactions**</b>	-	-	-	15,086,485.44	-
% of total net assets	-	-	-	3.62%	-
<b>Market value of securities financing transactions</b>	45,604,447.63	4,101,468,624.48	7,691,397,880.48	422,127,266.52	56,817,391.30
% of total net assets	9.73%	107.23%	210.32%	101.22%	149.69%

(\*) The market value is the sum of the absolute values of the sum of the absolute values of the "Commitment in Sub-fund base currency" as disclosed in the Statement of Derivative instruments.

(\*\*) The market value represents the "Commitment in Sub-fund base currency" as disclosed in the Statement of Derivative instruments and the value of captions "Payable under repurchase agreements (Note 2)" or "Receivable under reverse repurchase agreements (Note 2)" as disclosed in the Statement of Net Assets.

## Concentration data

Barclays Bank Ireland PLC and BofA Securities Europe SA. are the two counterparties for equity swaps and total return swaps. Cash and non-cash collateral have been exchanged with these two counterparties. The securities received as collateral are investment grade bonds issued or guaranteed by a member state of the OECD.

The table below shows the collateral issuers for non-cash collateral received, sorted as per the securities collateral values:

Fund name	Fund currency	Issuer name	Total
Nordea 1 - Alpha 10 MA Fund	EUR	United States of America	21,762,055.54
		Federal Republic of Germany	3,989,650.26
		French Republic	654,276.24
		Japan	126,429.94
		Kingdom of the Netherlands	1,210.30
		Republic of Finland	1,019.73
			<b>26,534,642.00</b>
Nordea 1 - Alpha 15 MA Fund	EUR	French Republic	135,818,439.59
		Federal Republic of Germany	9,585,537.65
		United States of America	7,197,228.29
		Republic of Finland	4,118,990.73
		Kingdom of the Netherlands	3,186,513.80
			<b>159,906,710.06</b>

Repurchase and reverse repurchase transactions are dealt with four counterparties and in principle, cash collateral has been exchanged:

- BNP Paribas SA;
- BofA Securities Europe SA;
- Credit Agricole Corporate & Investment Bank SA;
- Deutsche Bank AG.

# Disclosures under the Securities Financing Transaction Regulation (unaudited) (continued)

## Aggregate transaction data for each type of SFT and total return swaps

Cash collateral has been paid for equity swaps and total return swaps.

Cash received for repurchase transactions in exchange of the sale of the securities is managed as a whole, without being isolated from other cash.

All trades are settled and cleared bilaterally.

The table hereafter discloses the market value and collateral of equity swaps, total return swaps and repurchase transactions, broken down by counterparty and maturity:

Sub-fund Base currency Counterparty name (country) Instrument type Time to maturity	Market value* in base currency	Cash collateral received/(paid) from/(to) the counterparty** in base currency	Non-cash collateral received/(paid) from/(to) the counterparty** in base currency

(\*) For "Equity swaps" and "total return swaps", the market value is the "Unrealised appreciation/(depreciation) in Sub-fund base currency" as shown in the corresponding table in the Statement of Derivative Instruments.

For "Repurchase transactions", the market value represents the "Commitment in Sub-fund base currency" as disclosed in the Statement of Derivative Instruments and the value of caption "Payable under repurchase agreements (Note 2)" as disclosed in the Statement of Net Assets.

For "Reverse repurchase transactions", the market value represents the "Commitment in Sub-fund base currency" as disclosed in the Statement of Derivative Instruments and the value of caption "Receivable under reverse repurchase agreements (Note 2)" as disclosed in the Statement of Net Assets.

(\*\*) Collateral is netted at counterparty level thus it may relate to many instruments types.

The table below shows the type and quality of non-cash collateral received for equity swaps and total return swaps:

Fund name	Fund Currency	Asset Type	Total amount	Credit rating			
				Investment Grade (Moody's long term rating)			
				Aaa	Aa1	Aa2	A1
Nordea 1 - Alpha 10 MA Fund	EUR	Government bonds	26,534,642.00	25,752,916.09	1,019.73	654,276.24	126,429.94
Nordea 1 - Alpha 15 MA Fund	EUR	Government bonds	159,906,710.06	19,969,279.74	4,118,990.73	135,818,439.59	

## Data on reuse of collateral

Cash collateral on equity swaps or total return swaps is either placed on deposit or invested in high-quality government bonds, repurchase transactions or short term money market funds that calculate a daily net asset value and are rated AAA or equivalent.

Non-cash collateral is not sold, reinvested or pledged.

## Safekeeping of collateral received by the collective investment undertaking as part of SFTs and total return swaps

All cash collateral received is held on pooled accounts but segregated from J.P. Morgan's assets.

# Disclosures under the Securities Financing Transaction Regulation (unaudited) (continued)

## **Safekeeping of collateral granted by the collective investment undertaking as part of SFTs and total return swaps**

The collateral granted by the Sub-funds is kept on pooled accounts with counterparty Barclays Bank Ireland PLC and on segregated accounts with counterparty BofA Securities Europe SA.

## **Data on return and cost for each type of SFTs and total return swaps**

All the return of the equity swaps and total return swaps is attributed to the Sub-funds. The transaction costs are not separately identifiable.

The revenues generated by the reinvestment of the cash received for the repurchase transactions are kept by the Sub-fund.

# Disclosures under the Sustainable Finance Disclosure Regulation (unaudited)

Commission Delegated Regulation (EU) 2023/363 of 31 October 2022 amended and corrected the regulatory technical standards laid down in Delegated Regulation (EU) 2022/1288 as regards the content and presentation of information in relation to disclosures in pre-contractual documents and periodic reports for financial products investing in environmentally sustainable economic activities (amended SFDR RTS). The amended SFDR RTS introduce precontractual and periodic transparency requirements in relation to Taxonomy aligned fossil gas and nuclear energy related activities for financial products disclosing under Articles 8 and 9 of SFDR.

## Article 6 Sub-funds

The investments underlying these financial products do not take into account the EU criteria for environmentally sustainable economic activities.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Asia ex Japan Equity Fund

**Legal entity identifier:** 549300H93PG75WKUHX51

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 62 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	22 tCO <sub>2</sub> e / m€ invested	97.29 %	97.29 %
	Carbon footprint Scope 1+2+3	256 tCO <sub>2</sub> e / m€ invested	97.29 %	97.29 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.92 % involved in violations	97.29 %	97.29 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	22 tCO <sub>2</sub> e / m€ invested	97.29 %	97.29 %
		2022	21 tCO <sub>2</sub> e / m€ invested	97.48 %	96.36 %
	Carbon footprint Scope 1+2+3	2023	256 tCO <sub>2</sub> e / m€ invested	97.29 %	97.29 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.92 % involved in violations	97.29 %	97.29 %
		2022	0.00 % involved in violations	97.48 %	96.72 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	486 tCO <sub>2</sub> e	97.29 %	97.29 %
		Scope 2 GHG emissions	1,000 tCO <sub>2</sub> e	97.29 %	97.29 %
		Scope 3 GHG emissions	15,549 tCO <sub>2</sub> e	97.29 %	97.29 %
		Total GHG emissions Scope 1+2	1,486 tCO <sub>2</sub> e	97.29 %	97.29 %
		Total GHG emissions Scope 1+2+3	17,034 tCO <sub>2</sub> e	97.29 %	97.29 %
	Carbon footprint	Carbon footprint	22 tCO <sub>2</sub> e / m€ invested	97.29 %	97.29 %
		Carbon footprint Scope 1+2+3	256 tCO <sub>2</sub> e / m€ invested	97.29 %	97.29 %
	GHG intensity of investee companies	GHG intensity of investee companies	68 tCO <sub>2</sub> e / m€ of owned revenue	97.29 %	97.29 %
		GHG intensity of investee companies Scope 1+2+3	806 tCO <sub>2</sub> e / m€ of owned revenue	97.29 %	97.29 %
	Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	0.00 % investments in fossil fuels	97.29 %	97.01 %
	Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources	87.21 % non-renewable energy consumption	97.29 %	61.61 %
			0.00 % non-renewable energy production	97.29 %	0.00 %

## CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	Energy consumption intensity per high impact climate sector	Agriculture forestry and fishing (A)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Mining and quarrying (B)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Manufacturing (C)	0.26 GWh / m€ of revenue	50.92 %	49.19 %
		Electricity gas steam and air conditioning supply (D)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Water supply sewerage waste management and remediation activities (E)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Construction (F)	0.05 GWh / m€ of revenue	0.52 %	0.52 %
		Wholesale and retail trade repair of motor vehicles and motorcycles (G)	0.11 GWh / m€ of revenue	6.07 %	6.04 %
		Transportation and storage (H)	0.19 GWh / m€ of revenue	0.62 %	0.23 %
		Real estate activities (L)	0.57 GWh / m€ of revenue	1.74 %	1.74 %
		Biodiversity	Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas	0.00 % with negative impact
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.00 tons / m€ invested	97.29 %	15.87 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.41 tons / m€ invested	97.29 %	83.56 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.92 % involved in violations	97.29 %	97.29 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	1.39 % without policies	97.29 %	80.78 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	9.35 % pay gap	97.29 %	14.02 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	18.73 % (female directors / total directors)	97.29 %	94.31 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	97.29 %	96.79 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
1 January 2023 -  
31 December 2023

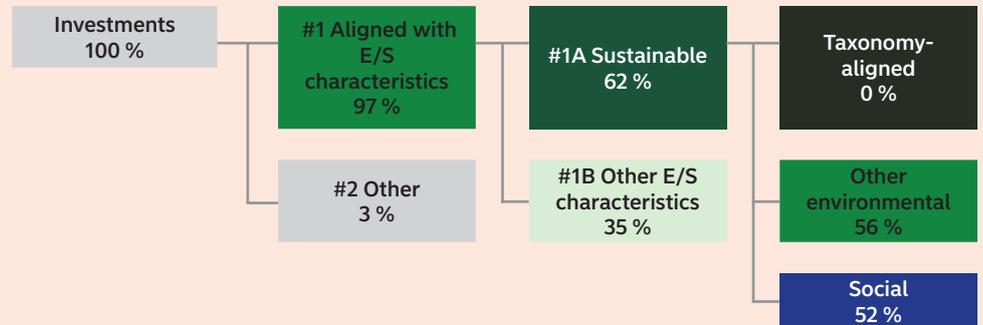

Largest investments	Sector	Assets	Country
Taiwan Semiconductor Manufacturing	Technology	6.30 %	Taiwan, Province of China
Samsung Electronics	Technology	5.21 %	Republic Of Korea
Alibaba Group Holding	Communications	4.31 %	China
AIA Group	Financial	3.45 %	Hong Kong
Baidu	Communications	3.00 %	China
Trip.com Group	Communications	2.94 %	China
Samsonite International	Consumer, Cyclical	2.66 %	United States
Tencent Holdings	Communications	2.62 %	China
ICICI Bank	Financial	2.44 %	India
Hong Kong Exchanges & Clearing	Financial	2.37 %	Hong Kong
LG Chem	Basic Materials	2.35 %	Republic Of Korea
NARI Technology	Industrial	2.26 %	China
Contemporary Amperex Technology	Consumer, Cyclical	2.07 %	China
Zhejiang Sanhua Intelligent Controls	Industrial	1.81 %	China
BOC Hong Kong Holdings	Financial	1.80 %	Hong Kong

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	21.83 %
Technology	17.99 %
Industrial	14.55 %
Consumer, Non-cyclical	14.02 %
Communications	13.17 %
Consumer, Cyclical	12.00 %
Basic Materials	3.12 %
Cash	2.71 %
Energy	0.60 %
<b>Sum</b>	<b>100.00 %</b>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

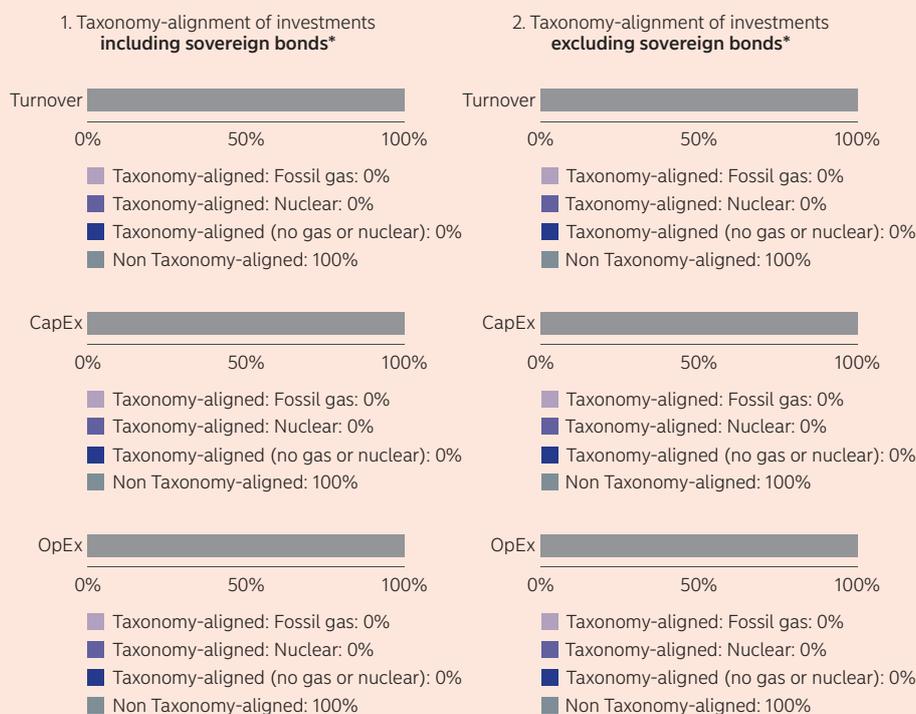

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:  
 In fossil gas       In nuclear energy  
 No

**The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 56 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 52 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Asian Stars Equity Fund

**Legal entity identifier:** 5493002RWJY1XFZG8U38

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 71 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	18 tCO <sub>2</sub> e / m€ invested	96.21 %	95.63 %
	Carbon footprint Scope 1+2+3	153 tCO <sub>2</sub> e / m€ invested	96.21 %	95.63 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.47 % involved in violations	96.21 %	95.64 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	18 tCO <sub>2</sub> e / m€ invested	96.21 %	95.63 %
		2022	17 tCO <sub>2</sub> e / m€ invested	96.91 %	96.71 %
	Carbon footprint Scope 1+2+3	2023	153 tCO <sub>2</sub> e / m€ invested	96.21 %	95.63 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.47 % involved in violations	96.21 %	95.64 %
		2022	0.00 % involved in violations	96.91 %	96.78 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	866 tCO <sub>2</sub> e	96.21 %	95.63 %
		Scope 2 GHG emissions	2,475 tCO <sub>2</sub> e	96.21 %	95.63 %
		Scope 3 GHG emissions	25,377 tCO <sub>2</sub> e	96.21 %	95.63 %
		Total GHG emissions Scope 1+2	3,342 tCO <sub>2</sub> e	96.21 %	95.63 %

		Biodiversity	Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas	0.00 % with negative impact
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.00 tons / m€ invested	96.21 %	14.83 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.71 tons / m€ invested	96.21 %	79.33 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.47 % involved in violations	96.21 %	95.64 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.30 % without policies	96.21 %	79.65 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	3.95 % pay gap	96.21 %	16.16 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	19.26 % (female directors / total directors)	96.21 %	93.08 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	96.21 %	95.86 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

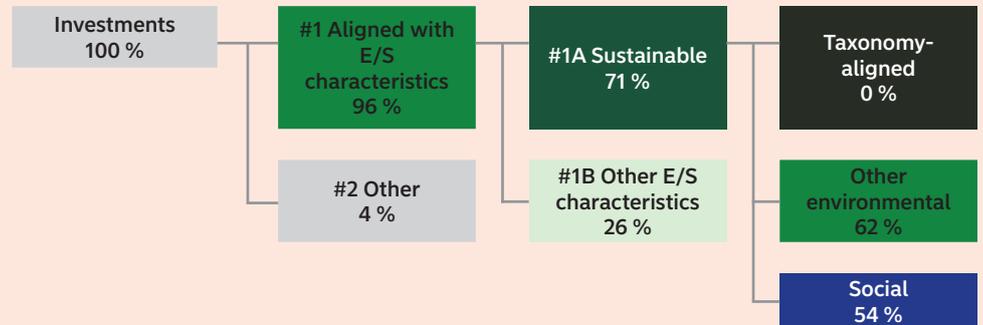

Largest investments	Sector	Assets	Country
Taiwan Semiconductor Manufacturing	Technology	9.66 %	Taiwan, Province of China
Samsung Electronics	Technology	9.60 %	Republic Of Korea
Tencent Holdings	Communications	7.24 %	China
Alibaba Group Holding	Communications	5.53 %	China
AlA Group	Financial	5.42 %	Hong Kong
Bank Rakyat Indonesia Persero	Financial	3.69 %	Indonesia
ICICI Bank	Financial	3.60 %	India
HDFC Bank	Financial	3.56 %	India

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Technology	25.43 %
Financial	25.32 %
Communications	20.97 %
Industrial	9.85 %
Consumer, Non-cyclical	5.94 %
Consumer, Cyclical	5.55 %
Cash	3.79 %
Energy	2.88 %
Basic Materials	0.26 %
<b>Sum</b>	<b>100.00 %</b>

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:  
 In fossil gas       In nuclear energy  
 No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

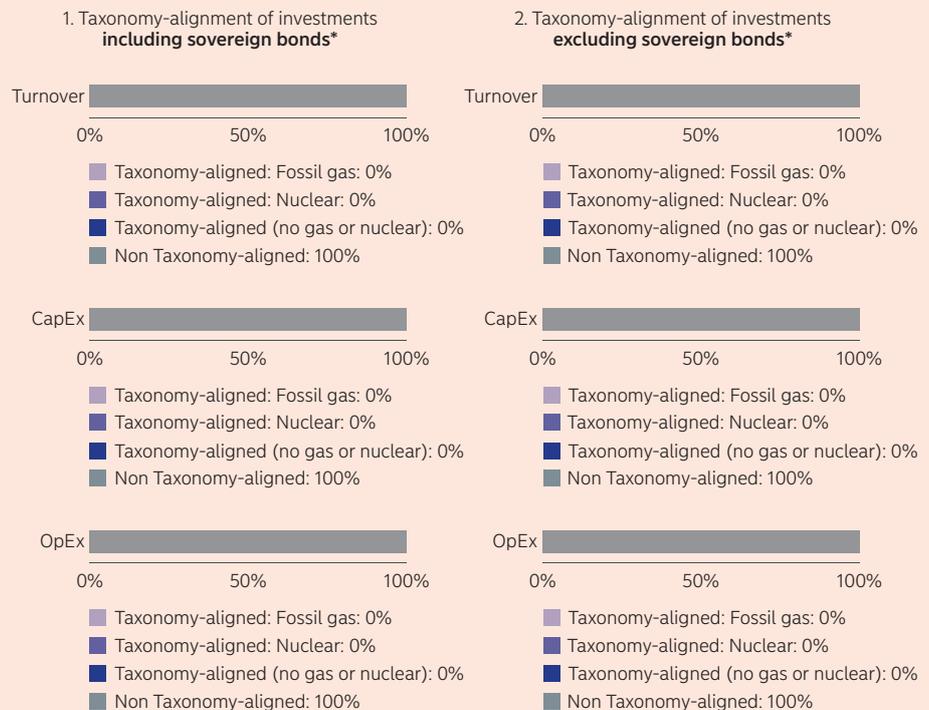

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

**The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 62 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 54 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Chinese Equity Fund

**Legal entity identifier:** 549300GQXITIWOH3T895

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 40 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	31 tCO <sub>2</sub> e / m€ invested	97.70 %	96.71 %
	Carbon footprint Scope 1+2+3	295 tCO <sub>2</sub> e / m€ invested	97.70 %	96.71 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	1.73 % involved in violations	97.70 %	96.21 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	31 tCO <sub>2</sub> e / m€ invested	97.70 %	96.71 %
		2022	71 tCO <sub>2</sub> e / m€ invested	97.47 %	97.22 %
	Carbon footprint Scope 1+2+3	2023	295 tCO <sub>2</sub> e / m€ invested	97.70 %	96.71 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	1.73 % involved in violations	97.70 %	96.21 %
		2022	0.00 % involved in violations	97.47 %	97.04 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	2,438 tCO <sub>2</sub> e	97.70 %	96.71 %
		Scope 2 GHG emissions	2,749 tCO <sub>2</sub> e	97.70 %	96.71 %

Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.43 tons / m€ invested	97.70 %	77.95 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	1.73 % involved in violations	97.70 %	96.21 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	3.16 % without policies	97.70 %	81.41 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	10.71 % pay gap	97.70 %	4.62 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	17.84 % (female directors / total directors)	97.70 %	94.57 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	97.70 %	97.26 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

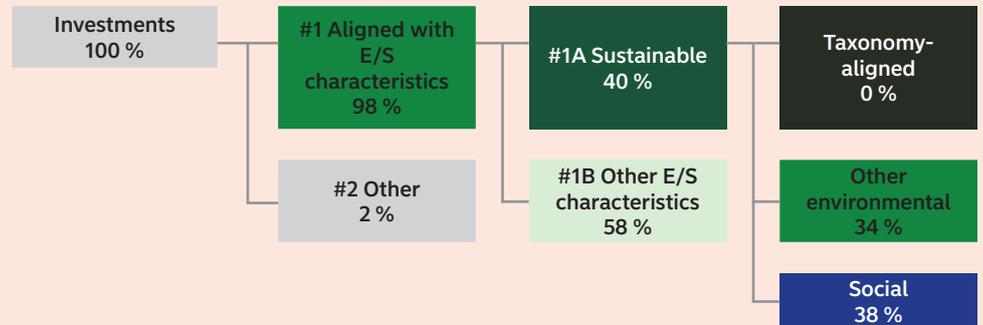

Largest investments	Sector	Assets	Country
Tencent Holdings	Communications	9.21 %	China
Alibaba Group Holding	Communications	9.08 %	China
Meituan	Communications	5.32 %	China
Postal Savings Bank of China	Financial	3.64 %	China
China Merchants Bank	Financial	3.37 %	China
Ping An Insurance Group Co of China	Financial	2.88 %	China
PDD Holdings ADR	Communications	2.72 %	Ireland
Trip.com Group	Communications	2.63 %	China
Baidu ADR	Communications	2.55 %	China
Shenzhou International Group Holdings	Consumer, Cyclical	2.50 %	China
Contemporary Amperex Technology	Consumer, Cyclical	2.30 %	China
NetEase	Technology	2.30 %	China

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Communications	35.70 %
Consumer, Cyclical	17.63 %
Financial	12.85 %
Consumer, Non-cyclical	9.76 %
Technology	9.59 %
Industrial	9.46 %
Cash	2.16 %
Utilities	1.42 %
Basic Materials	1.14 %
Energy	0.28 %
<b>Sum</b>	<b>100.00 %</b>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

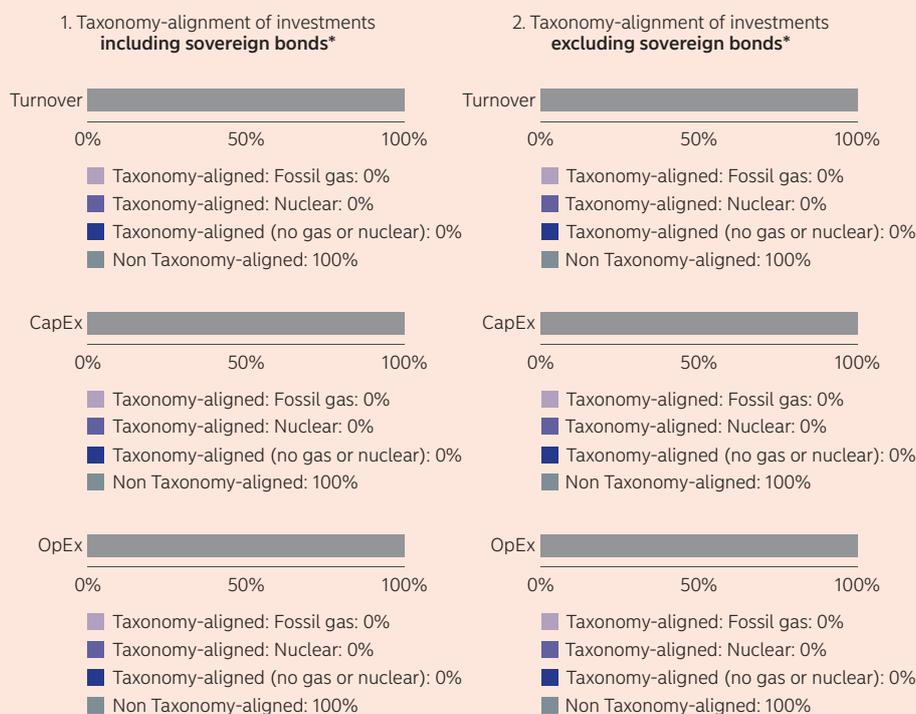

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:  
 In fossil gas       In nuclear energy  
 No

**The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 34 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 38 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Danish Covered Bond Fund

**Legal entity identifier:** 5493006ID4LFX21UEW81

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invested within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	0 tCO <sub>2</sub> e / m€ invested	93.87 %	93.84 %

		2022	147.63 tCO <sub>2</sub> e / m€ of owned GDP	0.54 %	0.54 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	4 tCO <sub>2</sub> e	93.87 %	93.84 %
		Scope 2 GHG emissions	18 tCO <sub>2</sub> e	93.87 %	93.84 %
		Scope 3 GHG emissions	22,056 tCO <sub>2</sub> e	93.87 %	93.84 %
		Total GHG emissions Scope 1+2	22 tCO <sub>2</sub> e	93.87 %	93.84 %
		Total GHG emissions Scope 1+2+3	22,078 tCO <sub>2</sub> e	93.87 %	93.84 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	93.87 %
Cash	4.19 %
Derivatives	1.34 %
Government bonds	0.57 %
FX Forwards	0.03 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

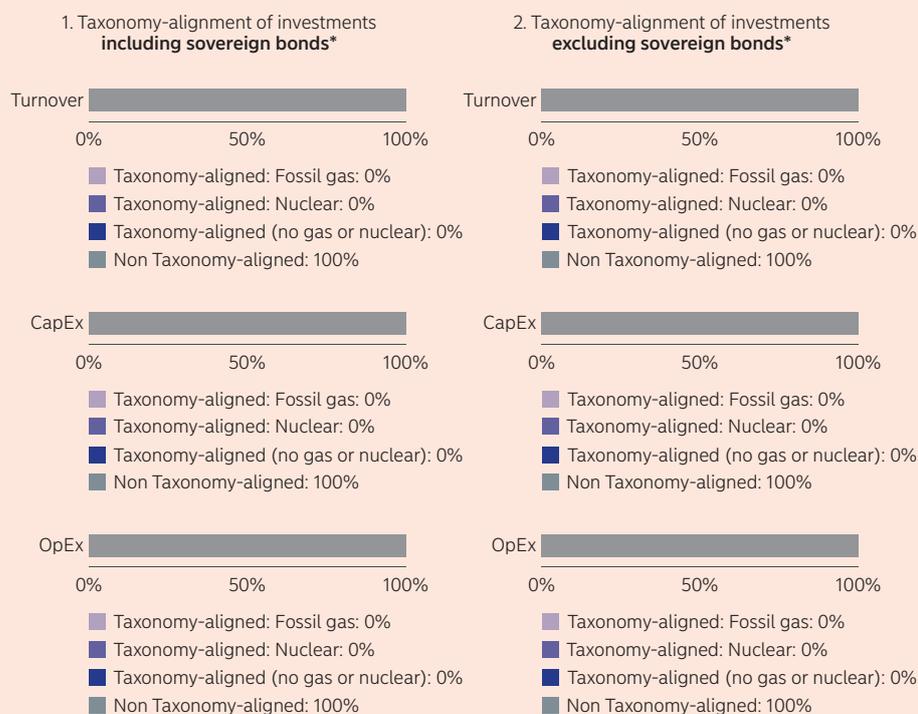

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 45 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Average NAM Sovereign ESG Score	Average numerical score from 1 (worst) - 10 (best)	5.96	72.14 %	69.97 %
Carbon Footprint	Carbon footprint	224 tCO <sub>2</sub> e / m€ invested	25.78 %	21.81 %
	Carbon footprint Scope 1+2+3	486 tCO <sub>2</sub> e / m€ invested	25.78 %	21.61 %
Investee countries subject to social violations (absolute and relative)	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	72.14 %	72.14 %
		0.00 % investee countries subject to violations	72.14 %	72.14 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	25.78 %	20.73 %
Greenhouse Gas Intensity for sovereigns	GHG intensity of investee countries	369.47 tCO <sub>2</sub> e / m€ of GDP	72.14 %	72.14 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● ...and compared to previous periods?

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Average NAM Sovereign ESG Score	Average numerical score from 1 (worst) - 10 (best)	2023	5.96	72.14 %	69.97 %
		2022	6.01	72.94 %	71.78 %

		2022	351.95 tCO <sub>2</sub> e / m€ of owned GDP	72.94 %	70.70 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	4,536 tCO <sub>2</sub> e	25.78 %	21.81 %
		Scope 2 GHG emissions	535 tCO <sub>2</sub> e	25.78 %	21.81 %
		Scope 3 GHG emissions	6,006 tCO <sub>2</sub> e	25.78 %	21.61 %
		Total GHG emissions Scope 1+2	5,071 tCO <sub>2</sub> e	25.78 %	21.81 %
		Total GHG emissions Scope 1+2+3	11,125 tCO <sub>2</sub> e	25.78 %	21.61 %

Peru Government Bond 7.3% 12-08-2033	Government	1.50 %	Peru
Romania Government Bond 3.65% 24-09-2031	Government	1.49 %	Romania
Romania Government Bond 5.8% 26-07-2027	Government	1.47 %	Romania
Romania Government Bond 4.75% 11-10-2034	Government	1.44 %	Romania
Egypt Government Internation 5.25% 06-10-2025	Government	1.43 %	Egypt
Mexico Government Internatio 4.875% 19-05-2033	Government	1.39 %	Mexico
Indonesia Treasury Bond 7.5% 15-04-2040	Government	1.36 %	Indonesia
Indonesia Treasury Bond 6.125% 15-05-2028	Government	1.36 %	Indonesia

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Government bonds	72.43 %
Financial	8.51 %
Communications	5.09 %
Industrial	3.36 %
Utilities	3.02 %
Basic Materials	2.29 %
Cash	1.91 %
Consumer, Non-cyclical	1.61 %
Energy	1.19 %
Technology	0.38 %
Derivatives	0.14 %
Consumer, Cyclical	0.13 %
FX Forwards	-0.06 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

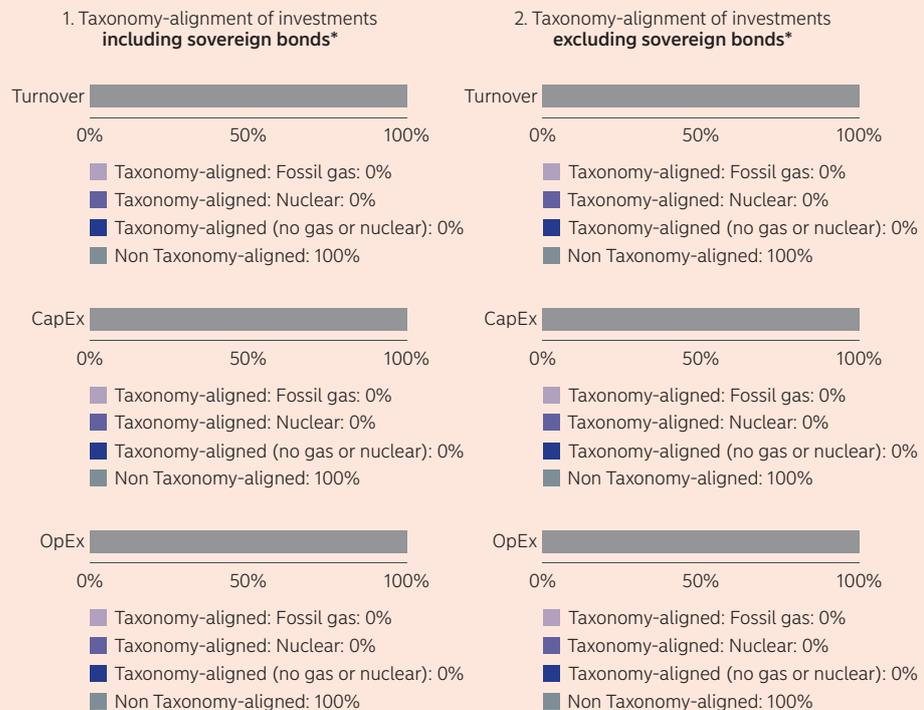

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 41 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 31 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - Emerging Stars Bond Fund

**Legal entity identifier:** 549300F6FENFDTOIKP77

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

**Yes**

**No**

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 47 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Average NAM Sovereign ESG Score	Average numerical score from 1 (worst) - 10 (best)	5.64	72.42 %	72.03 %
Carbon Footprint	Carbon footprint	227 tCO <sub>2</sub> e / m€ invested	25.56 %	21.48 %

		2022	504.35 tCO <sub>2</sub> e / m€ of owned GDP	69.95 %	67.88 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography. The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	56,072 tCO <sub>2</sub> e	25.56 %	21.48 %
		Scope 2 GHG emissions	5,675 tCO <sub>2</sub> e	25.56 %	21.48 %
		Scope 3 GHG emissions	67,837 tCO <sub>2</sub> e	25.56 %	21.38 %
		Total GHG emissions Scope 1+2	61,747 tCO <sub>2</sub> e	25.56 %	21.48 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Government bonds	72.80 %
Financial	8.94 %
Communications	4.98 %
Industrial	3.20 %
Utilities	3.17 %

Technology	0.44 %
Consumer, Cyclical	0.08 %
Derivatives	0.00 %
FX Forwards	-0.01 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

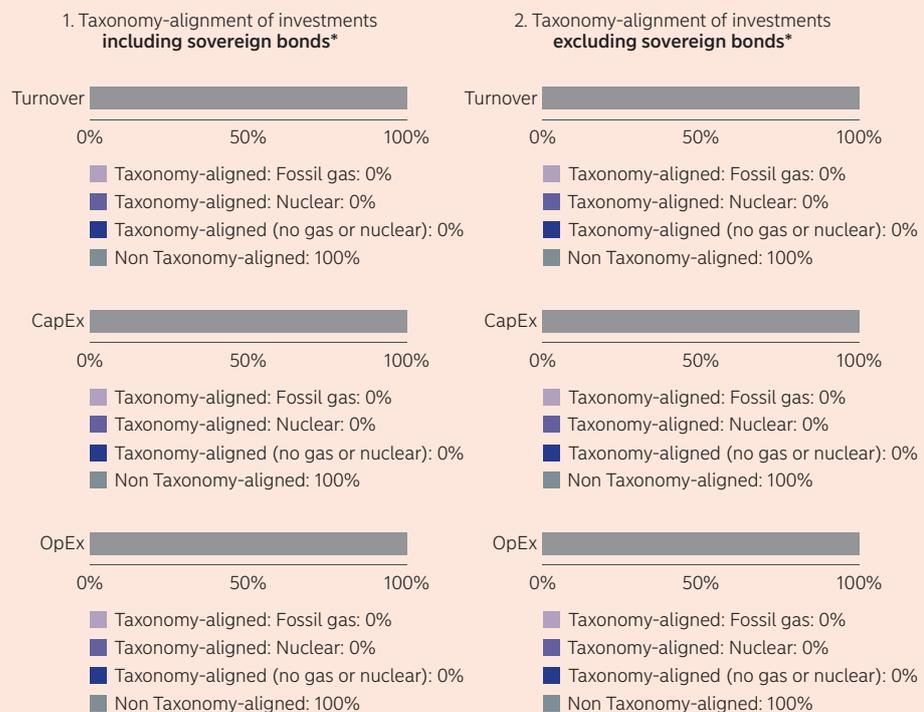

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 45 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 31 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - Emerging Stars Corporate Bond Fund  
**Legal entity identifier:** 549300NKRMXUIKSLCD46

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

Yes
   No

<p><input type="checkbox"/> It made <b>sustainable investments with an environmental objective:</b> _____%</p> <p style="margin-left: 20px;"><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> _____%</p>	<p><input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 82 % of sustainable investments</p> <p style="margin-left: 20px;"><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input checked="" type="checkbox"/> with a social objective</p> <p><input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b></p>
--	---

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Average NAM Sovereign ESG Score	Average numerical score from 1 (worst) - 10 (best)	5.88	1.76 %	1.76 %
Carbon Footprint	Carbon footprint	198 tCO <sub>2</sub> e / m€ invested	96.46 %	82.09 %
	Carbon footprint Scope 1+2+3	487 tCO <sub>2</sub> e / m€ invested	96.46 %	81.64 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	9,859 tCO <sub>2</sub> e	96.46 %	82.09 %
		Scope 2 GHG emissions	1,448 tCO <sub>2</sub> e	96.46 %	82.09 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	33.22 %
Communications	18.09 %
Industrial	11.40 %
Utilities	10.09 %
Basic Materials	9.94 %
Consumer, Non-cyclical	6.35 %
Energy	4.77 %
Government bonds	2.75 %
Cash	1.75 %
Technology	1.12 %
Consumer, Cyclical	0.48 %
Derivatives	0.04 %
FX Forwards	0.00 %
<b>Sum</b>	<b>100.00 %</b>

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

- Yes:  
 In fossil gas       In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

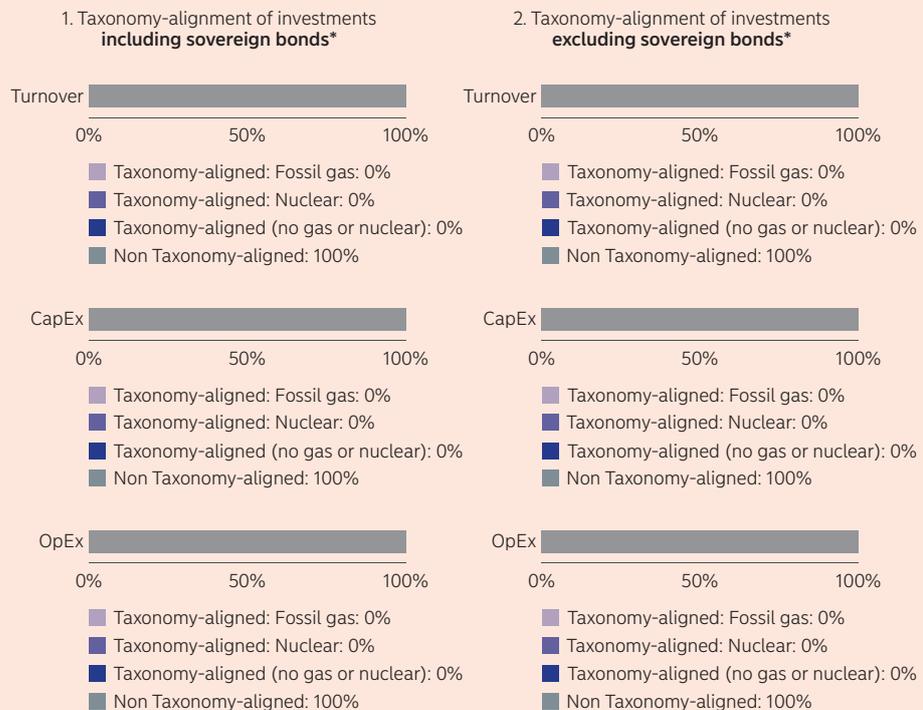

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 78 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 62 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - Emerging Stars Equity Fund

**Legal entity identifier:** 549300UFJRQ77N3UYE48

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

**Yes**

**No**

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 73 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	18 tCO <sub>2</sub> e / m€ invested	98.56 %	98.02 %
	Carbon footprint Scope 1+2+3	153 tCO <sub>2</sub> e / m€ invested	98.56 %	98.02 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.39 % involved in violations	98.56 %	98.02 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	18 tCO <sub>2</sub> e / m€ invested	98.56 %	98.02 %
		2022	15 tCO <sub>2</sub> e / m€ invested	97.66 %	97.49 %
	Carbon footprint Scope 1+2+3	2023	153 tCO <sub>2</sub> e / m€ invested	98.56 %	98.02 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.39 % involved in violations	98.56 %	98.02 %
		2022	0.00 % involved in violations	97.66 %	97.61 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	26.46 %
Technology	21.80 %
Communications	21.25 %
Consumer, Cyclical	9.58 %
Industrial	7.50 %
Consumer, Non-cyclical	6.71 %
Energy	3.58 %
Basic Materials	1.69 %
Cash	1.44 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

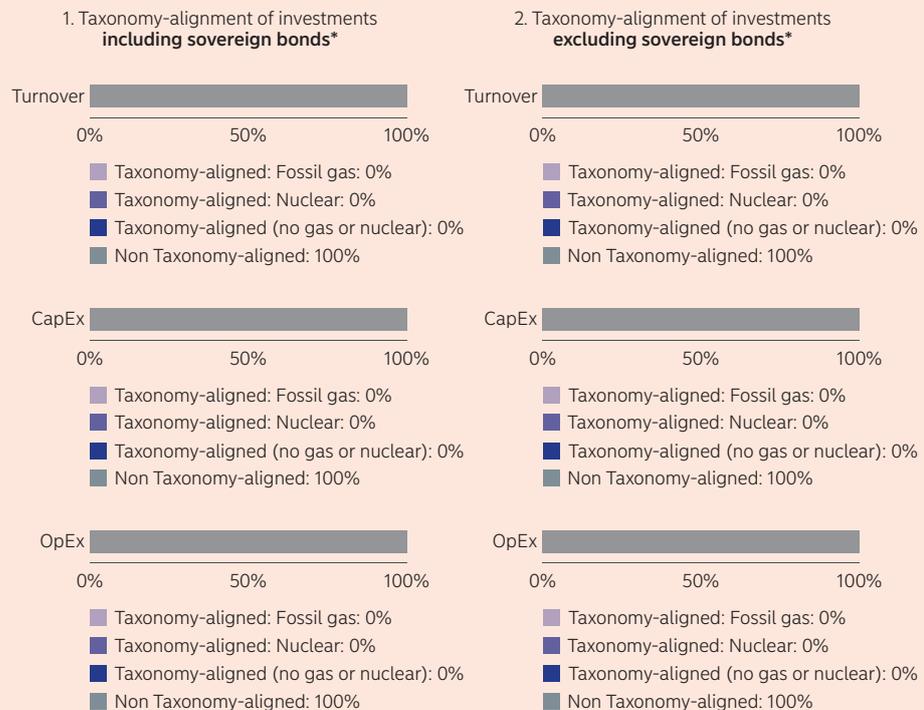

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 62 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 55 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - Emerging Stars ex China Equity Fund

**Legal entity identifier:** 54930066X6UUR3V1T114

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 71 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	21 tCO <sub>2</sub> e / m€ invested	96.32 %	96.32 %
	Carbon footprint Scope 1+2+3	153 tCO <sub>2</sub> e / m€ invested	96.32 %	96.32 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	96.32 %	96.32 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	21 tCO <sub>2</sub> e / m€ invested	96.32 %	96.32 %
		2022	20 tCO <sub>2</sub> e / m€ invested	93.47 %	93.47 %
	Carbon footprint Scope 1+2+3	2023	153 tCO <sub>2</sub> e / m€ invested	96.32 %	96.32 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.00 % involved in violations	96.32 %	96.32 %
		2022	0.00 % involved in violations	93.47 %	93.47 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The "do no significant harm" principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	68 tCO <sub>2</sub> e	96.32 %	96.32 %
		Scope 2 GHG emissions	154 tCO <sub>2</sub> e	96.32 %	96.32 %
		Scope 3 GHG emissions	1,411 tCO <sub>2</sub> e	96.32 %	96.32 %
		Total GHG emissions Scope 1+2	222 tCO <sub>2</sub> e	96.32 %	96.32 %
		Total GHG emissions Scope 1+2+3	1,633 tCO <sub>2</sub> e	96.32 %	96.32 %
	Carbon footprint	Carbon footprint	21 tCO <sub>2</sub> e / m€ invested	96.32 %	96.32 %

Antofagasta	Basic Materials	3.30 %	Chile
MercadoLibre	Communications	3.22 %	Uruguay

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	34.06 %
Technology	24.18 %
Consumer, Cyclical	10.25 %
Communications	9.91 %
Consumer, Non-cyclical	7.27 %
Industrial	7.11 %
Cash	3.68 %
Basic Materials	3.53 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

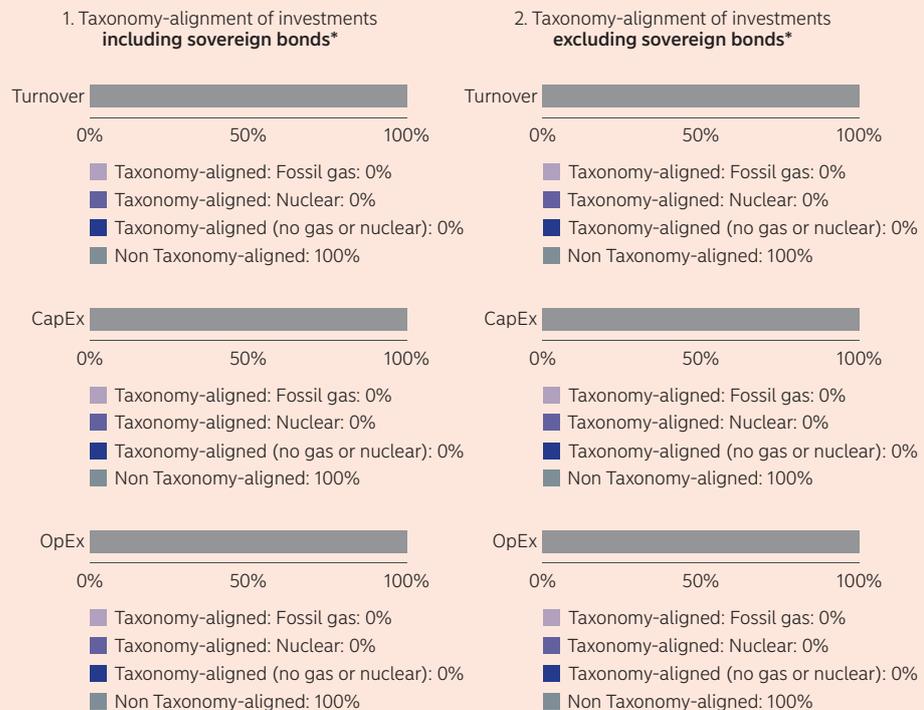

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 58 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 58 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - Emerging Stars Local Bond Fund

**Legal entity identifier:** 5493009USMG00QQ0TE12

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

**Yes**

**No**

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 46 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Average NAM Sovereign ESG Score	Average numerical score from 1 (worst) - 10 (best)	6.21	63.07 %	62.62 %
Carbon Footprint	Carbon footprint	0 tCO <sub>2</sub> e / m€ invested	35.31 %	34.91 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	1 tCO <sub>2</sub> e	35.31 %	34.91 %
		Scope 2 GHG emissions	2 tCO <sub>2</sub> e	35.31 %	34.91 %

Republic of Poland Governmen 2.75% 25-10-2029	Government	1.54 %	Poland

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

### ● In which economic sectors were the investments made?

Sector	Assets
Government bonds	98.27 %
Cash	1.52 %
Financial	0.11 %
FX Forwards	0.09 %
Derivatives	0.00 %
<b>Sum</b>	<b>100.00 %</b>

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

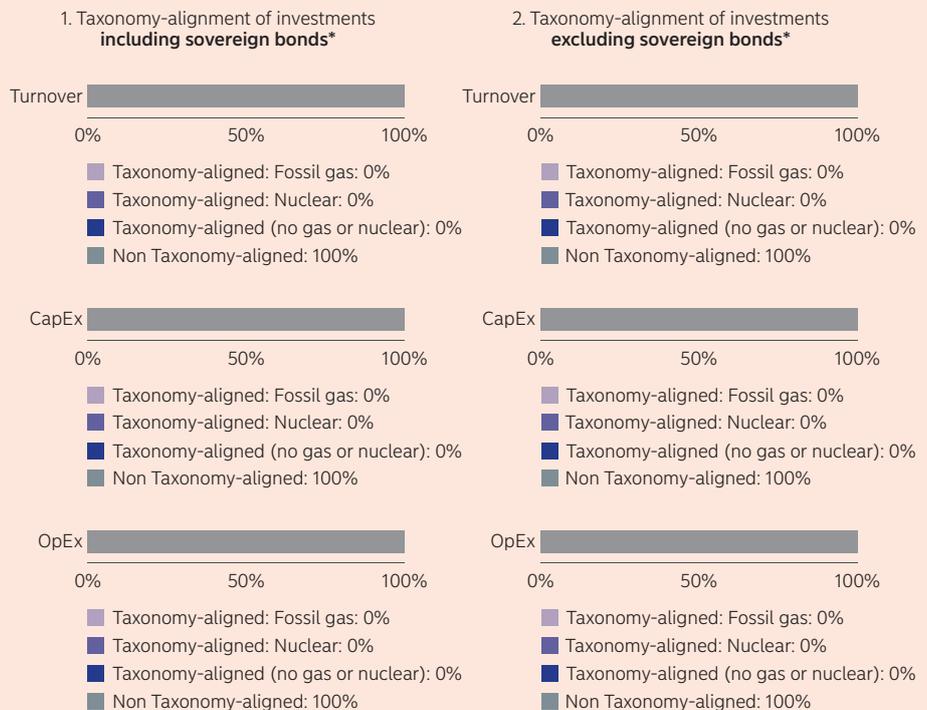

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

**Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:  
 In fossil gas       In nuclear energy  
 No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 44 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 38 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - Emerging Wealth Equity Fund

**Legal entity identifier:** 5493000WHGQ6OST4Q544

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 56 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	16 tCO <sub>2</sub> e / m€ invested	98.11 %	97.68 %
	Carbon footprint Scope 1+2+3	106 tCO <sub>2</sub> e / m€ invested	98.11 %	97.68 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.55 % involved in violations	98.11 %	98.11 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● *...and compared to previous periods?*

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	16 tCO <sub>2</sub> e / m€ invested	98.11 %	97.68 %

	Carbon footprint Scope 1+2+3	2023	106 tCO <sub>2</sub> e / m€ invested	98.11 %	97.68 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.55 % involved in violations	98.11 %	98.11 %
		2022	0.00 % involved in violations	96.60 %	96.39 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the Sustainable Investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, was confirmed as part of the process. Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator. ss to identify sustainable investments using Nordea Asset Management's PAI tool.

*The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The "do no significant harm" principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	228 tCO <sub>2</sub> e	98.11 %	97.68 %
		Scope 2 GHG emissions	508 tCO <sub>2</sub> e	98.11 %	97.68 %
		Scope 3 GHG emissions	4,132 tCO <sub>2</sub> e	98.11 %	97.68 %
		Total GHG emissions Scope 1+2	736 tCO <sub>2</sub> e	98.11 %	97.68 %
		Total GHG emissions Scope 1+2+3	4,869 tCO <sub>2</sub> e	98.11 %	97.68 %
	Carbon footprint	Carbon footprint	16 tCO <sub>2</sub> e / m€ invested	98.11 %	97.68 %
		Carbon footprint Scope 1+2+3	106 tCO <sub>2</sub> e / m€ invested	98.11 %	97.68 %
	GHG intensity of investee companies	GHG intensity of investee companies	77 tCO <sub>2</sub> e / m€ of owned revenue	98.11 %	97.68 %
		GHG intensity of investee companies Scope 1+2+3	580 tCO <sub>2</sub> e / m€ of owned revenue	98.11 %	97.46 %
	Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	0.00 % investments in fossil fuels	98.11 %	93.23 %
	Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources	85.16 % non-renewable energy consumption	98.11 %	60.81 %
			0.00 % non-renewable energy production	98.11 %	0.00 %

## CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	Energy consumption intensity per high impact climate sector	Agriculture forestry and fishing (A)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Mining and quarrying (B)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Manufacturing (C)	0.17 GWh / m€ of revenue	34.14 %	33.50 %
		Electricity gas steam and air conditioning supply (D)	0.00 GWh / m€ of revenue	0.00 %	0.00 %

		Biodiversity	Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas	0.00 % with negative impact
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.00 tons / m€ invested	98.11 %	8.53 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.15 tons / m€ invested	98.11 %	81.52 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.55 % involved in violations	98.11 %	98.11 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	1.49 % without policies	98.11 %	89.03 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	5.00 % pay gap	98.11 %	23.47 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	22.94 % (female directors / total directors)	98.11 %	94.40 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	98.11 %	98.11 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

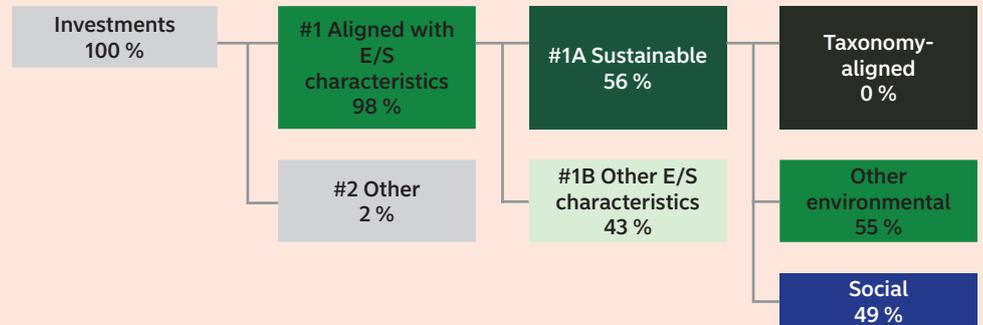

Largest investments	Sector	Assets	Country
Sands China	Consumer, Cyclical	6.00 %	Macau
Taiwan Semiconductor Manufacturing	Technology	5.50 %	Taiwan, Province of China
Infineon Technologies	Technology	4.51 %	Germany
Tencent Holdings	Communications	4.22 %	China
AIA Group	Financial	4.19 %	Hong Kong
QUALCOMM	Technology	4.13 %	United States
HDFC Bank ADR	Financial	4.12 %	India
Kotak Mahindra Bank	Financial	3.99 %	India
Alibaba Group Holding	Communications	3.94 %	China
Trip.com Group	Communications	3.74 %	China
Baidu	Communications	3.72 %	China

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	24.42 %
Consumer, Cyclical	23.62 %
Communications	20.63 %
Technology	14.75 %
Consumer, Non-cyclical	11.42 %
Basic Materials	1.89 %
Cash	1.88 %
Industrial	1.40 %
<b>Sum</b>	<b>100.00 %</b>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

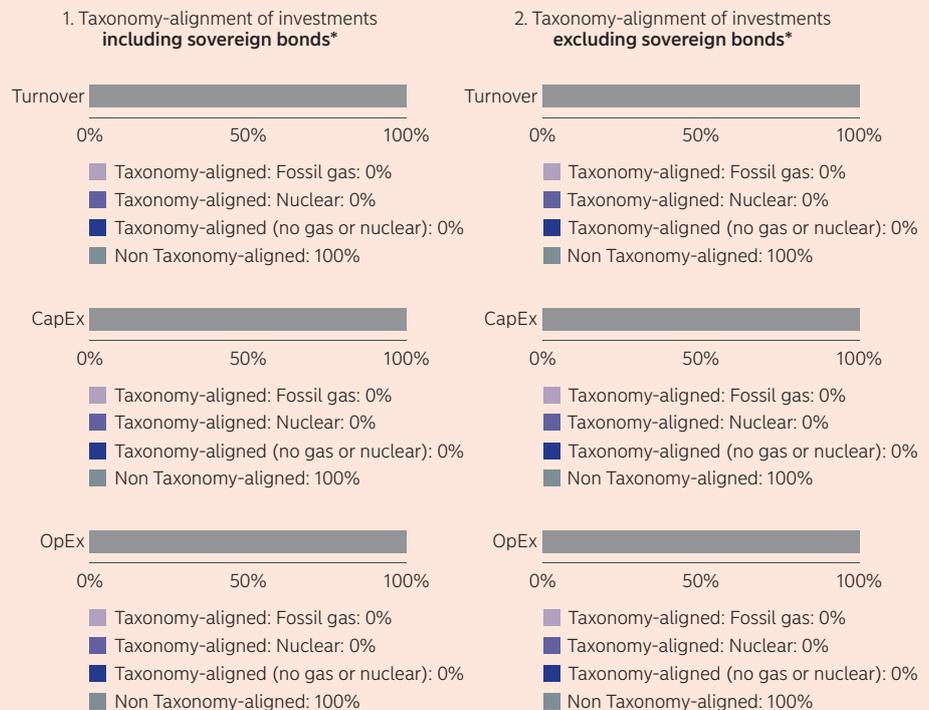

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:  
 In fossil gas       In nuclear energy  
 No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 55 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 49 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - EUR Corporate Bond Fund 1-3 Years

**Legal entity identifier:** 549300RUTOHWG1QJNA59

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 61 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	78 tCO <sub>2</sub> e / m€ invested	95.76 %	88.55 %
	Carbon footprint Scope 1+2+3	437 tCO <sub>2</sub> e / m€ invested	95.76 %	88.55 %
Investee countries subject to social violations (absolute and relative)	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	3.32 %	3.32 %
		0.00 % investee countries subject to violations	3.32 %	3.32 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.12 % involved in violations	95.76 %	88.80 %
Greenhouse Gas Intensity for sovereigns	GHG intensity of investee countries	136.21 tCO <sub>2</sub> e / m€ of GDP	3.32 %	3.32 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● ...and compared to previous periods?

		2022	193.02 tCO <sub>2</sub> e / m€ of owned GDP	3.07 %	3.07 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	18,109 tCO <sub>2</sub> e	95.76 %	88.55 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	47.17 %
Consumer, Non-cyclical	13.30 %
Utilities	10.06 %
Consumer, Cyclical	8.26 %
Industrial	7.51 %
Communications	6.85 %
Government bonds	3.32 %
Technology	1.13 %
Cash	0.92 %
Basic Materials	0.80 %
Energy	0.69 %
FX Forwards	0.00 %
Derivatives	0.00 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

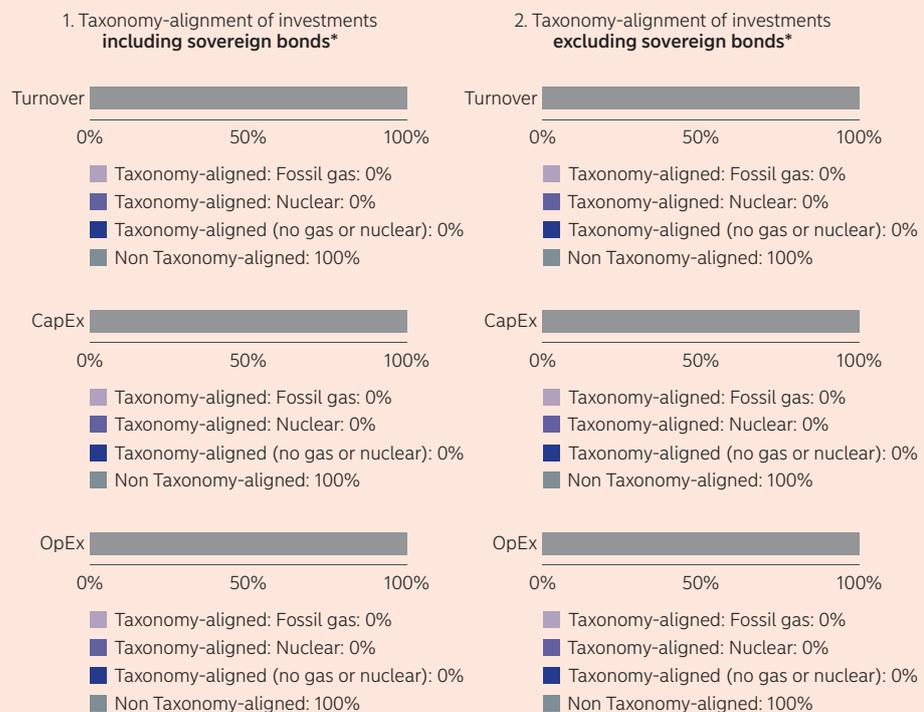

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 56 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 49 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - European Bond Fund

**Legal entity identifier:** 549300FSVWLOVAR25025

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

**Yes**

**No**

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 11 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invested within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	0 tCO <sub>2</sub> e / m€ invested	25.75 %	16.05 %
	Carbon footprint Scope 1+2+3	87 tCO <sub>2</sub> e / m€ invested	25.75 %	14.75 %

		2022	285.16 tCO <sub>2</sub> e / m€ of owned GDP	72.02 %	70.21 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	1 tCO <sub>2</sub> e	25.75 %	16.05 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Government bonds	82.37 %
Financial	15.17 %
Cash	2.69 %
Derivatives	0.04 %
FX Forwards	-0.27 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

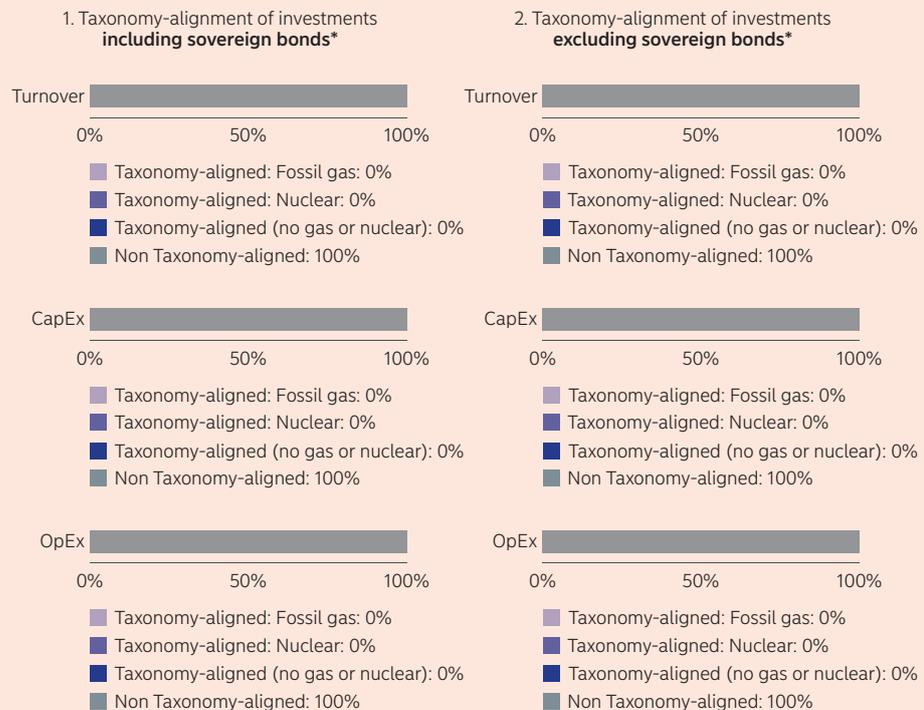

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 5 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - European Corporate Bond Fund

**Legal entity identifier:** 549300C320J1NRW8KC43

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

**Yes**

**No**

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 64 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invested within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	71 tCO <sub>2</sub> e / m€ invested	94.40 %	84.18 %
	Carbon footprint Scope 1+2+3	406 tCO <sub>2</sub> e / m€ invested	94.40 %	84.18 %
Investee countries subject to social violations (absolute and relative)	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	4.41 %	4.41 %
		0.00 % investee countries subject to violations	4.41 %	4.41 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.17 % involved in violations	94.40 %	85.74 %
Greenhouse Gas Intensity for sovereigns	GHG intensity of investee countries	203.47 tCO <sub>2</sub> e / m€ of GDP	4.41 %	4.41 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● ...and compared to previous periods?

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage

		2022	193.02 tCO <sub>2</sub> e / m€ of owned GDP	3.03 %	3.03 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	26,374 tCO <sub>2</sub> e	94.40 %	84.18 %
		Scope 2 GHG emissions	2,348 tCO <sub>2</sub> e	94.40 %	84.18 %
		Scope 3 GHG emissions	135,812 tCO <sub>2</sub> e	94.40 %	84.18 %
		Total GHG emissions Scope 1+2	28,722 tCO <sub>2</sub> e	94.40 %	84.18 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	49.35 %
Utilities	19.36 %
Consumer, Non-cyclical	9.79 %
Consumer, Cyclical	7.35 %
Government bonds	4.57 %

Industrial	2.13 %
Cash	1.16 %
Basic Materials	0.95 %
Energy	0.68 %
Technology	0.09 %
Derivatives	0.02 %
FX Forwards	0.00 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

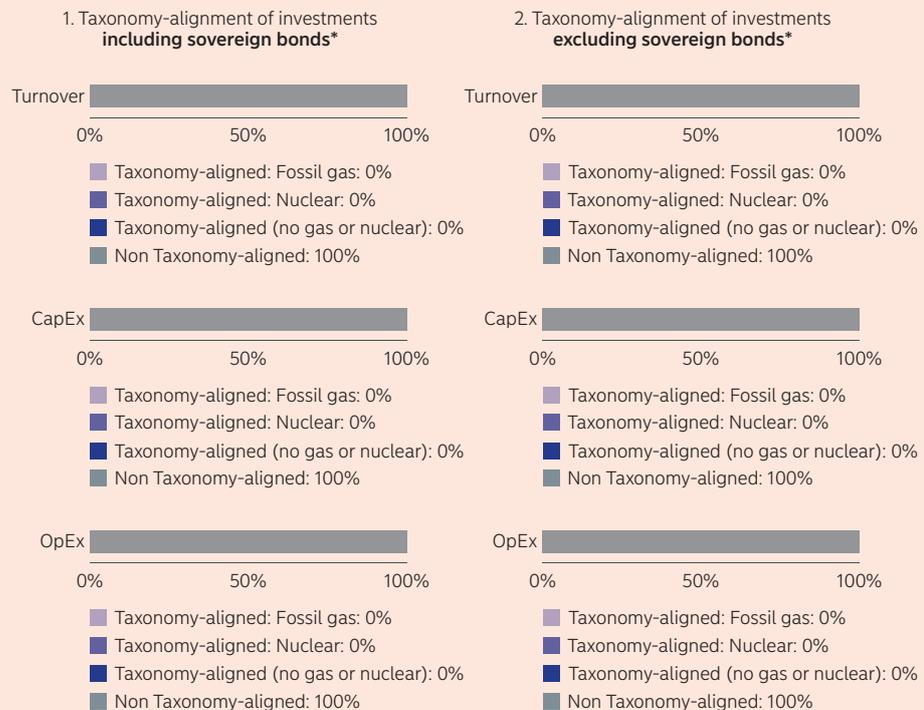

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 59 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 43 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - European Corporate Stars Bond Fund  
**Legal entity identifier:** 5493004J0DU336JUI826

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective:</b> _____% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> _____%	<input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 65 % of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul> <input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **How did the sustainability indicators perform?**

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	50,934 tCO <sub>2</sub> e	92.05 %	82.83 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	52.85 %
Utilities	16.46 %
Consumer, Non-cyclical	8.64 %
Government bonds	6.25 %
Communications	4.55 %
Consumer, Cyclical	4.43 %
Industrial	3.35 %
Cash	1.71 %
Basic Materials	0.92 %
Energy	0.69 %
Technology	0.16 %
FX Forwards	0.00 %
Derivatives	0.00 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

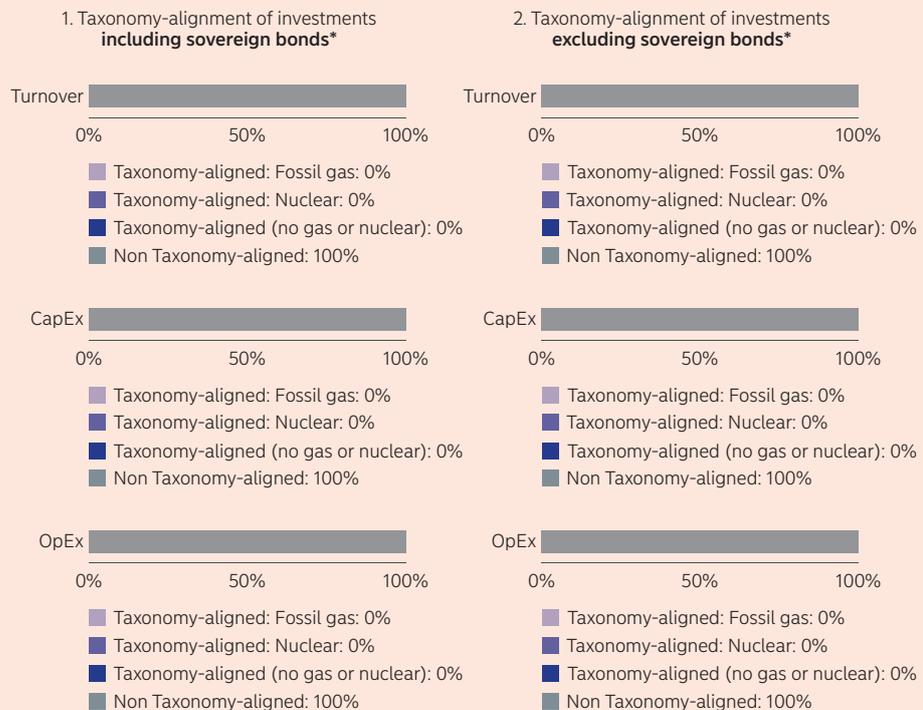

Yes:

In fossil gas

In nuclear energy

No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 60 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 44 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - European Covered Bond Fund

**Legal entity identifier:** 549300ODKXRGT6EIFH77

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 4 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invested within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	0 tCO <sub>2</sub> e / m€ invested	84.03 %	74.68 %

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	672 tCO <sub>2</sub> e	84.03 %	74.68 %
		Scope 2 GHG emissions	1,321 tCO <sub>2</sub> e	84.03 %	74.68 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

### ● In which economic sectors were the investments made?

Sector	Assets
Financial	79.00 %
Government bonds	18.32 %
Cash	2.71 %
FX Forwards	0.00 %
Derivatives	-0.03 %
<b>Sum</b>	<b>100.00 %</b>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

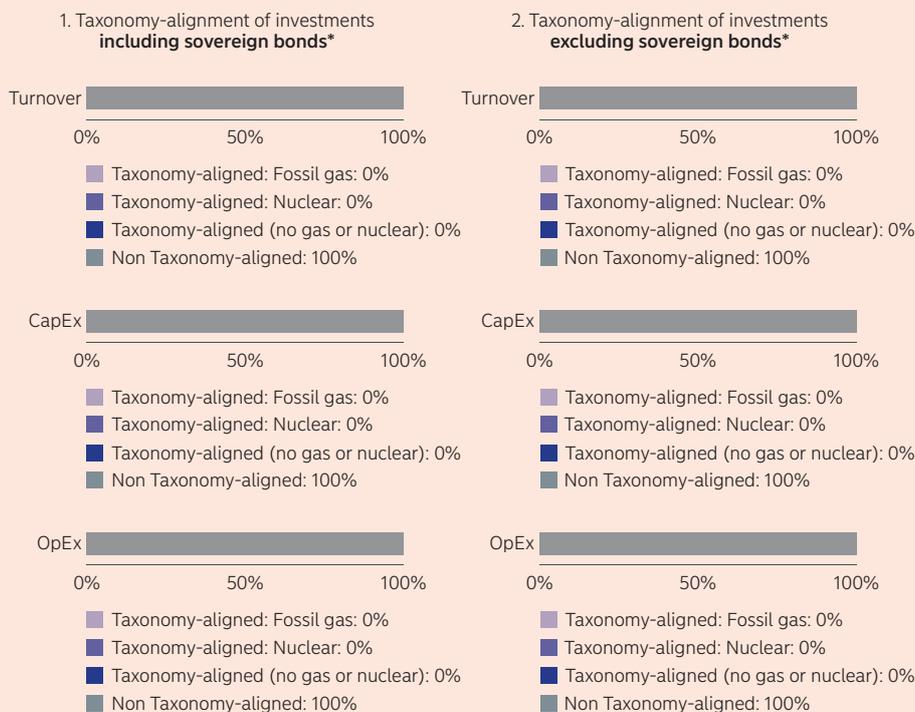

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:  
 In fossil gas       In nuclear energy  
 No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 2 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 3 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - European Covered Bond Opportunities Fund

**Legal entity identifier:** 549300WUBHZSIK6U640

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 5 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invested within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	1 tCO <sub>2</sub> e / m€ invested	39.99 %	33.24 %
	Carbon footprint Scope 1+2+3	55 tCO <sub>2</sub> e / m€ invested	39.99 %	33.20 %
Investee countries subject to social violations (absolute and relative)	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	53.87 %	53.57 %
		0.00 % investee countries subject to violations	53.87 %	53.57 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	39.99 %	28.84 %
Greenhouse Gas Intensity for sovereigns	GHG intensity of investee countries	219.25 tCO <sub>2</sub> e / m€ of GDP	53.87 %	53.07 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● ...and compared to previous periods?

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage

		2022	185.70 tCO <sub>2</sub> e / m€ of owned GDP	46.91 %	46.24 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	73 tCO <sub>2</sub> e	39.99 %	33.24 %
		Scope 2 GHG emissions	285 tCO <sub>2</sub> e	39.99 %	33.24 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

### In which economic sectors were the investments made?

Sector	Assets
Government bonds	57.48 %
Financial	36.39 %
Cash	3.25 %
Derivatives	2.88 %
FX Forwards	0.01 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

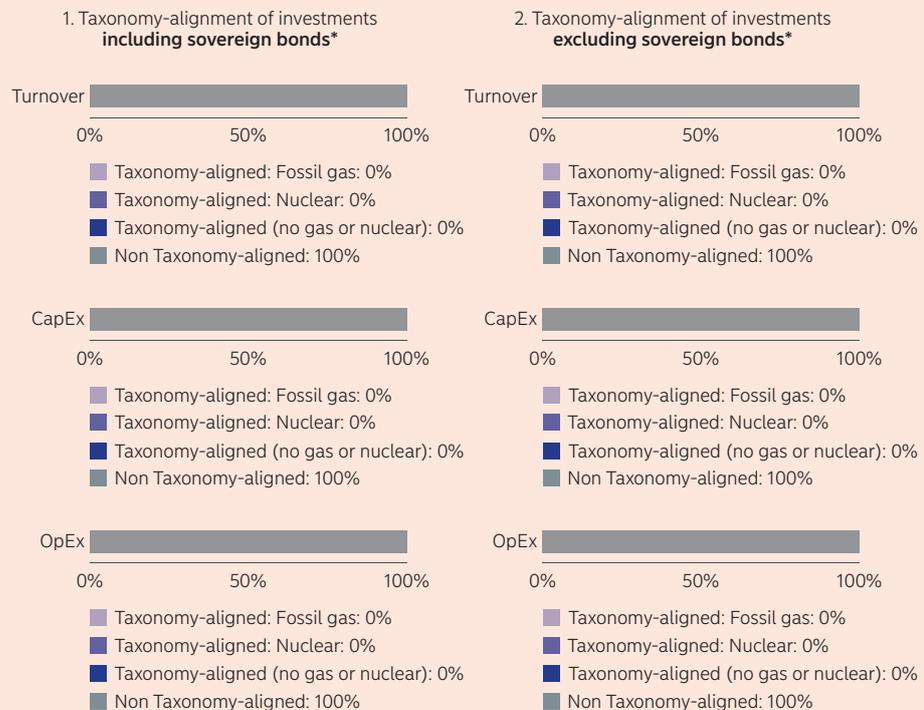

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 4 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 1 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - European Cross Credit Fund

**Legal entity identifier:** 549300HQ4F0MHYF7TI45

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

Yes
   No

<p><input type="checkbox"/> It made <b>sustainable investments with an environmental objective:</b> _____%</p> <p style="margin-left: 20px;"><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> _____%</p>	<p><input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 62 % of sustainable investments</p> <p style="margin-left: 20px;"><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input checked="" type="checkbox"/> with a social objective</p> <p><input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b></p>
--	---

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	25 tCO <sub>2</sub> e / m€ invested	97.70 %	96.39 %
	Carbon footprint Scope 1+2+3	326 tCO <sub>2</sub> e / m€ invested	97.70 %	96.39 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	97.70 %	96.98 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● *...and compared to previous periods?*

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	112 tCO <sub>2</sub> e / m€ invested	98.55 %	79.00 %
		2022	113 tCO <sub>2</sub> e / m€ invested	98.66 %	76.02 %
	Carbon footprint Scope 1+2+3	2023	662 tCO <sub>2</sub> e / m€ invested	98.55 %	79.00 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.15 % involved in violations	98.55 %	83.32 %
		2022	0.22 % involved in violations	98.66 %	83.22 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

***- How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The "do no significant harm" principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	50,183 tCO <sub>2</sub> e	98.55 %	79.00 %
		Scope 2 GHG emissions	10,673 tCO <sub>2</sub> e	98.55 %	79.00 %

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

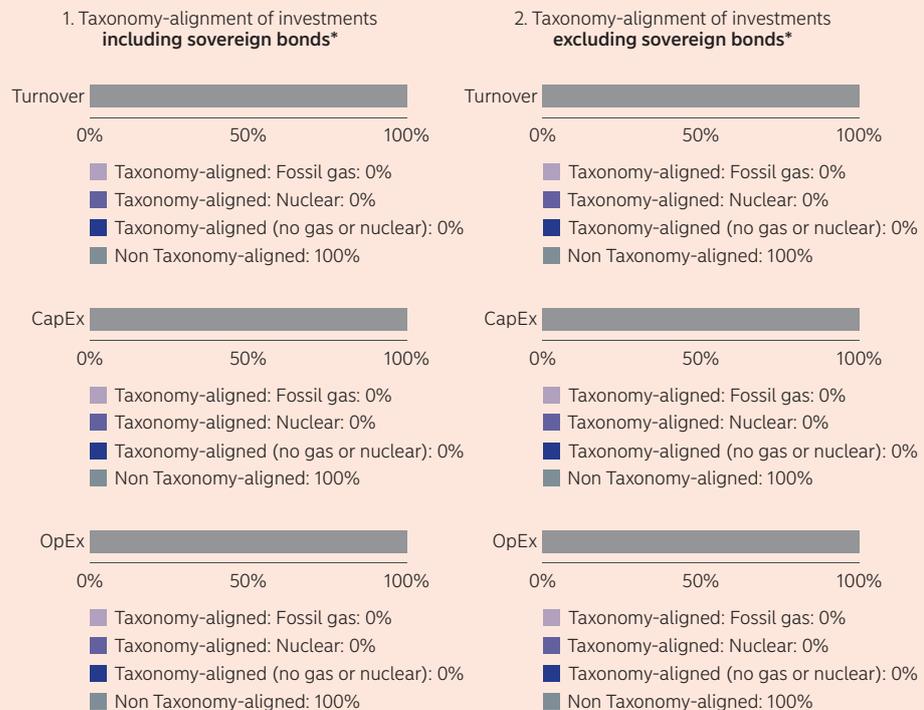

Yes:

In fossil gas

In nuclear energy

No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 55 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 50 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - European Financial Debt Fund

**Legal entity identifier:** 5493001SUQRY2LG8S445

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 46 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invested within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	1 tCO <sub>2</sub> e / m€ invested	93.31 %	83.81 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	247 tCO <sub>2</sub> e	93.31 %	83.81 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

### ● In which economic sectors were the investments made?

Sector	Assets
Financial	91.09 %
Cash	7.03 %
Communications	2.22 %
Government bonds	0.00 %
Derivatives	-0.05 %
FX Forwards	-0.29 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

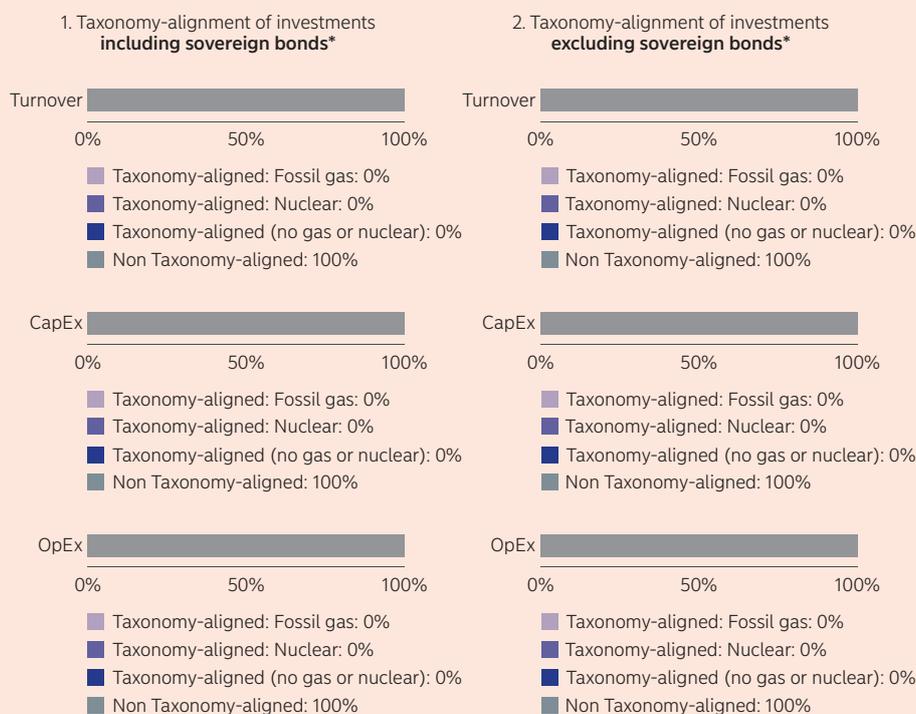

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 43 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 42 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - European High Yield Bond Fund

**Legal entity identifier:** 549300XXBGPCW0NFP308

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

**Yes**

**No**

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 45 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	55 tCO <sub>2</sub> e / m€ invested	92.93 %	54.17 %
	Carbon footprint Scope 1+2+3	715 tCO <sub>2</sub> e / m€ invested	92.93 %	54.17 %
Investee countries subject to social violations (absolute and relative)	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	0.00 %	0.00 %
		0,00 % investee countries subject to violations	0.00 %	0.00 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

**Principal adverse impacts**

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	102,941 tCO <sub>2</sub> e	92.93 %	54.17 %

Douglas GmbH 6% 08-04-2026	Consumer, Cyclical	0.99 %	Germany

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Consumer, Non-cyclical	20.68 %
Financial	17.45 %
Communications	16.50 %
Consumer, Cyclical	15.75 %
Industrial	12.86 %
Cash	6.76 %
Basic Materials	4.00 %
Utilities	2.96 %
Technology	1.65 %
Diversified	1.07 %
Derivatives	0.28 %
FX Forwards	0.03 %
Energy	0.00 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

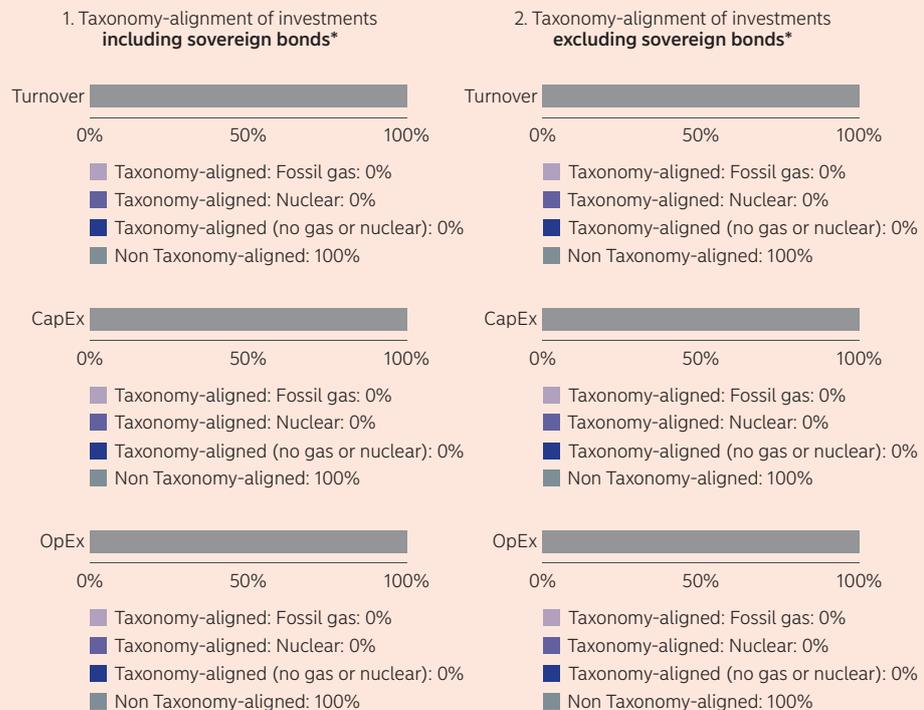

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 40 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 41 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - European High Yield Credit Fund

**Legal entity identifier:** 549300XRUCQ32ZN5RZ02

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 47 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	60 tCO <sub>2</sub> e / m€ invested	96.96 %	57.69 %
	Carbon footprint Scope 1+2+3	449 tCO <sub>2</sub> e / m€ invested	96.96 %	57.69 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	12,362 tCO <sub>2</sub> e	96.96 %	57.69 %
		Scope 2 GHG emissions	3,295 tCO <sub>2</sub> e	96.96 %	57.69 %
		Scope 3 GHG emissions	100,225 tCO <sub>2</sub> e	96.96 %	57.69 %
		Total GHG emissions Scope 1+2	15.657 tCO <sub>2</sub> e	96.96 %	57.69 %
		Total GHG emissions Scope 1+2+3	115.882 tCO <sub>2</sub> e	96.96 %	57.69 %
	Carbon footprint	Carbon footprint	60 tCO <sub>2</sub> e / m€ invested	96.96 %	57.69 %
		Carbon footprint Scope 1+2+3	449 tCO <sub>2</sub> e / m€ invested	96.96 %	57.69 %
	GHG intensity of investee companies	GHG intensity of investee companies	86 tCO <sub>2</sub> e / m€ of owned revenue	96.96 %	68.38 %
		GHG intensity of investee companies Scope 1+2+3	568 tCO <sub>2</sub> e / m€ of owned revenue	96.96 %	66.83 %
	Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	3.70 % investments in fossil fuels	96.96 %	59.73 %
	Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources	62.54 % non-renewable energy consumption	96.96 %	40.91 %
			86.28 % non-renewable energy production	96.96 %	3.59 %

## CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	Energy consumption intensity per high impact climate sector	Agriculture forestry and fishing (A)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Mining and quarrying (B)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Manufacturing (C)	0.60 GWh / m€ of revenue	10.88 %	4.59 %
		Electricity gas steam and air conditioning supply (D)	0.55 GWh / m€ of revenue	3.50 %	3.34 %
		Water supply sewerage waste management and remediation activities (E)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Construction (F)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Wholesale and retail trade repair of motor vehicles and motorcycles (G)	0.03 GWh / m€ of revenue	1.36 %	1.36 %
		Transportation and storage (H)	0.79 GWh / m€ of revenue	0.04 %	0.04 %
		Real estate activities (L)	1.14 GWh / m€ of revenue	0.60 %	0.60 %
Biodiversity	Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas	0.48 % with negative impact	96.96 %	45.40 %
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.01 tons / m€ invested	96.96 %	0.90 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.70 tons / m€ invested	96.96 %	43.30 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

<b>Adverse Sustainability Indicator</b>	<b>Metric</b>	<b>Metric Value</b>	<b>Eligibility</b>	<b>Coverage</b>	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	96.96 %	75.25 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.23 % without policies	96.96 %	49.58 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	13.68 % pay gap	96.96 %	24.72 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	34.52 % (female directors / total directors)	96.96 %	41.70 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	96.96 %	73.23 %

## INDICATORS APPLICABLE TO INVESTMENTS IN SOVEREIGNS AND SUPRANATIONAL

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Environmental	GHG Intensity for sovereigns	GHG intensity of investee countries	0.00 tCO <sub>2</sub> e / m€ of GDP	0.00 %	0.00 %
Social	Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	0.00 %	0.00 %
			0.00 % investee countries subject to violations	0.00 %	0.00 %
Governance	Non-cooperative tax jurisdictions	Investments in jurisdictions on the EU list of non-cooperative jurisdictions for tax purposes	0.00 % investee countries subject to violations	0.00 %	0.00 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

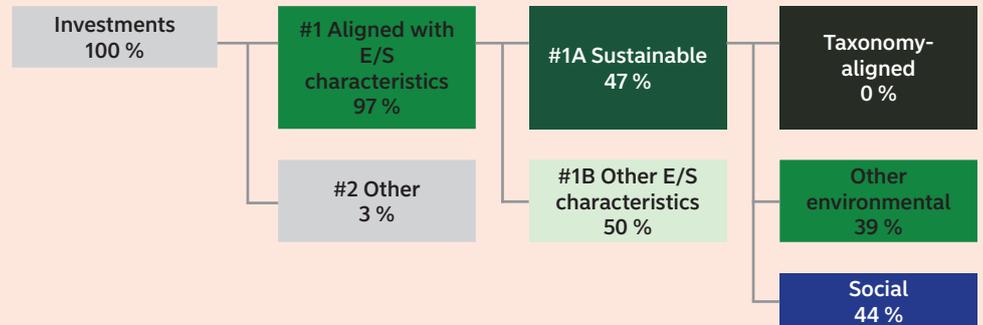

Largest investments	Sector	Assets	Country
Iliad Holding SASU 5.625% 15-10-2028	Communications	1.92 %	France

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Communications	23.95 %
Consumer, Non-cyclical	21.39 %
Financial	18.89 %
Consumer, Cyclical	14.48 %
Industrial	9.38 %
Utilities	3.78 %
Cash	3.57 %
Basic Materials	3.33 %
Diversified	0.99 %
Energy	0.67 %
Technology	0.11 %
FX Forwards	-0.01 %
Derivatives	-0.53 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

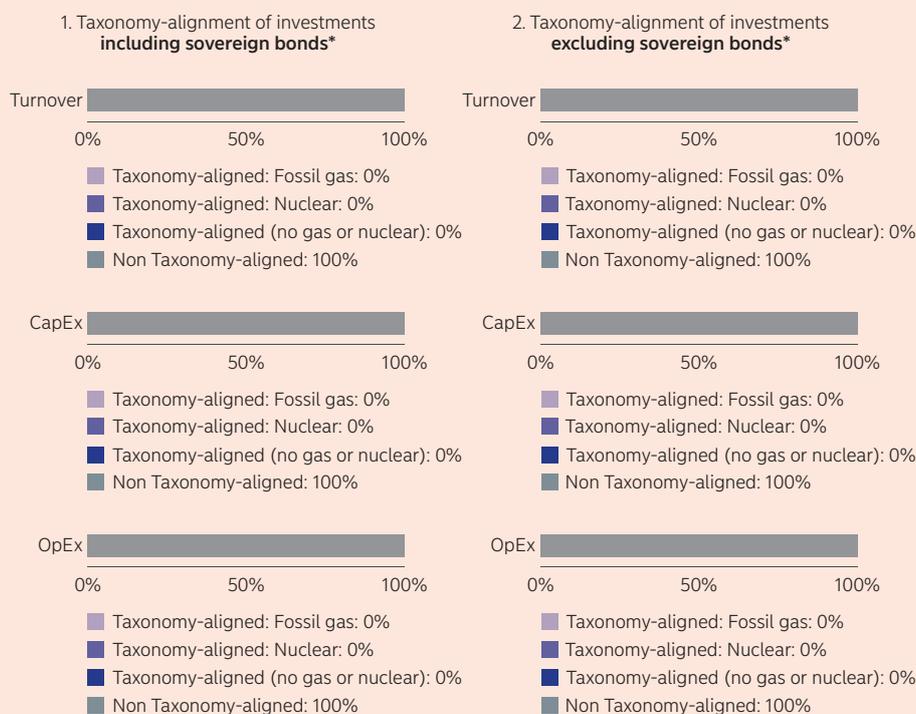

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 39 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 44 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - European High Yield Stars Bond Fund

**Legal entity identifier:** 549300ISX6Y6CZ3YHN56

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 54 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	47 tCO <sub>2</sub> e / m€ invested	96.45 %	59.75 %
	Carbon footprint Scope 1+2+3	363 tCO <sub>2</sub> e / m€ invested	96.45 %	59.75 %
Greenhouse Gas Intensity for sovereigns	GHG intensity of investee countries	0.00 tCO <sub>2</sub> e / m€ of GDP	0.00 %	0.00 %
Investee countries subject to social violations (absolute and relative)	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	0.00 %	0.00 %
		0.00 % investee countries subject to violations	0.00 %	0.00 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	96.45 %	76.52 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage

		2022	0.00 % involved in violations	95.60 %	74.82 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The "do no significant harm" principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	27,558 tCO <sub>2</sub> e	96.45 %	59.75 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sum</b>	<b>100.00 %</b>

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:  
 In fossil gas       In nuclear energy  
 No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

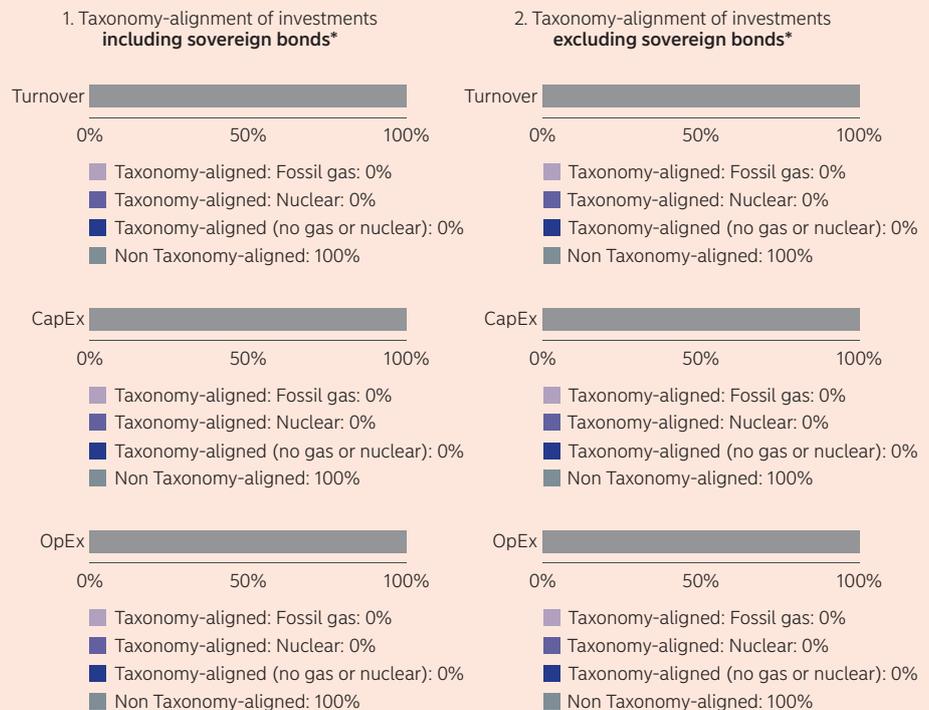

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

**The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 46 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 51 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - European Small and Mid Cap Stars Equity Fund  
**Legal entity identifier:** 5493004B5F53JY919256

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 62 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	25 tCO <sub>2</sub> e / m€ invested	97.70 %	96.39 %
	Carbon footprint Scope 1+2+3	326 tCO <sub>2</sub> e / m€ invested	97.70 %	96.39 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	97.70 %	96.98 %
		0.00 % investee countries subject to violations	99.69 %	99.69 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	25 tCO <sub>2</sub> e / m€ invested	97.70 %	96.39 %
		2022	24 tCO <sub>2</sub> e / m€ invested	97.09 %	96.13 %
	Carbon footprint Scope 1+2+3	2023	326 tCO <sub>2</sub> e / m€ invested	97.70 %	96.39 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.00 % involved in violations	97.70 %	96.98 %
		2022	0.00 % involved in violations	97.09 %	96.54 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	5,459 tCO <sub>2</sub> e	97.70 %	96.39 %
		Scope 2 GHG emissions	3,401 tCO <sub>2</sub> e	97.70 %	96.39 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Industrial	30.85 %
Consumer, Non-cyclical	20.29 %
Financial	17.48 %
Communications	12.96 %
Consumer, Cyclical	10.07 %

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

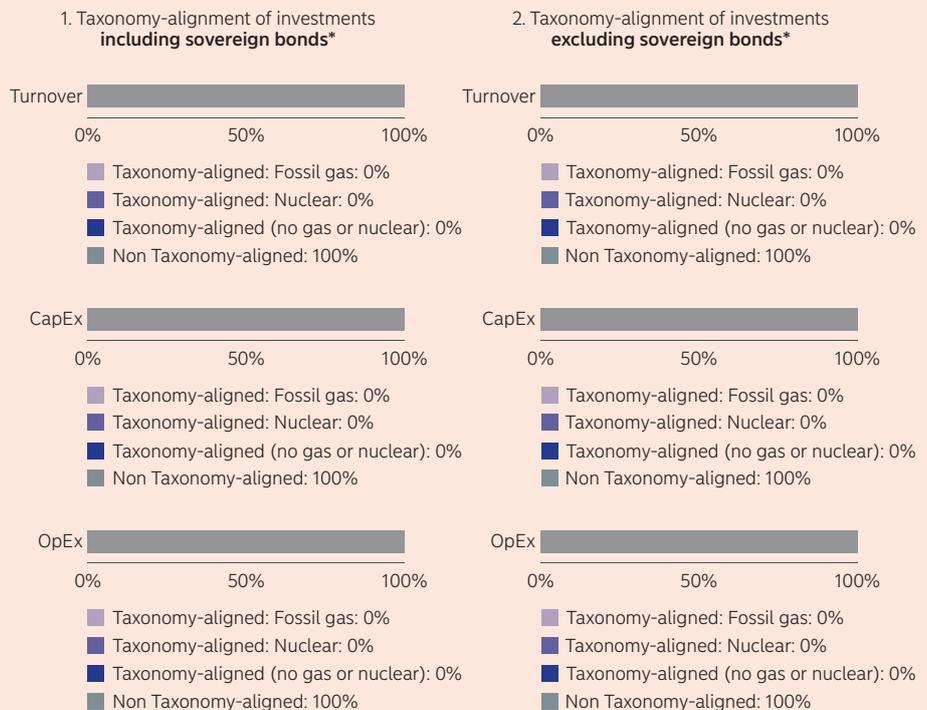

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:  
 In fossil gas       In nuclear energy  
 No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 59 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 51 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - European Stars Equity Fund

**Legal entity identifier:** 54930081LEEGLNYZEC05

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 78 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	74 tCO <sub>2</sub> e / m€ invested	97.24 %	97.24 %
	Carbon footprint Scope 1+2+3	373 tCO <sub>2</sub> e / m€ invested	97.24 %	97.24 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	97.24 %	97.24 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	74 tCO <sub>2</sub> e / m€ invested	97.24 %	97.24 %
		2022	90 tCO <sub>2</sub> e / m€ invested	98.54 %	98.54 %
	Carbon footprint Scope 1+2+3	2023	373 tCO <sub>2</sub> e / m€ invested	97.24 %	97.24 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.00 % involved in violations	97.24 %	97.24 %
		2022	0.00 % involved in violations	98.54 %	98.54 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	93,321 tCO <sub>2</sub> e	97.24 %	97.24 %
		Scope 2 GHG emissions	24,131 tCO <sub>2</sub> e	97.24 %	97.24 %

Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.01 tons / m€ invested	97.24 %	13.50 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	12.28 tons / m€ invested	97.24 %	83.82 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	97.24 %	97.24 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.61 % without policies	97.24 %	96.81 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	12.82 % pay gap	97.24 %	59.27 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	42.13 % (female directors / total directors)	97.24 %	97.24 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	97.24 %	97.24 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

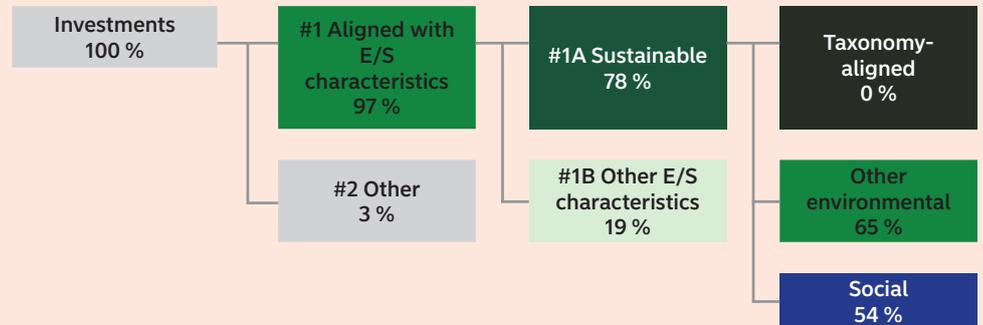

Largest investments	Sector	Assets	Country
Nestle	Consumer, Non-cyclical	5.40 %	Switzerland
Roche Holding	Consumer, Non-cyclical	5.25 %	Switzerland
Siemens	Industrial	4.58 %	Germany
AstraZeneca	Consumer, Non-cyclical	4.41 %	United Kingdom
SAP	Technology	4.02 %	Germany
National Grid	Utilities	3.89 %	United Kingdom
ASML Holding	Technology	3.61 %	Netherlands
BNP Paribas	Financial	3.54 %	France
Deutsche Telekom	Communications	3.52 %	Germany
Legal & General Group	Financial	3.42 %	United Kingdom
Cie de Saint-Gobain	Industrial	2.85 %	France
UniCredit	Financial	2.58 %	Italy
Stora Enso R	Industrial	2.53 %	Finland

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Consumer, Non-cyclical	24.05 %
Financial	18.91 %
Industrial	18.46 %
Technology	9.57 %
Consumer, Cyclical	9.12 %
Communications	6.50 %
Basic Materials	5.10 %
Utilities	3.98 %
Cash	2.76 %
Energy	1.55 %
<b>Sum</b>	<b>100.00 %</b>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

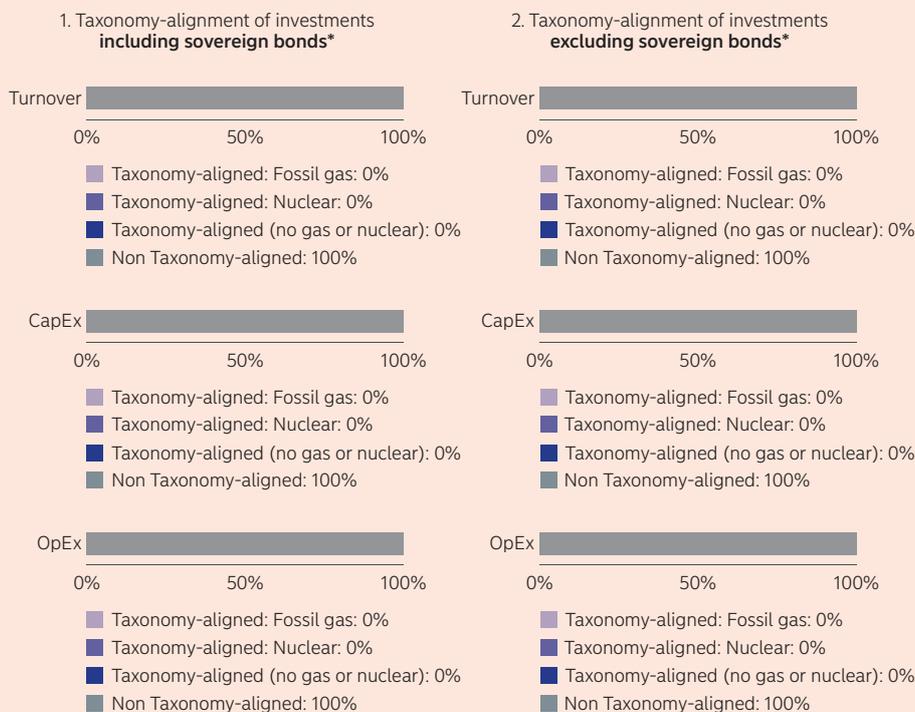

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:  
 In fossil gas       In nuclear energy  
 No

**The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 65 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 54 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Flexible Credit Fund

**Legal entity identifier:** 549300XZGMRU5J181885

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 35 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	1,410 tCO <sub>2</sub> e	92.31 %	37.62 %
		Scope 2 GHG emissions	692 tCO <sub>2</sub> e	92.31 %	37.62 %
		Scope 3 GHG emissions	15,163 tCO <sub>2</sub> e	92.31 %	37.42 %

Ahlstrom Holding 3 Oy 3.625% 04-02-2028	Basic Materials	1.23 %	Finland
Constellation Automotive Fin 4.875% 15-07-2027	Consumer, Cyclical	1.21 %	United Kingdom

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	16.58 %
Consumer, Non-cyclical	16.39 %
Consumer, Cyclical	14.07 %
Communications	13.64 %
Asset backed Securities	11.38 %
Industrial	10.64 %
Cash	6.11 %
Basic Materials	5.86 %
Technology	2.80 %
Derivatives	1.82 %
Utilities	0.71 %
Diversified	0.24 %
FX Forwards	-0.23 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

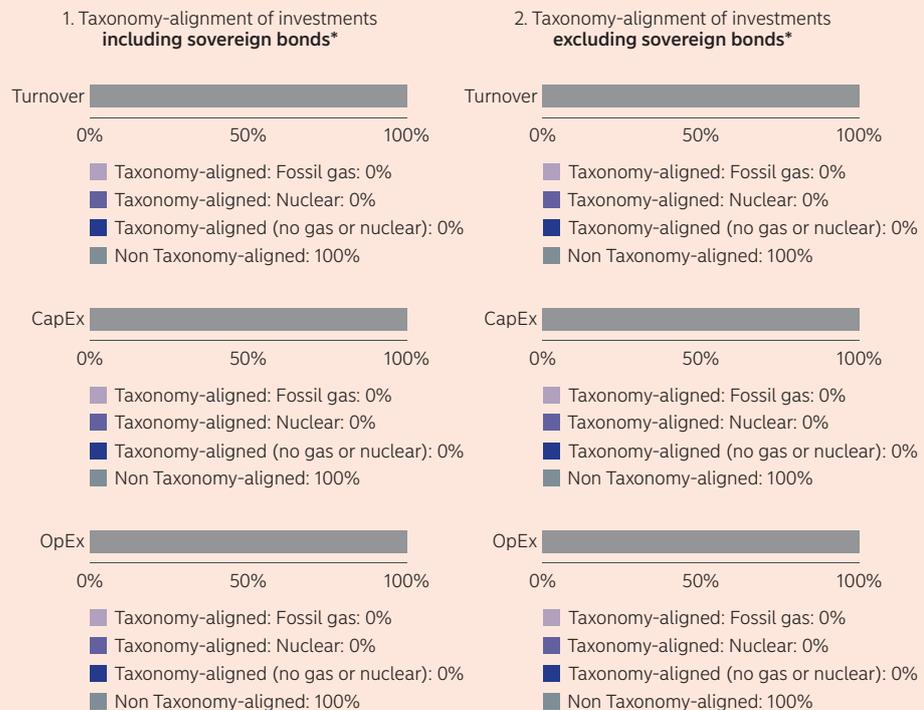

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 33 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 33 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Global Climate and Environment Fund

**Legal entity identifier:** 549300JJG1N66HM3TH21

### Sustainable investment objective

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** 97 %

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** 75 %

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent was the sustainable investment objective of this financial product met?

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

The sustainable investment objective of the fund was to support the 2030 Agenda for Sustainable Development adopted by the UN, with a focus on climate and environment related thematic issues, by investing in companies that are involved in economic activities that are aligned with one or more of the objectives of the EU Taxonomy as described below or contribute to one or more of the following UN Sustainable Development Goals (SDGs):

SDG 2 - Zero Hunger  
SDG 6 - Clean Water and Sanitation  
SDG 7 - Affordable and Clean Energy  
SDG 8 - Decent Work and Economic Growth  
SDG 9 - Industry, Innovation and Infrastructure  
SDG 11 - Sustainable Cities and Communities  
SDG 12 - Responsible Consumption and Production  
SDG 13 - Climate Action  
SDG 14 - Life Below Water  
SDG 15 - Life on Land

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal. The fund may contribute to any of the environmental objectives set out in the Taxonomy Regulation, depending on the availability of feasible investment opportunities.

Environmentally sustainable activities as defined by the EU Taxonomy are linked to six environmental objectives:

1. Climate change mitigation
2. Climate change adaptation
3. The sustainable use and protection of water and marine resources
4. The transition to a circular economy
5. Pollution prevention and control
6. The protection and restoration of biodiversity and ecosystems

For each of these objectives, the EU Taxonomy provides technical screening criteria, including detailed thresholds. Alignment of the investee companies' activities with the objectives of the EU Taxonomy is identified and evaluated by use of the technical screening criteria, to the extent these have been adopted and to the extent data on the alignment of the activities of the companies is reported or available and of an adequate quality from third party data providers. Within the reporting period, alignment of investee companies' activities with the climate objectives 1. and 2. could be identified and evaluated, while the remaining objectives will be included when the technical screening criteria for these objectives are adopted by the European Commission.

Further, to be eligible for the fund's investment universe, investee companies must be classified as sustainable by NAM by contributing, through their economic activities, to a sustainable investment objective while not significantly harming any other environmental or social objective and following good governance practices.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the sustainable investment objective of the fund.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Contribution to SDG 2 - Zero Hunger	End hunger, achieve food security and improved nutrition and promote sustainable agriculture	4.04 % of financed revenue	97.54 %	96.91 %
Contribution to SDG 6 - Clean Water and Sanitation	Ensure availability and sustainable management of water and sanitation for all	3.90 % of financed revenue	97.54 %	96.91 %
Contribution to SDG 7 - Affordable and Clean Energy	Ensure access to affordable, reliable, sustainable and modern energy for all	7.83 % of financed revenue	97.54 %	96.91 %
Contribution to SDG 8 - Decent Work and Economic Growth	Promote sustained and sustainable economic growth, full and productive employment and decent work for all	7.97 % of financed revenue	97.54 %	92.35 %
Contribution to SDG 9 - Industry, Innovation and Infrastructure	Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation	23.66 % of financed revenue	97.54 %	92.35 %
Contribution to SDG 11 - Sustainable Cities and Communities	Make cities and human settlements inclusive, safe, resilient and sustainable	11.88 % of financed revenue	97.54 %	96.91 %
Contribution to SDG 12 - Responsible Consumption and Production	Ensure sustainable consumption and production patterns	7.38 % of financed revenue	97.54 %	96.91 %
Contribution to SDG 13 - Climate Action	Take urgent action to combat climate change and its impacts	2.96 % of financed revenue	97.54 %	96.91 %
Contribution to SDG 14 - Life Below Water	Conserve and sustainably use the oceans, seas and marine resources for sustainable development	-0.35 % of financed revenue	97.54 %	96.91 %
Contribution to SDG 15 - Life on Land	Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss	1.22 % of financed revenue	97.54 %	96.91 %
% of total investments in EU taxonomy aligned activities	Alignment with EU taxonomy is used to measure the share of sustainable investments with an environmental objective that is aligned with the EU Taxonomy	7.24 % alignment to EU taxonomy	97.54 %	96.70 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● ...and compared to previous periods?

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Contribution to SDG 2 - Zero Hunger	End hunger, achieve food security and improved nutrition and promote sustainable agriculture	2023	4.04 % of financed revenue	97.54 %	96.91 %

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
% of total investments in EU taxonomy aligned activities	Alignment with EU taxonomy is used to measure the share of sustainable investments with an environmental objective that is aligned with the EU Taxonomy	2023	7.24 % alignment to EU taxonomy	97.54 %	96.70 %
	Alignment with EU taxonomy is used to measure the share of sustainable investments with an environmental objective that is aligned with the EU Taxonomy	2022	4.90 % alignment to EU taxonomy	97.33 %	95.66 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments not cause significant harm to any sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

**- How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	599,467 tCO <sub>2</sub> e	97.54 %	97.54 %
		Scope 2 GHG emissions	229,313 tCO <sub>2</sub> e	97.54 %	97.54 %
		Scope 3 GHG emissions	3,684,904 tCO <sub>2</sub> e	97.54 %	97.54 %

Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.03 tons / m€ invested	97.54 %	2.06 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.43 tons / m€ invested	97.54 %	84.28 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	97.54 %	97.54 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % without policies	97.54 %	93.67 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	5.41 % pay gap	97.54 %	27.56 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	32.94 % (female directors / total directors)	97.54 %	96.80 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	97.54 %	94.06 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
1 January 2023 -  
31 December 2023

Largest investments	Sector	Assets	Country
Air Liquide	Basic Materials	3.99 %	France
Republic Services	Industrial	3.98 %	United States
Linde	Basic Materials	3.51 %	United States
Muenchener Rueckversicherungs-Gesellschaft AG in M	Financial	3.37 %	Germany
Waste Management	Industrial	3.30 %	United States
Synopsys	Technology	3.27 %	United States
Fortis Inc/Canada	Utilities	2.54 %	Canada
Roper Technologies	Technology	2.54 %	United States
Emerson Electric	Industrial	2.50 %	United States
National Grid	Utilities	2.42 %	United Kingdom
Central Japan Railway	Industrial	2.28 %	Japan
Eversource Energy	Utilities	2.24 %	United States
Chart Industries	Industrial	2.12 %	United States
ANSYS	Technology	2.07 %	United States
MasTec	Industrial	2.07 %	United States

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

### ● In which economic sectors were the investments made?

Sector	Assets
Industrial	36.90 %
Technology	20.55 %
Basic Materials	15.39 %
Utilities	9.75 %
Consumer, Non-cyclical	4.76 %
Consumer, Cyclical	4.61 %
Financial	3.86 %
Cash	2.46 %
Energy	1.72 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

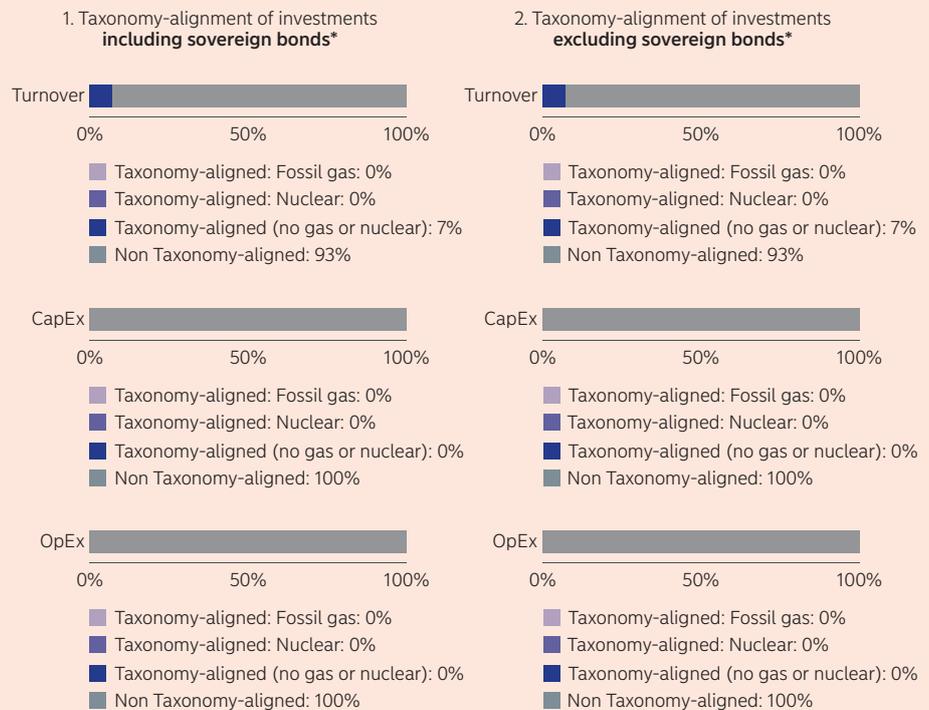

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	7.24 %
2022	4.90 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 90 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 75 %.

### What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the 'Fund Descriptions' in the prospectus. Due to the nature of the instruments, minimum environmental and social safeguards were not applicable to cash and currency hedging instruments.

### What actions have been taken to attain the sustainable investment objective during the reference period?

The binding elements of the investment strategy used to select the investments to attain the sustainable investment objective by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Global Climate Engagement Fund

**Legal entity identifier:** 549300KRLGEORNV7310

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 64 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Climate transition** The fund promoted E/S characteristics by focusing on companies that demonstrated a transition path for their business models to become aligned with the goals of the Paris agreement. Active ownership and engagement are key components in seeking to influence companies' behaviour, and to initiate and accelerate the needed transition.

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	361 tCO <sub>2</sub> e / m€ invested	97.45 %	97.45 %
	Carbon footprint Scope 1+2+3	942 tCO <sub>2</sub> e / m€ invested	97.45 %	97.45 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	97.45 %	97.45 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	361 tCO <sub>2</sub> e / m€ invested	97.45 %	97.45 %
		2022	403 tCO <sub>2</sub> e / m€ invested	94.84 %	94.84 %
	Carbon footprint Scope 1+2+3	2023	942 tCO <sub>2</sub> e / m€ invested	97.45 %	97.45 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.00 % involved in violations	97.45 %	97.45 %
		2022	0.00 % involved in violations	94.84 %	94.84 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	22,678 tCO <sub>2</sub> e	97.45 %	97.45 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Industrial	24.85 %
Basic Materials	15.02 %
Consumer, Non-cyclical	13.10 %
Utilities	12.68 %
Financial	11.47 %
Consumer, Cyclical	10.94 %
Technology	7.16 %
Cash	2.55 %
Energy	2.24 %
<b>Sum</b>	<b>100.00 %</b>

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:  
 In fossil gas       In nuclear energy  
 No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

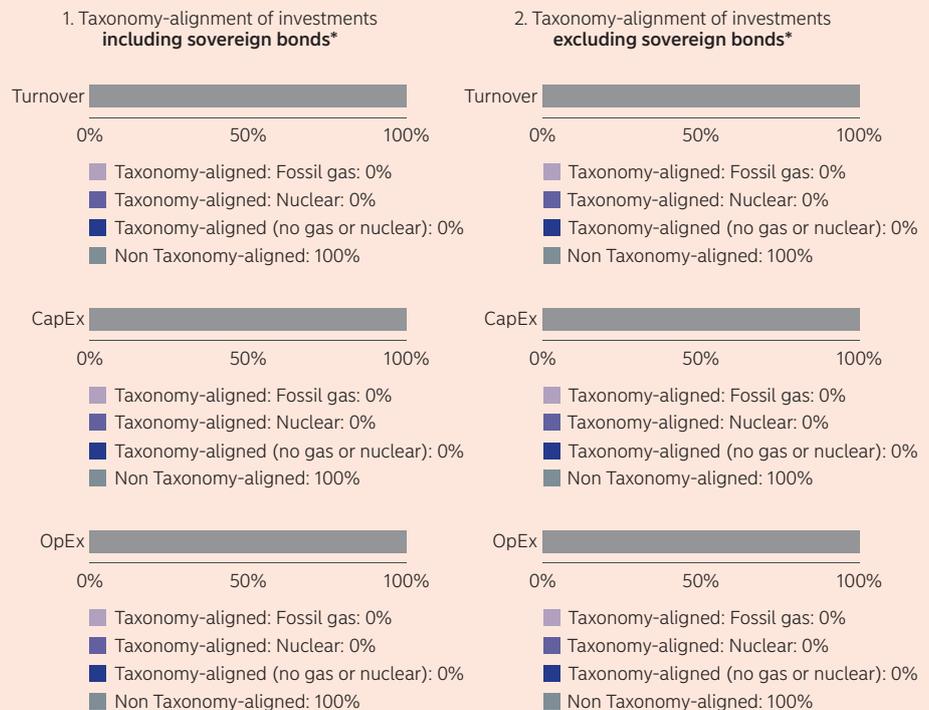

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

**The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 64 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 45 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Global Disruption Fund

**Legal entity identifier:** 549300QBQ3523WUDHH63

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 76 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	26 tCO <sub>2</sub> e / m€ invested	98.09 %	98.09 %
	Carbon footprint Scope 1+2+3	190 tCO <sub>2</sub> e / m€ invested	98.09 %	98.09 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	4.61 % involved in violations	98.09 %	98.09 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	26 tCO <sub>2</sub> e / m€ invested	98.09 %	98.09 %
		2022	27 tCO <sub>2</sub> e / m€ invested	95.52 %	95.52 %
	Carbon footprint Scope 1+2+3	2023	190 tCO <sub>2</sub> e / m€ invested	98.09 %	98.09 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	4.61 % involved in violations	98.09 %	98.09 %
		2022	4.01 % involved in violations	95.52 %	95.52 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	2,233 tCO <sub>2</sub> e	98.09 %	98.09 %
		Scope 2 GHG emissions	596 tCO <sub>2</sub> e	98.09 %	98.09 %
		Scope 3 GHG emissions	17,828 tCO <sub>2</sub> e	98.09 %	98.09 %
		Total GHG emissions Scope 1+2	2,829 tCO <sub>2</sub> e	98.09 %	98.09 %
		Total GHG emissions Scope 1+2+3	20,657 tCO <sub>2</sub> e	98.09 %	98.09 %
	Carbon footprint	Carbon footprint	26 tCO <sub>2</sub> e / m€ invested	98.09 %	98.09 %
		Carbon footprint Scope 1+2+3	190 tCO <sub>2</sub> e / m€ invested	98.09 %	98.09 %
	GHG intensity of investee companies	GHG intensity of investee companies	194 tCO <sub>2</sub> e / m€ of owned revenue	98.09 %	98.09 %
		GHG intensity of investee companies Scope 1+2+3	796 tCO <sub>2</sub> e / m€ of owned revenue	98.09 %	96.97 %
	Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	3.13 % investments in fossil fuels	98.09 %	97.06 %
	Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources	69.64 % non-renewable energy consumption	98.09 %	66.91 %
			69.49 % non-renewable energy production	98.09 %	8.68 %

## CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	Energy consumption intensity per high impact climate sector	Agriculture forestry and fishing (A)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Mining and quarrying (B)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Manufacturing (C)	0.20 GWh / m€ of revenue	34.27 %	33.04 %
		Electricity gas steam and air conditioning supply (D)	5.14 GWh / m€ of revenue	8.68 %	8.68 %
		Water supply sewerage waste management and remediation activities (E)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Construction (F)	0.09 GWh / m€ of revenue	1.20 %	1.20 %
		Wholesale and retail trade repair of motor vehicles and motorcycles (G)	0.10 GWh / m€ of revenue	15.02 %	14.77 %
		Transportation and storage (H)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Real estate activities (L)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Biodiversity	Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas	1.21 % with negative impact
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.01 tons / m€ invested	98.09 %	0.85 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.15 tons / m€ invested	98.09 %	81.70 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	4.61 % involved in violations	98.09 %	98.09 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.96 % without policies	98.09 %	90.96 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	6.25 % pay gap	98.09 %	37.61 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	33.53 % (female directors / total directors)	98.09 %	96.29 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	98.09 %	97.93 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

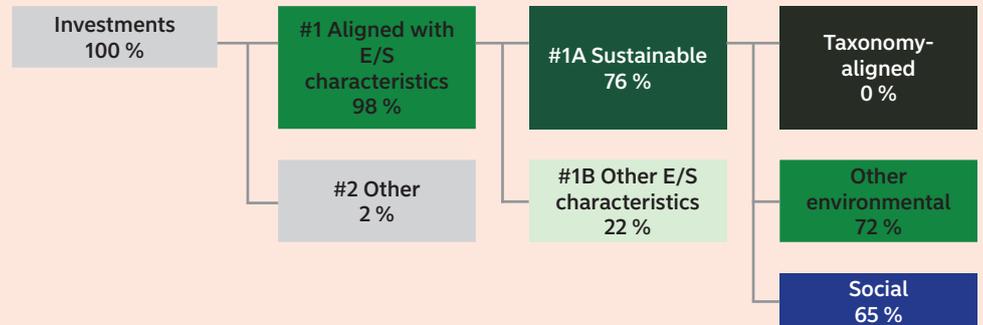

Largest investments	Sector	Assets	Country
Amazon.com	Communications	4.61 %	United States
NextEra Energy	Utilities	3.95 %	United States
Progressive	Financial	3.93 %	United States
T-Mobile US	Communications	3.58 %	United States
HDFC Bank ADR	Financial	3.38 %	India
Fortis Inc/Canada	Utilities	2.99 %	Canada
TJX Cos	Consumer, Cyclical	2.93 %	United States
Taiwan Semiconductor Manufacturing ADR	Technology	2.70 %	Taiwan, Province of China
Pan Pacific International Holdings	Consumer, Cyclical	2.70 %	Japan
Kerry Group	Consumer, Non-cyclical	2.67 %	Ireland
Tradeweb Markets	Financial	2.59 %	United States
Emerson Electric	Industrial	2.24 %	United States
Novo Nordisk B	Consumer, Non-cyclical	2.15 %	Denmark
Hexcel	Industrial	2.12 %	United States
PayPal Holdings	Consumer, Non-cyclical	2.02 %	United States

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Industrial	17.65 %
Technology	16.90 %
Consumer, Non-cyclical	16.74 %
Financial	13.30 %
Communications	12.14 %
Utilities	8.68 %
Consumer, Cyclical	8.46 %
Basic Materials	4.23 %
Cash	1.91 %
<b>Sum</b>	<b>100.00 %</b>

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

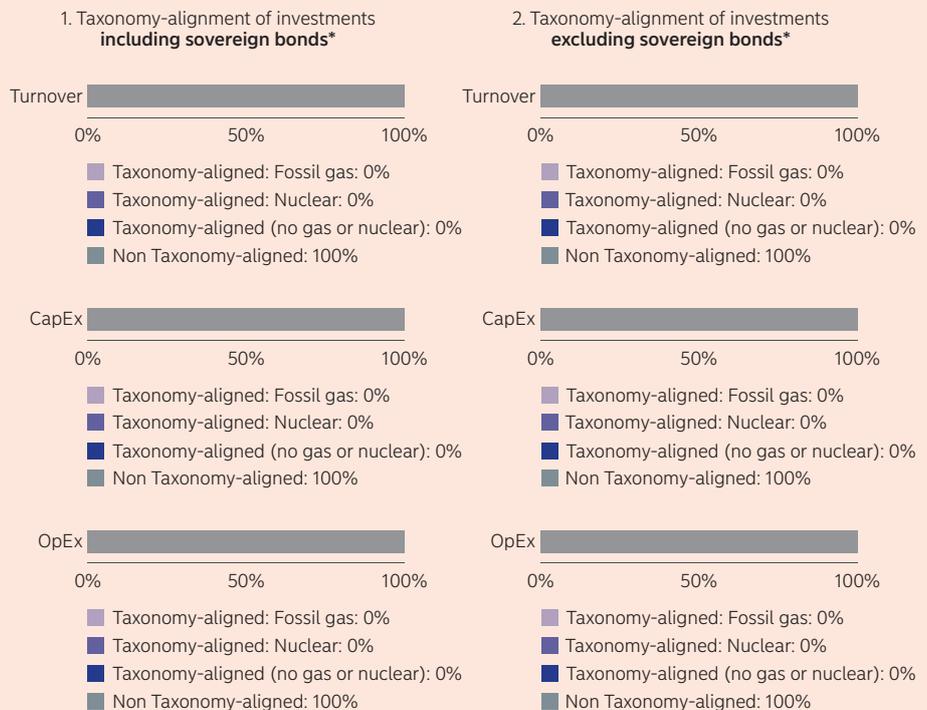

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:  
 In fossil gas       In nuclear energy  
 No

**The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 72 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 65 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - Global Diversity Engagement Fund

**Legal entity identifier:** 549300CYWEG7M5HTOM84

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 80 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Promoting diversity** The fund promoted E/S characteristics by focusing on companies that met the investment manager's expectations on diversity or were working actively to improve in one or several diversity areas. The data that was available was predominantly related to gender equality and gender diversity. As data quality and availability evolve, the strategy may gradually be able to formally adopt a broader range of diversity indicators such as ethnicity, age and socioeconomic status.

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	97.61 %	97.61 %
Executive level diversity	Average percentage of female at executive level in investee companies	31.61 % of total	97.68 %	87.56 %
Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	38.12 % (female directors / total directors)	97.61 %	97.61 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	8,601 tCO <sub>2</sub> e	97.61 %	97.61 %
		Scope 2 GHG emissions	3,832 tCO <sub>2</sub> e	97.61 %	97.61 %
		Scope 3 GHG emissions	63,969 tCO <sub>2</sub> e	97.61 %	97.61 %
		Total GHG emissions Scope 1+2	12,433 tCO <sub>2</sub> e	97.61 %	97.61 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Consumer, Non-cyclical	24.79 %
Technology	22.54 %
Financial	17.21 %
Consumer, Cyclical	12.32 %
Communications	7.67 %
Industrial	6.53 %
Basic Materials	3.96 %
Utilities	2.59 %
Cash	2.39 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

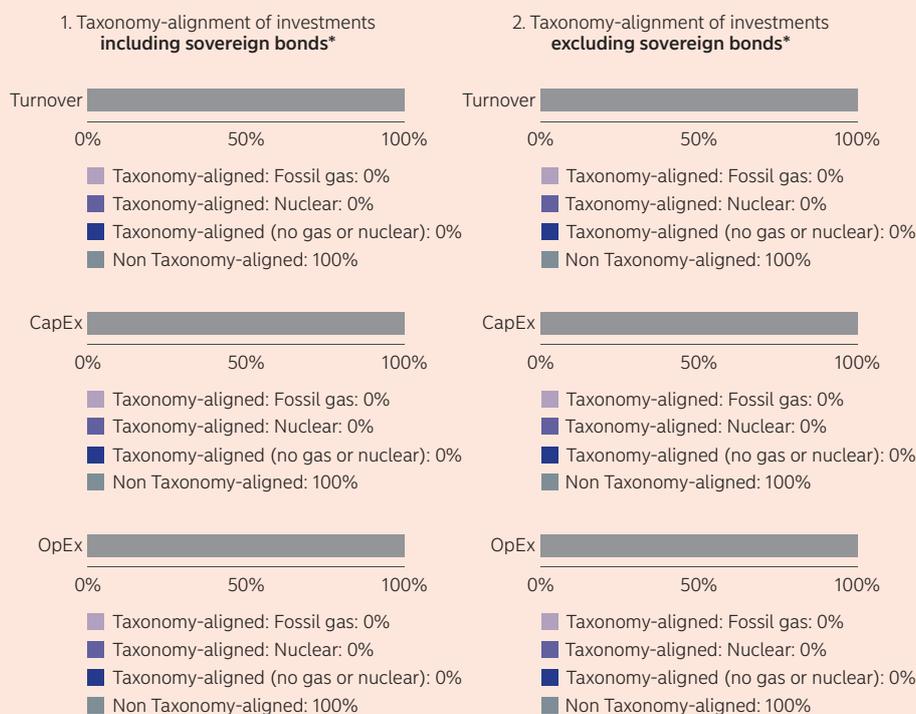

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 64 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 76 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Global Equity Market Neutral Fund

**Legal entity identifier:** 5493003GMR3L3V7UKR92

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 74 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	30 tCO <sub>2</sub> e / m€ invested	92.91 %	92.91 %
	Carbon footprint Scope 1+2+3	188 tCO <sub>2</sub> e / m€ invested	92.91 %	92.91 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	1.01 % involved in violations	92.91 %	91.78 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	30 tCO <sub>2</sub> e / m€ invested	92.91 %	92.91 %
		2022	58 tCO <sub>2</sub> e / m€ invested	80.74 %	80.74 %
	Carbon footprint Scope 1+2+3	2023	188 tCO <sub>2</sub> e / m€ invested	92.91 %	92.91 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	1.01 % involved in violations	92.91 %	91.78 %
		2022	-0.70 % involved in violations	14.16 %	14.01 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**What were the top investments of this financial product?**

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 70 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 71 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the 'Fund Descriptions' in the prospectus. To the extent that derivatives were used to take short positions in the equity market, these positions were not subject to the same ESG criteria that apply to direct equity investments and long positions in derivatives. Any long positions in derivatives were subject to the same ESG criteria as direct equity investments. This category may also have included securities for which relevant data is not available.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Global Impact Fund

**Legal entity identifier:** 549300M3BNRUZQFIEE11

### Sustainable investment objective

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** 90 %

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** 81 %

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent was the sustainable investment objective of this financial product met?

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

The sustainable investment objective of the fund was to support the 2030 Agenda for Sustainable Development adopted by the UN, by investing in companies that contribute to one or more of the objectives of the EU Taxonomy as described below or contribute to one or more of the following UN Sustainable Development Goals (SDGs):

- SDG 1 - No Poverty
- SDG 2 - Zero Hunger
- SDG 3 - Good Health and Well-being
- SDG 4 - Quality Education
- SDG 5 - Gender Equality
- SDG 6 - Clean Water and Sanitation
- SDG 7 - Affordable and Clean Energy
- SDG 8 - Decent Work and Economic Growth
- SDG 9 - Industry, Innovation and Infrastructure
- SDG 10 - Reduced Inequality
- SDG 11 - Sustainable Cities and Communities
- SDG 12 - Responsible Consumption and Production
- SDG 13 - Climate Action
- SDG 14 - Life Below Water
- SDG 15 - Life on Land
- SDG 16 - Peace and Justice Strong Institutions
- SDG 17 - Partnerships to achieve the Goal

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal. The fund may contribute to any of the environmental objectives set out in the Taxonomy Regulation, depending on the availability of feasible investment opportunities.

Environmentally sustainable activities as defined by the EU Taxonomy are linked to six environmental objectives:

1. Climate change mitigation
2. Climate change adaptation
3. The sustainable use and protection of water and marine resources
4. The transition to a circular economy
5. Pollution prevention and control
6. The protection and restoration of biodiversity and ecosystems

For each of these objectives, the EU Taxonomy provides technical screening criteria, including detailed thresholds. Alignment of the investee companies' activities with the objectives of the EU Taxonomy is identified and evaluated by use of the technical screening criteria, to the extent these have been adopted and to the extent data on the alignment of the activities of the companies is reported or available and of an adequate quality from third party data providers. Within the reporting period, alignment of investee companies' activities with the climate objectives 1. and 2. could be identified and evaluated, while the remaining objectives will be included when the technical screening criteria for these objectives are adopted by the European Commission.

Further, to be eligible for the fund's investment universe, investee companies must be classified as sustainable by NAM by contributing, through their economic activities, to a sustainable investment objective while not significantly harming any other environmental or social objective and following good governance practices.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the sustainable investment objective of the fund.

● **How did the sustainability indicators perform?**

<b>Sustainability Indicator</b>	<b>Metric</b>	<b>Metric Value</b>	<b>Eligibility</b>	<b>Coverage</b>
Contribution to SDG 1 - No poverty	End poverty in all its forms everywhere	4.06 % of financed revenue	97.82 %	96.74 %
Contribution to SDG 2 - Zero Hunger	End hunger, achieve food security and improved nutrition and promote sustainable agriculture	2.08 % of financed revenue	97.82 %	96.74 %
Contribution to SDG 3 - Good Health and Well-being	Ensure healthy lives and promote well-being for all at all ages	13.71 % of financed revenue	97.82 %	96.74 %
Contribution to SDG 4 - Quality Education	Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all	4.07 % of financed revenue	97.82 %	96.74 %
Contribution to SDG 5 - Gender Equality	Achieve gender equality and empower all women and girls	0.80 % of financed revenue	97.82 %	96.74 %
Contribution to SDG 6 - Clean Water and Sanitation	Ensure availability and sustainable management of water and sanitation for all	9.31 % of financed revenue	97.82 %	96.74 %
Contribution to SDG 7 - Affordable and Clean Energy	Ensure access to affordable, reliable, sustainable and modern energy for all	6.87 % of financed revenue	97.82 %	96.74 %
Contribution to SDG 8 - Decent Work and Economic Growth	Promote sustained and sustainable economic growth, full and productive employment and decent work for all	9.93 % of financed revenue	97.82 %	92.57 %
Contribution to SDG 9 - Industry, Innovation and Infrastructure	Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation	23.49 % of financed revenue	97.82 %	92.57 %
Contribution to SDG 10 - Reduced Inequality	Reduce inequality within and among countries	4.28 % of financed revenue	97.82 %	96.74 %
Contribution to SDG 11 - Sustainable Cities and Communities	Make cities and human settlements inclusive, safe, resilient and sustainable	11.16 % of financed revenue	97.82 %	96.74 %
Contribution to SDG 12 - Responsible Consumption and Production	Ensure sustainable consumption and production patterns	3.69 % of financed revenue	97.82 %	96.74 %
Contribution to SDG 13 - Climate Action	Take urgent action to combat climate change and its impacts	3.17 % of financed revenue	97.82 %	96.74 %

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Contribution to SDG 14 - Life Below Water	Conserve and sustainably use the oceans, seas and marine resources for sustainable development	-0.17 % of financed revenue	97.82 %	96.74 %
Contribution to SDG 15 - Life on Land	Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss	-0.10 % of financed revenue	97.82 %	96.74 %
Contribution to SDG 16 - Peace, Justice and Strong Institutions	Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels	1.14 % of financed revenue	97.82 %	96.74 %
Contribution to SDG 17 - Partnerships for the Goals	Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development	0.00 % of financed revenue	97.82 %	92.57 %
% of total investments in EU taxonomy aligned activities	Alignment with EU taxonomy is used to measure the share of sustainable investments with an environmental objective that is aligned with the EU Taxonomy	5.93 % alignment to EU taxonomy	97.82 %	96.94 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● ...and compared to previous periods?

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage

		2022	N/A	N/A	N/A
% of total investments in EU taxonomy aligned activities	Alignment with EU taxonomy is used to measure the share of sustainable investments with an environmental objective that is aligned with the EU Taxonomy	2023	5.93 % alignment to EU taxonomy	97.82 %	96.94 %
	Alignment with EU taxonomy is used to measure the share of sustainable investments with an environmental objective that is aligned with the EU Taxonomy	2022	3.61 % alignment to EU taxonomy	97.41 %	97.13 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	6,866 tCO <sub>2</sub> e	97.82 %	97.77 %
		Scope 2 GHG emissions	3,370 tCO <sub>2</sub> e	97.82 %	97.77 %
		Scope 3 GHG emissions	46,518 tCO <sub>2</sub> e	97.82 %	97.77 %
		Total GHG emissions Scope 1+2	10,236 tCO <sub>2</sub> e	97.82 %	97.77 %

		GHG intensity of investee companies Scope 1+2+3	1,040 tCO <sub>2</sub> e / m€ of owned revenue	97.82 %	96.24 %
	Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	4.53 % investments in fossil fuels	97.82 %	96.98 %
	Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources	80.04 % non-renewable energy consumption	97.82 %	76.30 %
			70.77 % non-renewable energy production	97.82 %	4.06 %

## CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	Energy consumption intensity per high impact climate sector	Agriculture forestry and fishing (A)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Mining and quarrying (B)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Manufacturing (C)	0.76 GWh / m€ of revenue	42.63 %	41.96 %
		Electricity gas steam and air conditioning supply (D)	0.95 GWh / m€ of revenue	6.23 %	6.23 %
		Water supply sewerage waste management and remediation activities (E)	0.75 GWh / m€ of revenue	5.12 %	5.12 %
		Construction (F)	0.16 GWh / m€ of revenue	4.79 %	4.79 %
		Wholesale and retail trade repair of motor vehicles and motorcycles (G)	0.07 GWh / m€ of revenue	3.20 %	3.20 %
		Transportation and storage (H)	0.33 GWh / m€ of revenue	2.84 %	2.84 %
		Real estate activities (L)	0.13 GWh / m€ of revenue	0.61 %	0.32 %
		Biodiversity	Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas	0.00 % with negative impact
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.00 tons / m€ invested	97.82 %	1.06 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.20 tons / m€ invested	97.82 %	83.96 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	97.82 %	97.82 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.32 % without policies	97.82 %	92.00 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	4.18 % pay gap	97.82 %	29.73 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	33.02 % (female directors / total directors)	97.82 %	96.91 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	97.82 %	95.28 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

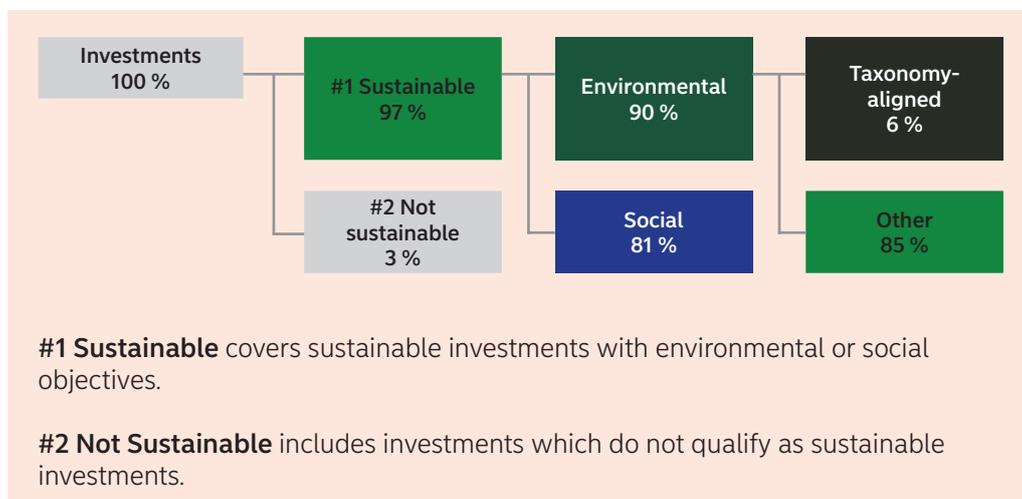

Largest investments	Sector	Assets	Country
Air Liquide	Basic Materials	3.50 %	France
Linde	Basic Materials	3.09 %	United States
Central Japan Railway	Industrial	2.84 %	Japan
Synopsys	Technology	2.74 %	United States
Republic Services	Industrial	2.71 %	United States
Motorola Solutions	Communications	2.46 %	United States
Waste Management	Industrial	2.42 %	United States
Fortis Inc/Canada	Utilities	2.36 %	Canada
Bank Rakyat Indonesia Persero	Financial	2.23 %	Indonesia
Vinci	Industrial	2.20 %	France
Eversource Energy	Utilities	2.17 %	United States
Muenchener Rueckversicherungs-Gesellschaft AG in M	Financial	2.15 %	Germany
Chart Industries	Industrial	2.09 %	United States
AlA Group	Financial	2.07 %	Hong Kong
Danaher	Consumer, Non-cyclical	2.06 %	United States

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

### ● In which economic sectors were the investments made?

Sector	Assets
Industrial	25.46 %
Consumer, Non-cyclical	16.51 %
Technology	14.51 %
Financial	12.33 %
Basic Materials	10.72 %
Communications	6.23 %
Utilities	6.23 %
Consumer, Cyclical	4.09 %
Cash	2.18 %
Energy	1.74 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

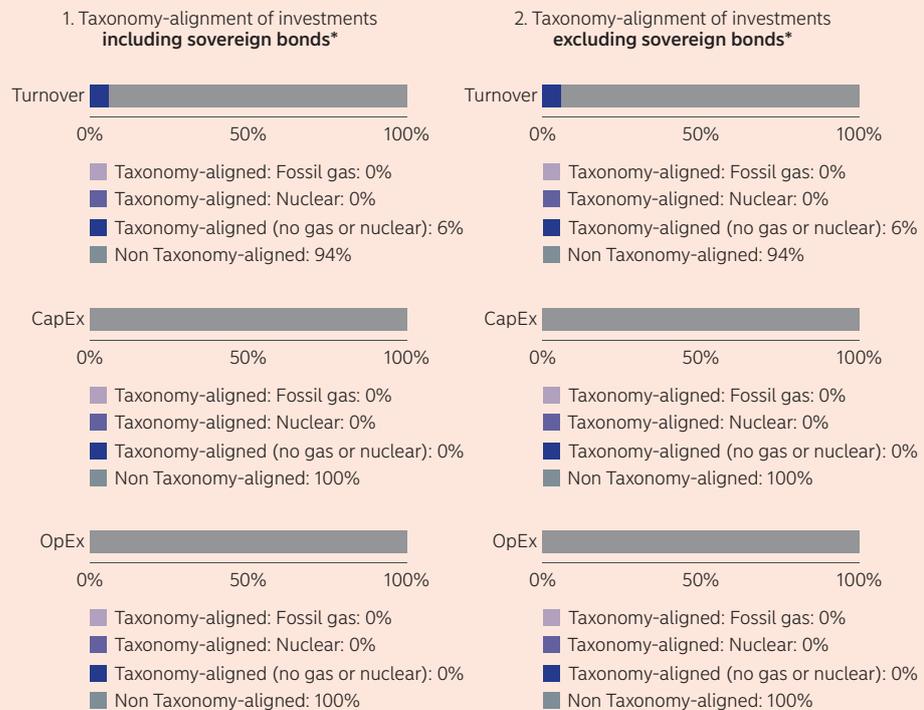

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	5.93 %
2022	3.61 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 85 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 81 %.

### What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the 'Fund Descriptions' in the prospectus. Due to the nature of the instruments, minimum environmental and social safeguards were not applicable to cash and currency hedging instruments.

### What actions have been taken to attain the sustainable investment objective during the reference period?

The binding elements of the investment strategy used to select the investments to attain the sustainable investment objective by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Global Listed infrastructure Fund

**Legal entity identifier:** 5493004U7E2YIFAGEE77

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 78 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	198 tCO <sub>2</sub> e / m€ invested	98.72 %	98.72 %
	Carbon footprint Scope 1+2+3	422 tCO <sub>2</sub> e / m€ invested	98.72 %	98.72 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	98.72 %	98.72 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● *...and compared to previous periods?*

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	198 tCO <sub>2</sub> e / m€ invested	98.72 %	98.72 %
		2022	241 tCO <sub>2</sub> e / m€ invested	98.49 %	97.42 %
	Carbon footprint Scope 1+2+3	2023	422 tCO <sub>2</sub> e / m€ invested	98.72 %	98.72 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.00 % involved in violations	98.72 %	98.72 %
		2022	0.00 % involved in violations	98.49 %	98.49 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The "do no significant harm" principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	75,691 tCO <sub>2</sub> e	98.72 %	98.72 %
		Scope 2 GHG emissions	3,532 tCO <sub>2</sub> e	98.72 %	98.72 %
		Scope 3 GHG emissions	89,980 tCO <sub>2</sub> e	98.72 %	98.72 %
		Total GHG emissions Scope 1+2	79,223 tCO <sub>2</sub> e	98.72 %	98.72 %
		Total GHG emissions Scope 1+2+3	169,202 tCO <sub>2</sub> e	98.72 %	98.72 %
	Carbon footprint	Carbon footprint	198 tCO <sub>2</sub> e / m€ invested	98.72 %	98.72 %
		Carbon footprint Scope 1+2+3	422 tCO <sub>2</sub> e / m€ invested	98.72 %	98.72 %
	GHG intensity of investee companies	GHG intensity of investee companies	1,103 tCO <sub>2</sub> e / m€ of owned revenue	98.72 %	98.72 %
		GHG intensity of investee companies Scope 1+2+3	1,900 tCO <sub>2</sub> e / m€ of owned revenue	98.72 %	98.72 %
	Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	42.45 % investments in fossil fuels	98.72 %	97.75 %
	Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies	85.66 % non-renewable energy consumption	98.72 %	45.50 %
		Share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources	74.97 % non-renewable energy production	98.72 %	45.32 %

## CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	Energy consumption intensity per high impact climate sector	Agriculture forestry and fishing (A)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Mining and quarrying (B)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Manufacturing (C)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Electricity gas steam and air conditioning supply (D)	5.57 GWh / m€ of revenue	46.94 %	45.63 %
		Water supply sewerage waste management and remediation activities (E)	1.12 GWh / m€ of revenue	2.07 %	1.65 %
		Construction (F)	0.33 GWh / m€ of revenue	9.66 %	9.66 %
		Wholesale and retail trade repair of motor vehicles and motorcycles (G)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Transportation and storage (H)	0.65 GWh / m€ of revenue	23.38 %	23.38 %
		Real estate activities (L)	0.25 GWh / m€ of revenue	8.80 %	8.80 %
Biodiversity	Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas	2.12 % with negative impact	98.72 %	97.75 %
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.03 tons / m€ invested	98.72 %	0.94 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.25 tons / m€ invested	98.72 %	86.93 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	98.72 %	98.72 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.66 % without policies	98.72 %	95.52 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	3.03 % pay gap	98.72 %	25.72 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	35.17 % (female directors / total directors)	98.72 %	98.72 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	98.72 %	98.72 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

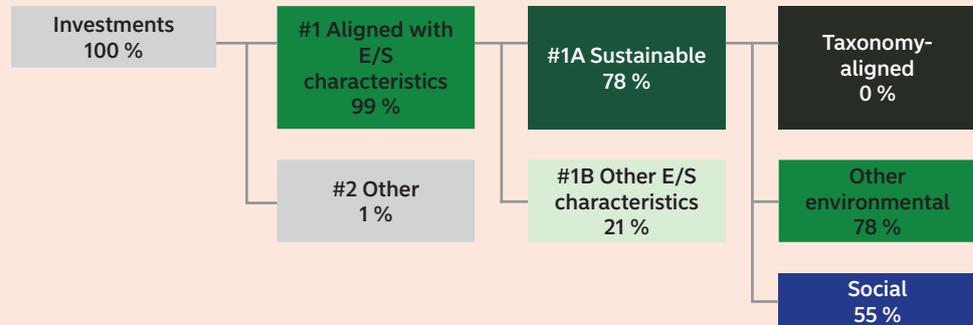

Largest investments	Sector	Assets	Country
NextEra Energy	Utilities	5.27 %	United States
American Tower	Financial	5.21 %	United States
Transurban	Consumer, Non-cyclical	4.75 %	Australia
Aena SME	Industrial	4.46 %	Spain
Cellnex Telecom	Industrial	4.22 %	Spain
Vinci	Industrial	4.01 %	France
WEC Energy Group	Utilities	4.00 %	United States
Sempra	Utilities	3.30 %	United States
Central Japan Railway	Industrial	3.11 %	Japan
National Grid	Utilities	3.01 %	United Kingdom
Atlas Arteria	Consumer, Non-cyclical	2.91 %	Australia
Southern	Utilities	2.91 %	United States

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Utilities	48.02 %
Industrial	29.56 %
Financial	11.31 %
Consumer, Non-cyclical	7.66 %
Cash	1.27 %
Communications	1.20 %
Energy	0.97 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

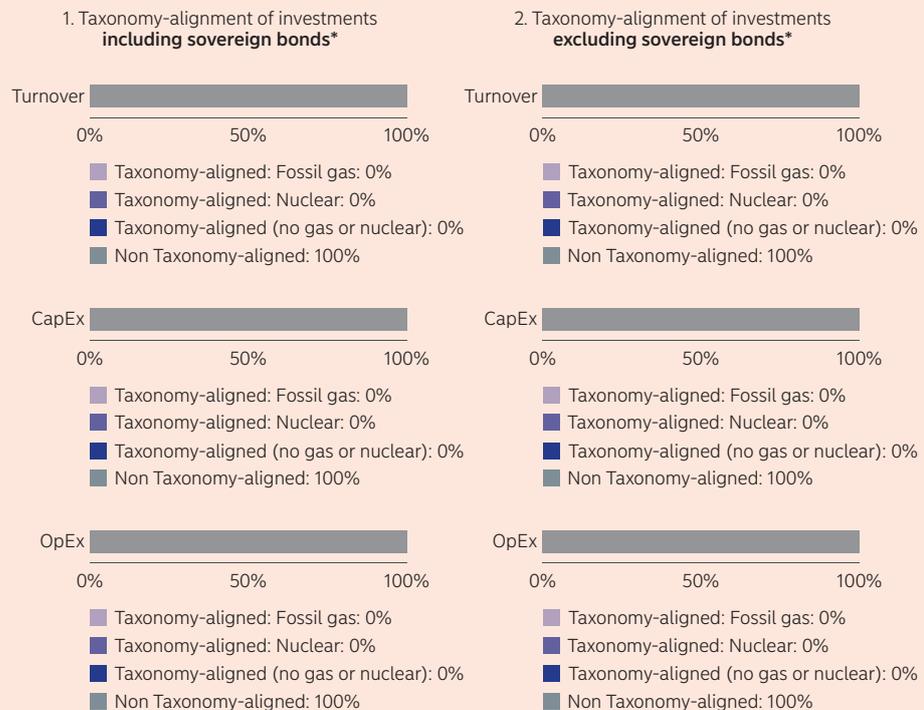

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 78 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 55 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - Global Opportunity Fund

**Legal entity identifier:** 5493007ZLSPI26CQLO03

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 74 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	14 tCO <sub>2</sub> e / m€ invested	98.93 %	98.85 %
	Carbon footprint Scope 1+2+3	150 tCO <sub>2</sub> e / m€ invested	98.93 %	98.85 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	4.79 % involved in violations	98.93 %	98.93 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	14 tCO <sub>2</sub> e / m€ invested	98.93 %	98.85 %
		2022	13 tCO <sub>2</sub> e / m€ invested	99.10 %	99.10 %
	Carbon footprint Scope 1+2+3	2023	150 tCO <sub>2</sub> e / m€ invested	98.93 %	98.85 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	4.79 % involved in violations	98.93 %	98.93 %
		2022	4.11 % involved in violations	99.10 %	99.10 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	1,895 tCO <sub>2</sub> e	98.93 %	98.85 %
		Scope 2 GHG emissions	2,516 tCO <sub>2</sub> e	98.93 %	98.85 %

	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	98.93 %	98.93 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

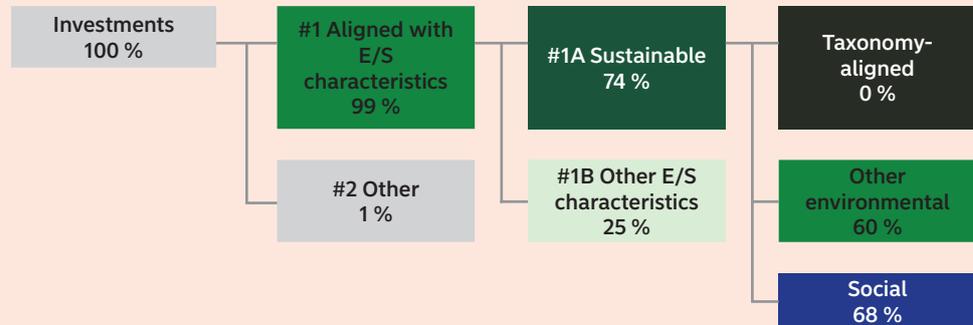

Largest investments	Sector	Assets	Country
Amazon.com	Communications	4.79 %	United States
S&P Global	Consumer, Non-cyclical	4.47 %	United States
Alphabet	Communications	4.41 %	United States
ASML Holding	Technology	4.20 %	Netherlands
Mastercard	Financial	4.11 %	United States
Airbnb	Communications	3.77 %	United States
Accenture	Technology	3.75 %	Ireland
Atlas Copco A	Industrial	3.63 %	Sweden
UnitedHealth Group	Consumer, Non-cyclical	3.53 %	United States
Linde	Basic Materials	3.51 %	United States
LVMH Moet Hennessy Louis Vuitton	Consumer, Cyclical	3.45 %	France
Home Depot	Consumer, Cyclical	3.45 %	United States

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Technology	26.26 %
Consumer, Cyclical	15.75 %
Consumer, Non-cyclical	14.83 %
Communications	12.97 %
Financial	12.63 %
Industrial	12.28 %
Basic Materials	4.22 %
Cash	1.07 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

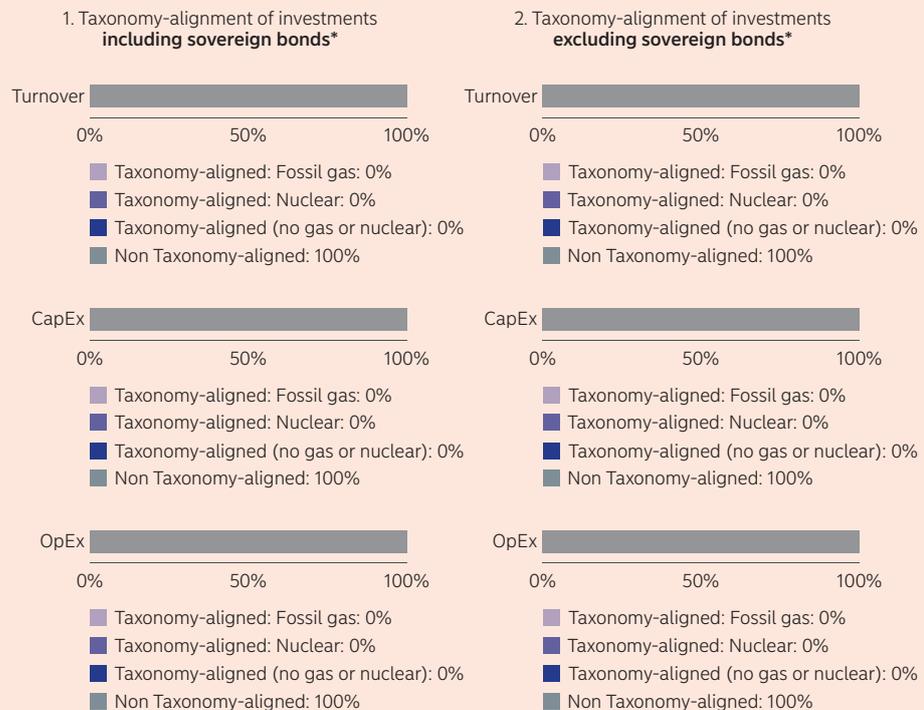

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 60 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 68 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Global Portfolio Fund

**Legal entity identifier:** 549300IV7X5KFCXHUU46

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 76 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	28 tCO <sub>2</sub> e / m€ invested	97.42 %	97.42 %
	Carbon footprint Scope 1+2+3	175 tCO <sub>2</sub> e / m€ invested	97.42 %	97.42 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	3.98 % involved in violations	97.42 %	97.42 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	28 tCO <sub>2</sub> e / m€ invested	97.42 %	97.42 %
		2022	33 tCO <sub>2</sub> e / m€ invested	97.65 %	97.65 %
	Carbon footprint Scope 1+2+3	2023	175 tCO <sub>2</sub> e / m€ invested	97.42 %	97.42 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	3.98 % involved in violations	97.42 %	97.42 %
		2022	3.75 % involved in violations	97.65 %	97.65 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The "do no significant harm" principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	9,116 tCO <sub>2</sub> e	97.42 %	97.42 %
		Scope 2 GHG emissions	1,529 tCO <sub>2</sub> e	97.42 %	97.42 %
		Scope 3 GHG emissions	54,800 tCO <sub>2</sub> e	97.42 %	97.42 %
		Total GHG emissions Scope 1+2	10,645 tCO <sub>2</sub> e	97.42 %	97.42 %
		Total GHG emissions Scope 1+2+3	65,444 tCO <sub>2</sub> e	97.42 %	97.42 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Consumer, Non-cyclical	28.98 %
Technology	22.44 %
Financial	14.65 %
Industrial	9.26 %
Communications	8.49 %
Consumer, Cyclical	7.28 %
Basic Materials	3.98 %
Cash	2.58 %
Utilities	2.33 %
<b>Sum</b>	<b>100.00 %</b>

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

- Yes:
  - In fossil gas
  - In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

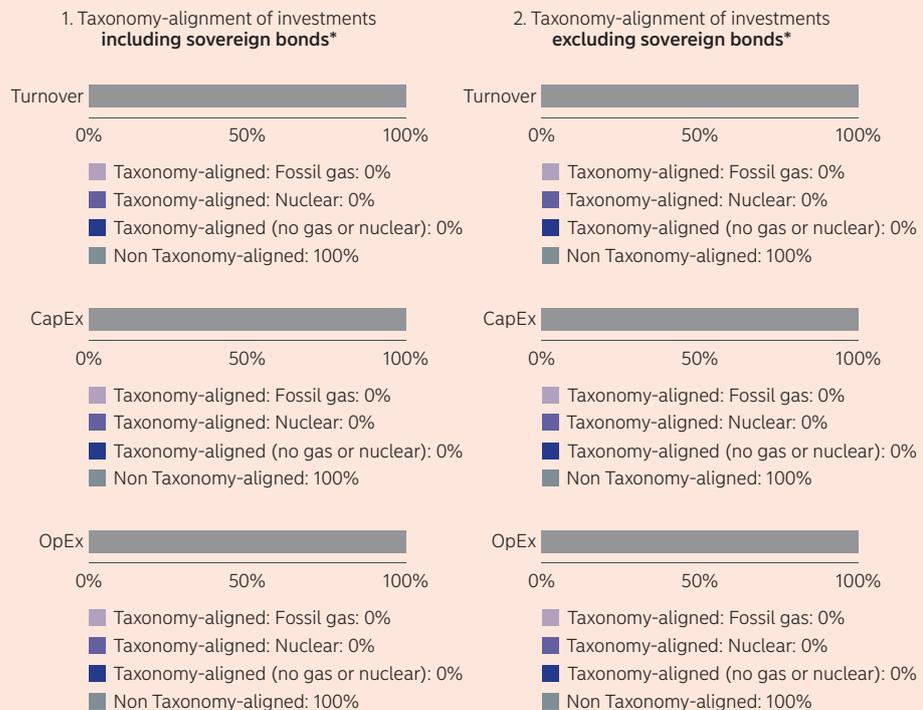

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 58 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 66 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - Global Real Estate Fund

**Legal entity identifier:** 549300E0SPFUFDUAIG67

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 86 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	8 tCO <sub>2</sub> e / m€ invested	99.04 %	99.04 %
	Carbon footprint Scope 1+2+3	31 tCO <sub>2</sub> e / m€ invested	99.04 %	99.04 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	99.04 %	97.71 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	8 tCO <sub>2</sub> e / m€ invested	99.04 %	99.04 %
		2022	7 tCO <sub>2</sub> e / m€ invested	99.32 %	99.32 %
	Carbon footprint Scope 1+2+3	2023	31 tCO <sub>2</sub> e / m€ invested	99.04 %	99.04 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.00 % involved in violations	99.04 %	97.71 %
		2022	0.00 % involved in violations	99.32 %	98.11 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	847 tCO <sub>2</sub> e	99.04 %	99.04 %
		Scope 2 GHG emissions	4,264 tCO <sub>2</sub> e	99.04 %	99.04 %
		Scope 3 GHG emissions	16,167 tCO <sub>2</sub> e	99.04 %	99.04 %
		Total GHG emissions Scope 1+2	5,111 tCO <sub>2</sub> e	99.04 %	99.04 %
		Total GHG emissions Scope 1+2+3	21,277 tCO <sub>2</sub> e	99.04 %	99.04 %
	Carbon footprint	Carbon footprint	8 tCO <sub>2</sub> e / m€ invested	99.04 %	99.04 %
		Carbon footprint Scope 1+2+3	31 tCO <sub>2</sub> e / m€ invested	99.04 %	99.04 %
	GHG intensity of investee companies	GHG intensity of investee companies	94 tCO <sub>2</sub> e / m€ of owned revenue	99.04 %	99.04 %
		GHG intensity of investee companies Scope 1+2+3	382 tCO <sub>2</sub> e / m€ of owned revenue	99.04 %	98.99 %
	Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	0.00 % investments in fossil fuels	99.04 %	96.48 %
	Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies	80.24 % non-renewable energy consumption	99.04 %	75.35 %
		Share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources	0.00 % non-renewable energy production	99.04 %	0.00 %

## CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	Energy consumption intensity per high impact climate sector	Agriculture forestry and fishing (A)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Mining and quarrying (B)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Manufacturing (C)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Electricity gas steam and air conditioning supply (D)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Water supply sewerage waste management and remediation activities (E)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Construction (F)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Wholesale and retail trade repair of motor vehicles and motorcycles (G)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Transportation and storage (H)	0.16 GWh / m€ of revenue	0.11 %	0.11 %
		Real estate activities (L)	0.36 GWh / m€ of revenue	92.72 %	88.01 %
Biodiversity	Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas	0.00 % with negative impact	99.04 %	94.35 %
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.00 tons / m€ invested	99.04 %	0.00 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.01 tons / m€ invested	99.04 %	68.52 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	99.04 %	97.71 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % without policies	99.04 %	94.86 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	11.21 % pay gap	99.04 %	29.22 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	33.15 % (female directors / total directors)	99.04 %	97.47 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	99.04 %	95.67 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

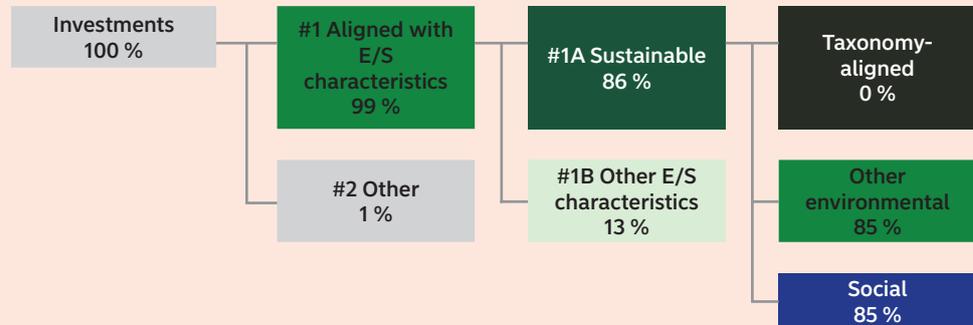

Largest investments	Sector	Assets	Country
Prologis	Financial	8.58 %	United States
Equinix	Financial	5.22 %	United States
Welltower	Financial	3.77 %	United States
Sun Communities	Financial	3.57 %	United States
VICI Properties	Financial	3.08 %	United States
Mitsubishi Estate	Financial	2.93 %	Japan
Ventas	Financial	2.86 %	United States
Realty Income	Financial	2.81 %	United States
Public Storage	Financial	2.81 %	United States
CubeSmart	Financial	2.57 %	United States
Digital Realty Trust	Financial	2.56 %	United States
American Homes 4 Rent	Financial	2.43 %	United States
Mid-America Apartment Communities	Financial	2.33 %	United States
UNITE Group	Financial	2.21 %	United Kingdom
AvalonBay Communities	Financial	2.02 %	United States

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

### ● In which economic sectors were the investments made?

Sector	Assets
Financial	97.87 %
Cash	0.96 %
Communications	0.94 %
Consumer, Non-cyclical	0.24 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

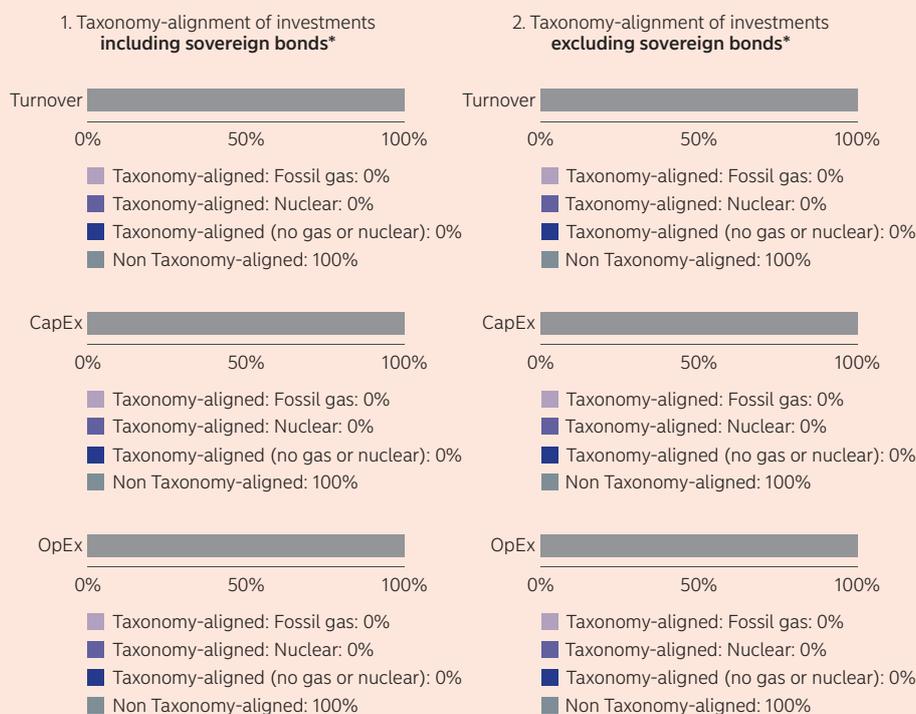

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 85 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 85 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Global Small Cap Fund

**Legal entity identifier:** 549300WUFX1G5UGCGP20

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 42 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	40 tCO <sub>2</sub> e / m€ invested	97.74 %	94.65 %
	Carbon footprint Scope 1+2+3	512 tCO <sub>2</sub> e / m€ invested	97.74 %	92.76 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	97.74 %	95.11 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	40 tCO <sub>2</sub> e / m€ invested	97.74 %	94.65 %
		2022	38 tCO <sub>2</sub> e / m€ invested	98.07 %	92.99 %
	Carbon footprint Scope 1+2+3	2023	512 tCO <sub>2</sub> e / m€ invested	97.74 %	92.76 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.00 % involved in violations	97.74 %	95.11 %
		2022	0.00 % involved in violations	98.07 %	95.67 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	4,735 tCO <sub>2</sub> e	97.74 %	94.65 %
		Scope 2 GHG emissions	3,277 tCO <sub>2</sub> e	97.74 %	94.65 %
		Scope 3 GHG emissions	94,251 tCO <sub>2</sub> e	97.74 %	92.76 %
		Total GHG emissions Scope 1+2	8,012 tCO <sub>2</sub> e	97.74 %	94.65 %
		Total GHG emissions Scope 1+2+3	102,278 tCO <sub>2</sub> e	97.74 %	92.76 %

		Electricity gas steam and air conditioning supply (D)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Water supply sewerage waste management and remediation activities (E)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Construction (F)	0.02 GWh / m€ of revenue	4.72 %	4.72 %
		Wholesale and retail trade repair of motor vehicles and motorcycles (G)	0.02 GWh / m€ of revenue	11.15 %	7.90 %
		Transportation and storage (H)	0.01 GWh / m€ of revenue	0.10 %	0.10 %
		Real estate activities (L)	0.44 GWh / m€ of revenue	0.86 %	0.86 %
		Biodiversity	Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas	0.00 % with negative impact
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.02 tons / m€ invested	97.74 %	1.37 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	2.92 tons / m€ invested	97.74 %	79.55 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	97.74 %	95.11 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	1.40 % without policies	97.74 %	76.70 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	13.70 % pay gap	97.74 %	14.21 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	27.27 % (female directors / total directors)	97.74 %	90.83 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	97.74 %	96.74 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

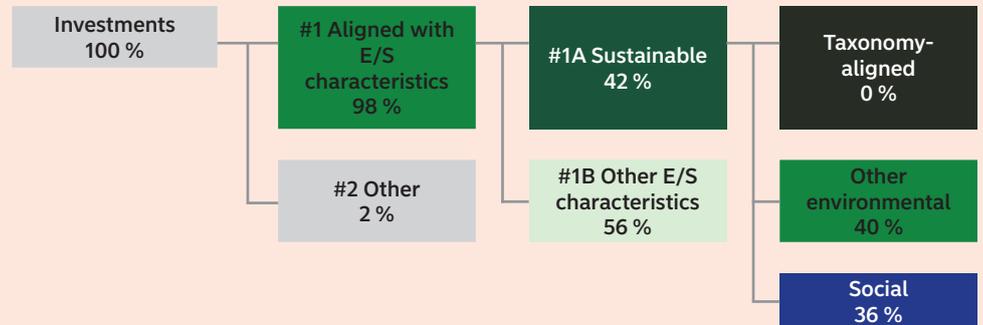

Largest investments	Sector	Assets	Country
Kitron	Industrial	2.60 %	Norway
UFP Technologies	Consumer, Non-cyclical	2.59 %	United States
Green Brick Partners	Consumer, Cyclical	2.35 %	United States
Hawkins	Basic Materials	2.22 %	United States
Napco Security Technologies	Industrial	2.19 %	United States
CBIZ	Consumer, Non-cyclical	2.07 %	United States
Vidrala	Industrial	1.85 %	Spain
Insight Enterprises	Technology	1.72 %	United States
Howden Joinery Group	Consumer, Cyclical	1.63 %	United Kingdom
Gift Holdings	Consumer, Cyclical	1.63 %	Japan
DMG Mori	Industrial	1.62 %	Japan
ADENTRA	Consumer, Cyclical	1.62 %	Canada
VSE	Consumer, Cyclical	1.62 %	United States
Richelieu Hardware	Consumer, Cyclical	1.61 %	Canada
Hovnanian Enterprises	Consumer, Cyclical	1.59 %	United States

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Industrial	26.06 %
Consumer, Cyclical	24.08 %
Consumer, Non-cyclical	23.75 %
Technology	10.41 %
Financial	9.98 %
Cash	2.26 %
Basic Materials	2.25 %
Communications	1.21 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

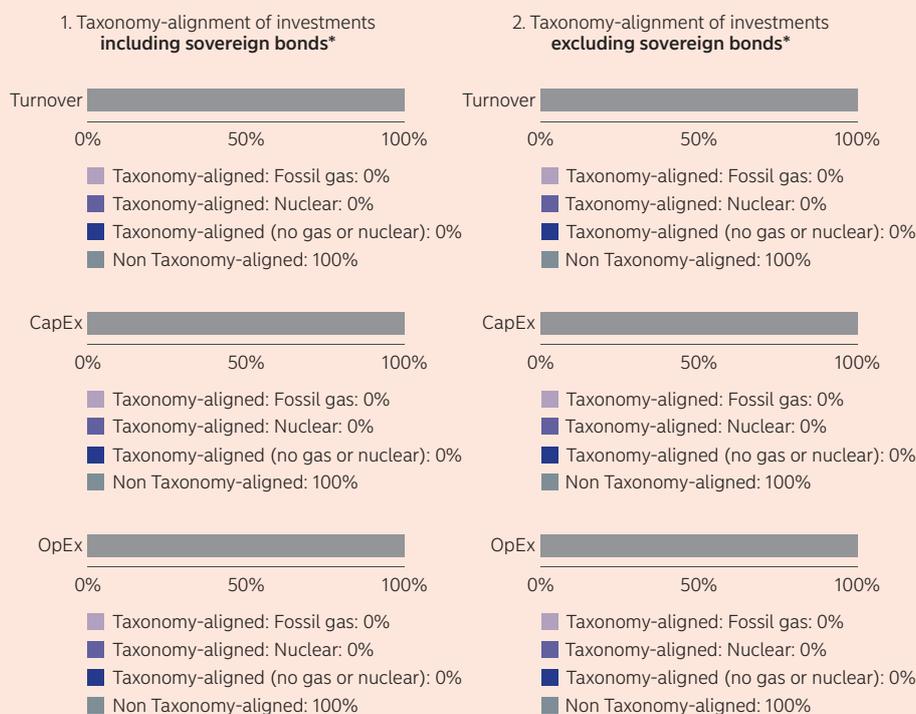

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 40 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 36 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Global Social Empowerment Fund

**Legal entity identifier:** 549300DN1QTCPEQWW22

### Sustainable investment objective

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** 85 %

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** 91 %

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent was the sustainable investment objective of this financial product met?

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

The sustainable investment objective of the fund was to support the 2030 Agenda for Sustainable Development adopted by the UN, with a focus on socio-economic challenges, by investing in companies that contribute to one or more of the following UN Sustainable Development Goals (SDGs):

- SDG 1: No Poverty
- SDG 2: Zero Hunger
- SDG 3: Good Health and Well-being
- SDG 4: Quality Education
- SDG 5: Gender Equality
- SDG 6: Clean Water and Sanitation
- SDG 8: Decent Work and Economic Growth
- SDG 9: Industry, Innovation and Infrastructure
- SDG 10: Reduced Inequality
- SDG 11: Sustainable Cities and Communities
- SDG 12: Responsible Consumption and Production
- SDG 16: Peace and Justice Strong Institutions
- SDG 17: Partnerships to achieve the Goal

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the sustainable investment objective of the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Contribution to SDG 1 - No poverty	End poverty in all its forms everywhere	4.25 % of financed revenue	98.61 %	98.61 %
Contribution to SDG 2 - Zero Hunger	End hunger, achieve food security and improved nutrition and promote sustainable agriculture	1.86 % of financed revenue	98.61 %	98.61 %
Contribution to SDG 3 - Good Health and Well-being	Ensure healthy lives and promote well-being for all at all ages	24.85 % of financed revenue	98.61 %	98.61 %
Contribution to SDG 4 - Quality Education	Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all	4.54 % of financed revenue	98.61 %	98.61 %
Contribution to SDG 5 - Gender Equality	Achieve gender equality and empower all women and girls	0.70 % of financed revenue	98.61 %	98.61 %
Contribution to SDG 6 - Clean Water and Sanitation	Ensure availability and sustainable management of water and sanitation for all	14.51 % of financed revenue	98.61 %	98.61 %

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Contribution to SDG 8 - Decent Work and Economic Growth	Promote sustained and sustainable economic growth, full and productive employment and decent work for all	13.14 % of financed revenue	98.61 %	96.19 %
Contribution to SDG 9 - Industry, Innovation and Infrastructure	Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation	25.38 % of financed revenue	98.61 %	96.75 %
Contribution to SDG 10 - Reduced Inequality	Reduce inequality within and among countries	4.38 % of financed revenue	98.61 %	98.61 %
Contribution to SDG 11 - Sustainable Cities and Communities	Make cities and human settlements inclusive, safe, resilient and sustainable	7.90 % of financed revenue	98.61 %	98.61 %
Contribution to SDG 12 - Responsible Consumption and Production	Ensure sustainable consumption and production patterns	0.90 % of financed revenue	98.61 %	98.61 %
Contribution to SDG 16 - Peace, Justice and Strong Institutions	Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels	2.09 % of financed revenue	98.61 %	98.61 %
Contribution to SDG 17 - Partnerships for the Goals	Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development	0.00 % of financed revenue	98.61 %	96.75 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage

		2022	N/A	N/A	N/A

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	587 tCO <sub>2</sub> e	98.61 %	98.61 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Sustainable** covers sustainable investments with environmental or social objectives.

**#2 Not Sustainable** includes investments which do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

### ● In which economic sectors were the investments made?

Sector	Assets
Consumer, Non-cyclical	28.01 %
Financial	22.06 %
Technology	19.04 %
Industrial	13.12 %
Communications	11.84 %
Consumer, Cyclical	2.69 %
Cash	1.39 %
Utilities	1.06 %
Basic Materials	0.81 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

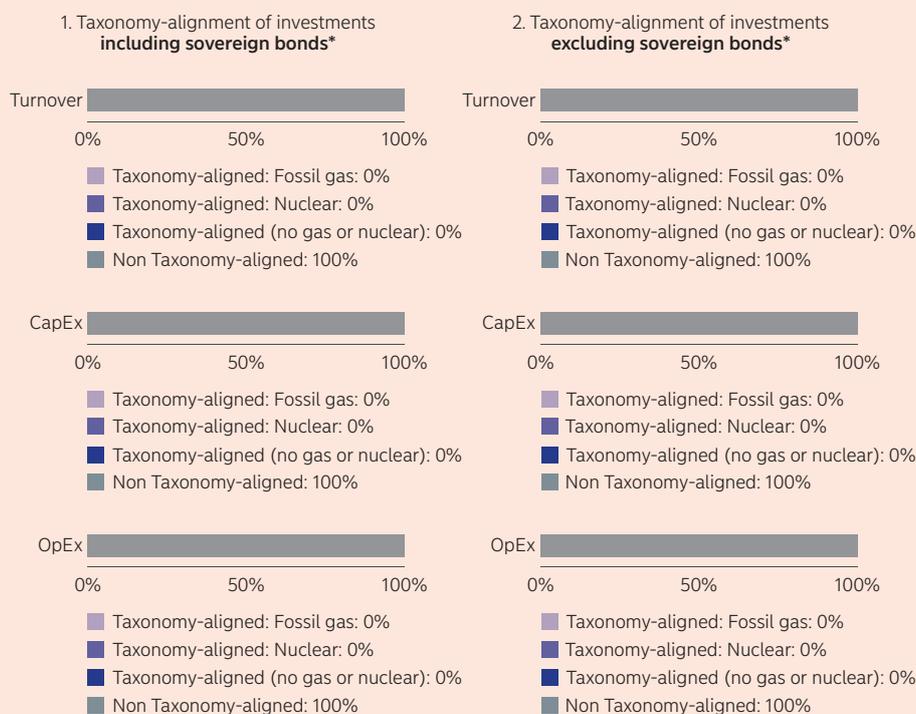

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?**

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 84 %.

**What was the share of socially sustainable investments?**

The share of socially sustainable investments was 91 %.

**What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?**

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the 'Fund Descriptions' in the prospectus. Due to the nature of the instruments, minimum environmental and social safeguards were not applicable to cash and currency hedging instruments.

**What actions have been taken to attain the sustainable investment objective during the reference period?**

The binding elements of the investment strategy used to select the investments to attain the sustainable investment objective by this fund have been monitored and documented on an ongoing basis.

**How did this financial product perform compared to the reference benchmark?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Global Social Solutions Fund

**Legal entity identifier:** 549300MIQ11L48WP8M30

### Sustainable investment objective

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** 85 %

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** 94 %

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent was the sustainable investment objective of this financial product met?

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

The sustainable investment objective of the fund was to support the 2030 Agenda for Sustainable Development adopted by the UN, with a focus on socio-economic challenges, by investing in companies that contribute to one or more of the following UN Sustainable Development Goals (SDGs):

- SDG 1: No Poverty
- SDG 2: Zero Hunger
- SDG 3: Good Health and Well-being
- SDG 4: Quality Education
- SDG 5: Gender Equality
- SDG 6: Clean Water and Sanitation
- SDG 8: Decent Work and Economic Growth
- SDG 9: Industry, Innovation and Infrastructure
- SDG 10: Reduced Inequality
- SDG 11: Sustainable Cities and Communities
- SDG 12: Responsible Consumption and Production
- SDG 16: Peace and Justice Strong Institutions
- SDG 17: Partnerships to achieve the Goal

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the sustainable investment objective of the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Contribution to SDG 1 - No poverty	End poverty in all its forms everywhere	4.87 % of financed revenue	97.56 %	97.13 %
Contribution to SDG 2 - Zero Hunger	End hunger, achieve food security and improved nutrition and promote sustainable agriculture	1.22 % of financed revenue	97.56 %	97.13 %
Contribution to SDG 3 - Good Health and Well-being	Ensure healthy lives and promote well-being for all at all ages	28.31 % of financed revenue	97.56 %	97.13 %
Contribution to SDG 4 - Quality Education	Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all	5.46 % of financed revenue	97.56 %	97.13 %
Contribution to SDG 5 - Gender Equality	Achieve gender equality and empower all women and girls	1.16 % of financed revenue	97.56 %	97.13 %
Contribution to SDG 6 - Clean Water and Sanitation	Ensure availability and sustainable management of water and sanitation for all	17.37 % of financed revenue	97.56 %	97.13 %

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Contribution to SDG 8 - Decent Work and Economic Growth	Promote sustained and sustainable economic growth, full and productive employment and decent work for all	10.99 % of financed revenue	97.56 %	94.20 %
Contribution to SDG 9 - Industry, Innovation and Infrastructure	Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation	17.29 % of financed revenue	97.56 %	94.81 %
Contribution to SDG 10 - Reduced Inequality	Reduce inequality within and among countries	5.07 % of financed revenue	97.56 %	97.13 %
Contribution to SDG 11 - Sustainable Cities and Communities	Make cities and human settlements inclusive, safe, resilient and sustainable	8.31 % of financed revenue	97.56 %	97.13 %
Contribution to SDG 12 - Responsible Consumption and Production	Ensure sustainable consumption and production patterns	1.86 % of financed revenue	97.56 %	97.13 %
Contribution to SDG 16 - Peace, Justice and Strong Institutions	Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels	1.82 % of financed revenue	97.56 %	97.13 %
Contribution to SDG 17 - Partnerships for the Goals	Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development	0.00 % of financed revenue	97.56 %	94.81 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

		2022	N/A	N/A	N/A

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	155 tCO <sub>2</sub> e	97.56 %	97.56 %
		Scope 2 GHG emissions	58 tCO <sub>2</sub> e	97.56 %	97.56 %
		Scope 3 GHG emissions	1,937 tCO <sub>2</sub> e	97.56 %	97.56 %
		Total GHG emissions Scope 1+2	213 tCO <sub>2</sub> e	97.56 %	97.56 %
		Total GHG emissions Scope 1+2+3	2,150 tCO <sub>2</sub> e	97.56 %	97.56 %
	Carbon footprint	Carbon footprint	14 tCO <sub>2</sub> e / m€ invested	97.56 %	97.56 %
		Carbon footprint Scope 1+2+3	137 tCO <sub>2</sub> e / m€ invested	97.56 %	97.56 %
	GHG intensity of investee companies	GHG intensity of investee companies	67 tCO <sub>2</sub> e / m€ of owned revenue	97.56 %	97.56 %
		GHG intensity of investee companies Scope 1+2+3	458 tCO <sub>2</sub> e / m€ of owned revenue	97.56 %	97.16 %
	Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	1.21 % investments in fossil fuels	97.56 %	97.56 %
	Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources	74.14 % non-renewable energy consumption	97.56 %	75.82 %
			5.70 % non-renewable energy production	97.56 %	0.12 %

## CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	Energy consumption intensity per high impact climate sector	Agriculture forestry and fishing (A)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Mining and quarrying (B)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Manufacturing (C)	0.10 GWh / m€ of revenue	40.36 %	37.69 %
		Electricity gas steam and air conditioning supply (D)	0.83 GWh / m€ of revenue	0.12 %	0.12 %
		Water supply sewerage waste management and remediation activities (E)	0.72 GWh / m€ of revenue	4.37 %	4.37 %
		Construction (F)	0.17 GWh / m€ of revenue	2.21 %	2.21 %
		Wholesale and retail trade repair of motor vehicles and motorcycles (G)	0.03 GWh / m€ of revenue	4.79 %	4.79 %
		Transportation and storage (H)	0.33 GWh / m€ of revenue	1.95 %	1.95 %
		Real estate activities (L)	0.15 GWh / m€ of revenue	1.14 %	0.65 %
Biodiversity	Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas	0.00 % with negative impact	97.56 %	95.51 %
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.00 tons / m€ invested	97.56 %	0.00 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.15 tons / m€ invested	97.56 %	79.82 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	97.56 %	97.56 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % without policies	97.56 %	92.57 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	11.27 % pay gap	97.56 %	35.80 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	33.28 % (female directors / total directors)	97.56 %	97.52 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	97.56 %	94.57 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

Largest investments	Sector	Assets	Country
AXA	Financial	3.79 %	France

Vinci	Industrial	2.21 %	France
Alcon	Consumer, Non-cyclical	2.12 %	Switzerland

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

### ● In which economic sectors were the investments made?

Sector	Assets
Consumer, Non-cyclical	33.60 %
Financial	24.08 %
Industrial	17.20 %
Communications	11.82 %
Technology	7.20 %
Cash	2.44 %
Utilities	1.94 %
Consumer, Cyclical	1.72 %
<b>Sum</b>	<b>100.00 %</b>

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

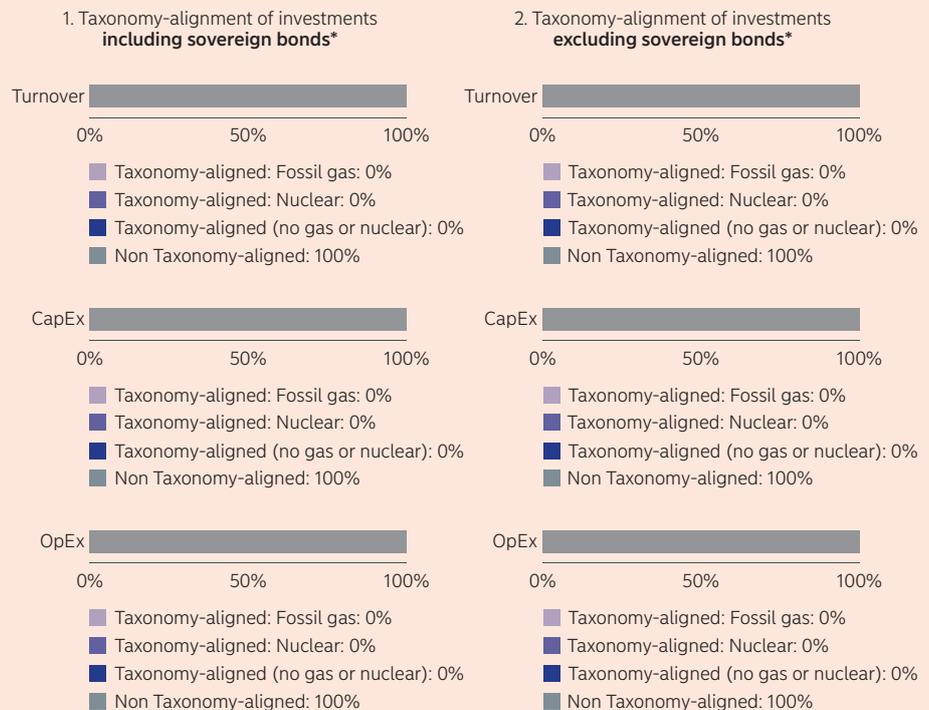

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

**Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:  
 In fossil gas       In nuclear energy  
 No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?**

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 84 %.

**What was the share of socially sustainable investments?**

The share of socially sustainable investments was 94 %.

**What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?**

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the 'Fund Descriptions' in the prospectus. Due to the nature of the instruments, minimum environmental and social safeguards were not applicable to cash and currency hedging instruments.

**What actions have been taken to attain the sustainable investment objective during the reference period?**

The binding elements of the investment strategy used to select the investments to attain the sustainable investment objective by this fund have been monitored and documented on an ongoing basis.

**How did this financial product perform compared to the reference benchmark?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Global Stable Equity Fund

**Legal entity identifier:** 549300OYMIP4UL664L36

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 79 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	30 tCO <sub>2</sub> e / m€ invested	98.93 %	98.56 %
	Carbon footprint Scope 1+2+3	195 tCO <sub>2</sub> e / m€ invested	98.93 %	98.56 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	98.93 %	98.52 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	30 tCO <sub>2</sub> e / m€ invested	98.93 %	98.56 %
		2022	34 tCO <sub>2</sub> e / m€ invested	98.24 %	98.24 %
	Carbon footprint Scope 1+2+3	2023	195 tCO <sub>2</sub> e / m€ invested	98.93 %	98.56 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.00 % involved in violations	98.93 %	98.52 %
		2022	0.00 % involved in violations	98.24 %	98.24 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	58,695 tCO <sub>2</sub> e	98.93 %	98.56 %
		Scope 2 GHG emissions	21,186 tCO <sub>2</sub> e	98.93 %	98.56 %
		Scope 3 GHG emissions	439,399 tCO <sub>2</sub> e	98.93 %	98.56 %
		Total GHG emissions Scope 1+2	79,880 tCO <sub>2</sub> e	98.93 %	98.56 %
		Total GHG emissions Scope 1+2+3	519,279 tCO <sub>2</sub> e	98.93 %	98.56 %
	Carbon footprint	Carbon footprint	30 tCO <sub>2</sub> e / m€ invested	98.93 %	98.56 %
		Carbon footprint Scope 1+2+3	195 tCO <sub>2</sub> e / m€ invested	98.93 %	98.56 %
	GHG intensity of investee companies	GHG intensity of investee companies	80 tCO <sub>2</sub> e / m€ of owned revenue	98.93 %	98.83 %
		GHG intensity of investee companies Scope 1+2+3	442 tCO <sub>2</sub> e / m€ of owned revenue	98.93 %	97.95 %
	Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	6.90 % investments in fossil fuels	98.93 %	98.25 %
	Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources	70.06 % non-renewable energy consumption	98.93 %	85.33 %
			65.14 % non-renewable energy production	98.93 %	6.42 %

## CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	Energy consumption intensity per high impact climate sector	Agriculture forestry and fishing (A)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Mining and quarrying (B)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Manufacturing (C)	0.26 GWh / m€ of revenue	33.19 %	32.47 %
		Electricity gas steam and air conditioning supply (D)	3.97 GWh / m€ of revenue	6.67 %	6.67 %
		Water supply sewerage waste management and remediation activities (E)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Construction (F)	0.16 GWh / m€ of revenue	2.95 %	2.95 %
		Wholesale and retail trade repair of motor vehicles and motorcycles (G)	0.04 GWh / m€ of revenue	8.71 %	8.71 %
		Transportation and storage (H)	0.33 GWh / m€ of revenue	0.63 %	0.63 %
		Real estate activities (L)	0.17 GWh / m€ of revenue	1.06 %	1.06 %
		Biodiversity	Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas	2.54 % with negative impact
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.01 tons / m€ invested	98.93 %	1.83 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.30 tons / m€ invested	98.93 %	80.57 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	98.93 %	98.52 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.50 % without policies	98.93 %	97.53 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	7.54 % pay gap	98.93 %	44.53 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	36.06 % (female directors / total directors)	98.93 %	96.41 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	98.93 %	97.89 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

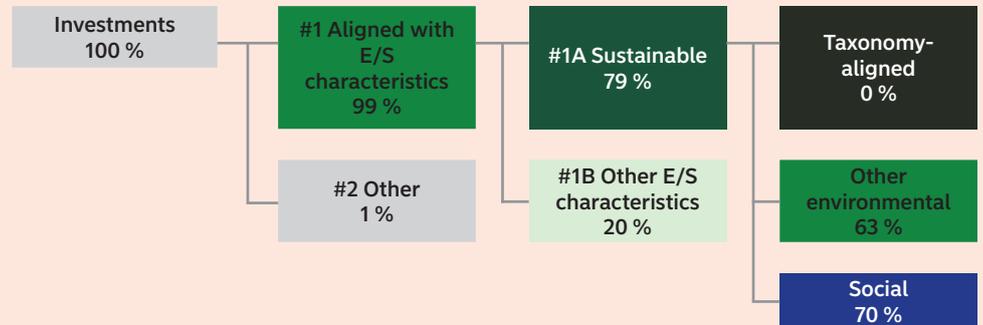

Largest investments	Sector	Assets	Country
Alphabet	Communications	3.18 %	United States
Cigna Group/The	Consumer, Non-cyclical	2.78 %	United States
Johnson & Johnson	Consumer, Non-cyclical	2.71 %	United States
CVS Health	Consumer, Non-cyclical	2.70 %	United States
Cisco Systems	Communications	2.69 %	United States
Coca-Cola	Consumer, Non-cyclical	2.44 %	United States
Sanofi	Consumer, Non-cyclical	2.42 %	France
Comcast	Communications	2.35 %	United States
Vinci	Industrial	2.29 %	France
eBay	Communications	2.25 %	United States
Nippon Telegraph & Telephone	Communications	2.11 %	Japan
Microsoft	Technology	2.05 %	United States
Reckitt Benckiser Group	Consumer, Non-cyclical	1.97 %	United Kingdom
Bristol-Myers Squibb	Consumer, Non-cyclical	1.96 %	United States
Iberdrola	Utilities	1.95 %	Spain

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Consumer, Non-cyclical	39.19 %
Communications	21.03 %
Technology	13.97 %
Financial	8.83 %
Utilities	6.67 %
Industrial	5.83 %
Consumer, Cyclical	2.05 %
Basic Materials	1.38 %
Cash	1.06 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

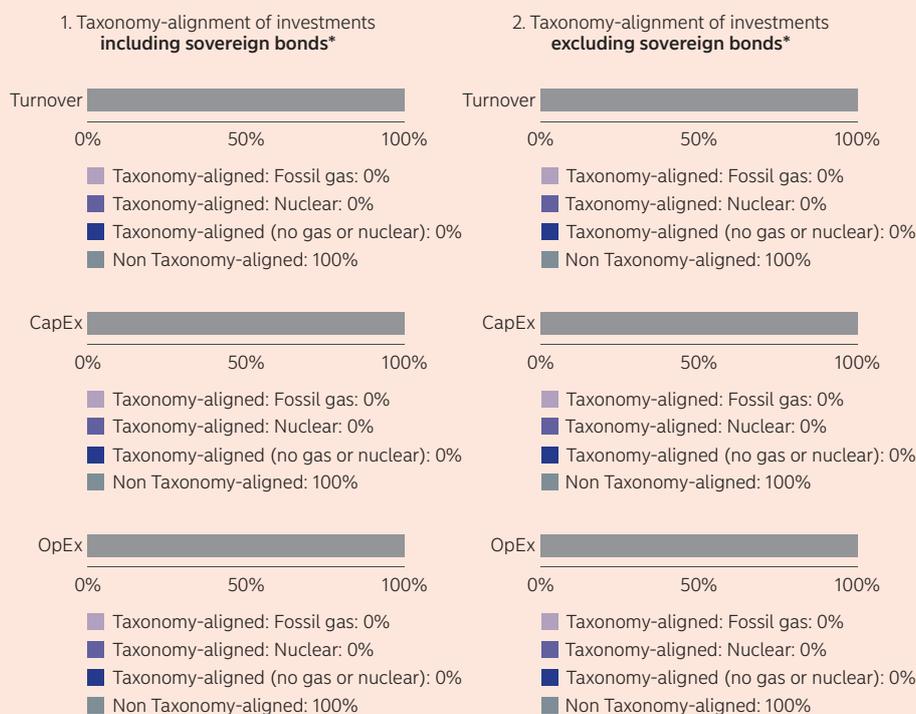

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 63 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 70 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Global Stable Equity Fund - Euro Hedged

**Legal entity identifier:** 549300IK30ET6JVM1T50

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 79 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	30 tCO <sub>2</sub> e / m€ invested	99.08 %	98.71 %

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	12,022 tCO <sub>2</sub> e	99.08 %	98.71 %
		Scope 2 GHG emissions	4,329 tCO <sub>2</sub> e	99.08 %	98.71 %
		Scope 3 GHG emissions	89,793 tCO <sub>2</sub> e	99.08 %	98.71 %
		Total GHG emissions Scope 1+2	16,351 tCO <sub>2</sub> e	99.08 %	98.71 %

Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.01 tons / m€ invested	99.08 %	1.85 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.30 tons / m€ invested	99.08 %	80.58 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	99.08 %	98.66 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.51 % without policies	99.08 %	97.67 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	7.54 % pay gap	99.08 %	44.55 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	36.08 % (female directors / total directors)	99.08 %	96.55 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	99.08 %	98.03 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

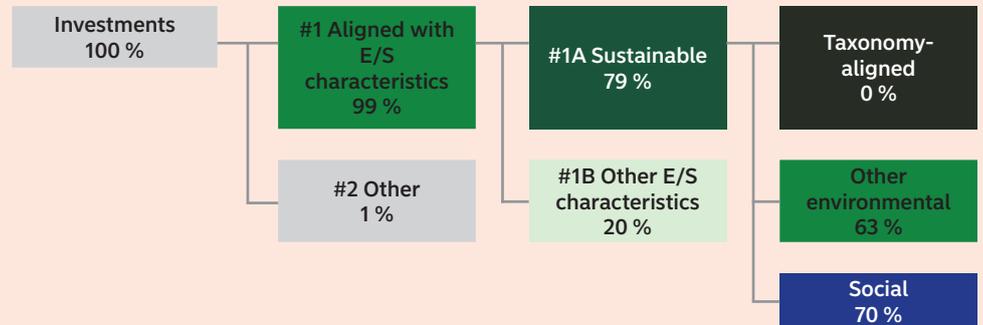

Largest investments	Sector	Assets	Country
Alphabet	Communications	3.20 %	United States
Cigna Group/The	Consumer, Non-cyclical	2.79 %	United States
Johnson & Johnson	Consumer, Non-cyclical	2.72 %	United States
CVS Health	Consumer, Non-cyclical	2.72 %	United States
Cisco Systems	Communications	2.71 %	United States
Coca-Cola	Consumer, Non-cyclical	2.46 %	United States
Sanofi	Consumer, Non-cyclical	2.44 %	France
Comcast	Communications	2.37 %	United States
Vinci	Industrial	2.30 %	France
eBay	Communications	2.27 %	United States
Nippon Telegraph & Telephone	Communications	2.12 %	Japan
Microsoft	Technology	2.07 %	United States
Reckitt Benckiser Group	Consumer, Non-cyclical	1.99 %	United Kingdom
Bristol-Myers Squibb	Consumer, Non-cyclical	1.98 %	United States
Iberdrola	Utilities	1.96 %	Spain

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Consumer, Non-cyclical	39.42 %

Cash	0.94 %
FX Forwards	-0.50 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

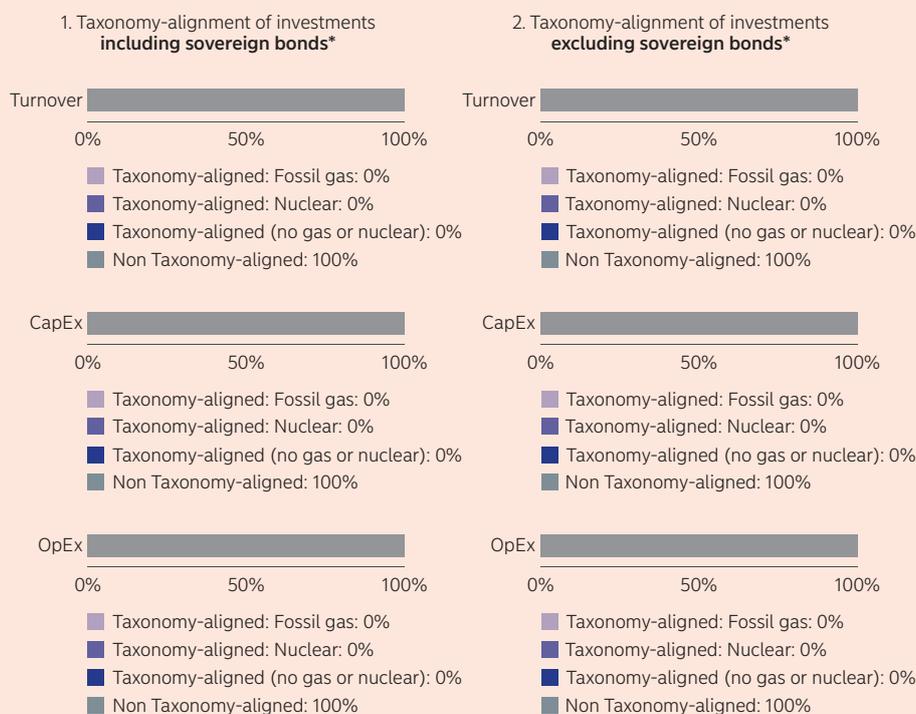

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 63 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 70 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Global Stars Equity Fund

**Legal entity identifier:** 5493003YXBZ7881E6K64

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 74 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	27 tCO <sub>2</sub> e / m€ invested	97.22 %	97.22 %
	Carbon footprint Scope 1+2+3	153 tCO <sub>2</sub> e / m€ invested	97.22 %	97.22 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2.86 % involved in violations	97.22 %	97.22 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage

		2022	2.56 % involved in violations	97.16 %	97.16 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	42,977 tCO <sub>2</sub> e	97.22 %	97.22 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

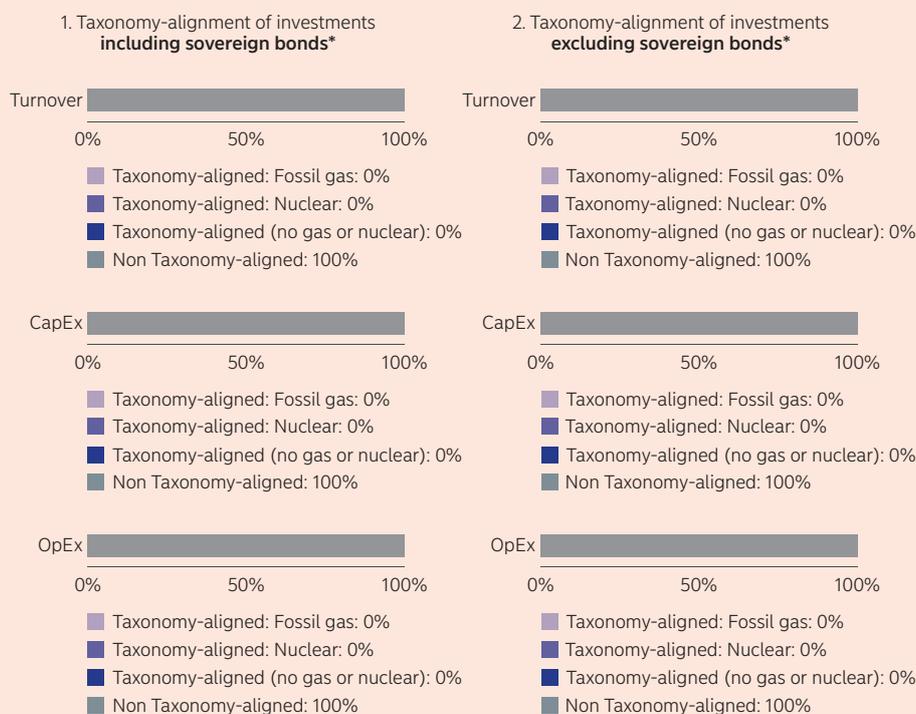

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 57 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 64 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Global Sustainable Listed Real Assets Fund

**Legal entity identifier:** 5493004Z6MZQXNQSWI84

### Sustainable investment objective

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** 96 %

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** 67 %

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent was the sustainable investment objective of this financial product met?

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

The fund combined environmentally and socially sustainable investment objectives. It aimed to create positive environmental and social impact, by investing in companies that are involved in economic activities that are considered environmentally or socially sustainable by virtue of their contribution to one or more of the environmental- or social-themed UN SDGs. The EU Taxonomy provides a framework for assessing the environmental sustainability of economic activities and to the extent that reliable data was available, the Taxonomy was the reference point for the assessment of the environmentally sustainable investments.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the sustainable investment objective of the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Contribution to SDG 3 - Good Health and Well-being	Ensure healthy lives and promote well-being for all at all ages	7.47 % of financed revenue	97.91 %	97.75 %
Contribution to SDG 6 - Clean Water and Sanitation	Ensure availability and sustainable management of water and sanitation for all	4.78 % of financed revenue	97.91 %	97.75 %
Contribution to SDG 7 - Affordable and Clean Energy	Ensure access to affordable, reliable, sustainable and modern energy for all	4.09 % of financed revenue	97.91 %	97.75 %
Contribution to SDG 9 - Industry, Innovation and Infrastructure	Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation	18.42 % of financed revenue	97.91 %	94.84 %
Contribution to SDG 11 - Sustainable Cities and Communities	Make cities and human settlements inclusive, safe, resilient and sustainable	25.86 % of financed revenue	97.91 %	97.75 %
% of total investments in EU taxonomy aligned activities	Alignment with EU taxonomy is used to measure the share of sustainable investments with an environmental objective that is aligned with the EU Taxonomy	13.63 % alignment to EU taxonomy	97.91 %	97.56 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● ...and compared to previous periods?

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Contribution to SDG 3 - Good Health and Well-being	Ensure healthy lives and promote well-being for all at all ages	2023	7.47 % of financed revenue	97.91 %	97.75 %
		2022	8.88 % of financed revenue	98.22 %	97.94 %
Contribution to SDG 6 - Clean Water and Sanitation	Ensure availability and sustainable management of water and sanitation for all	2023	4.78 % of financed revenue	97.91 %	97.75 %
		2022	5.22 % of financed revenue	98.22 %	97.94 %
Contribution to SDG 7 - Affordable and Clean Energy	Ensure access to affordable, reliable, sustainable and modern energy for all	2023	4.09 % of financed revenue	97.91 %	97.75 %
		2022	1.17 % of financed revenue	98.22 %	97.94 %
Contribution to SDG 9 - Industry, Innovation and Infrastructure	Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation	2023	18.42 % of financed revenue	97.91 %	94.84 %
		2022	15.06 % of financed revenue	98.22 %	95.93 %
Contribution to SDG 11 - Sustainable Cities and Communities	Make cities and human settlements inclusive, safe, resilient and sustainable	2023	25.86 % of financed revenue	97.91 %	97.75 %
		2022	29.37 % of financed revenue	98.22 %	97.94 %
% of total investments in EU taxonomy aligned activities	Alignment with EU taxonomy is used to measure the share of sustainable investments with an environmental objective that is aligned with the EU Taxonomy	2023	13.63 % alignment to EU taxonomy	97.91 %	97.56 %
	Alignment with EU taxonomy is used to measure the share of sustainable investments with an environmental objective that is aligned with the EU Taxonomy	2022	8.32 % alignment to EU taxonomy	98.35 %	95.82 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments not cause significant harm to any sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	4,965 tCO <sub>2</sub> e	97.91 %	97.91 %
		Scope 2 GHG emissions	400 tCO <sub>2</sub> e	97.91 %	97.91 %
		Scope 3 GHG emissions	8,729 tCO <sub>2</sub> e	97.91 %	97.91 %
		Total GHG emissions Scope 1+2	5,365 tCO <sub>2</sub> e	97.91 %	97.91 %

		GHG intensity of investee companies Scope 1+2+3	1,672 tCO <sub>2</sub> e / m€ of owned revenue	97.91 %	97.91 %
	Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	29.23 % investments in fossil fuels	97.91 %	96.78 %
	Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources	76.32 % non-renewable energy consumption	97.91 %	58.15 %
			69.83 % non-renewable energy production	97.91 %	37.22 %

## CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	Energy consumption intensity per high impact climate sector	Agriculture forestry and fishing (A)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Mining and quarrying (B)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Manufacturing (C)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Electricity gas steam and air conditioning supply (D)	4.67 GWh / m€ of revenue	40.85 %	40.85 %
		Water supply sewerage waste management and remediation activities (E)	0.45 GWh / m€ of revenue	2.83 %	2.83 %
		Construction (F)	0.17 GWh / m€ of revenue	6.57 %	6.57 %
		Wholesale and retail trade repair of motor vehicles and motorcycles (G)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Transportation and storage (H)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Real estate activities (L)	0.34 GWh / m€ of revenue	40.02 %	40.02 %
		Biodiversity	Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas	1.14 % with negative impact
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.00 tons / m€ invested	97.91 %	0.00 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.20 tons / m€ invested	97.91 %	78.31 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	97.91 %	97.91 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.61 % without policies	97.91 %	96.27 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	5.43 % pay gap	97.91 %	35.22 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	36.98 % (female directors / total directors)	97.91 %	96.38 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	97.91 %	95.35 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

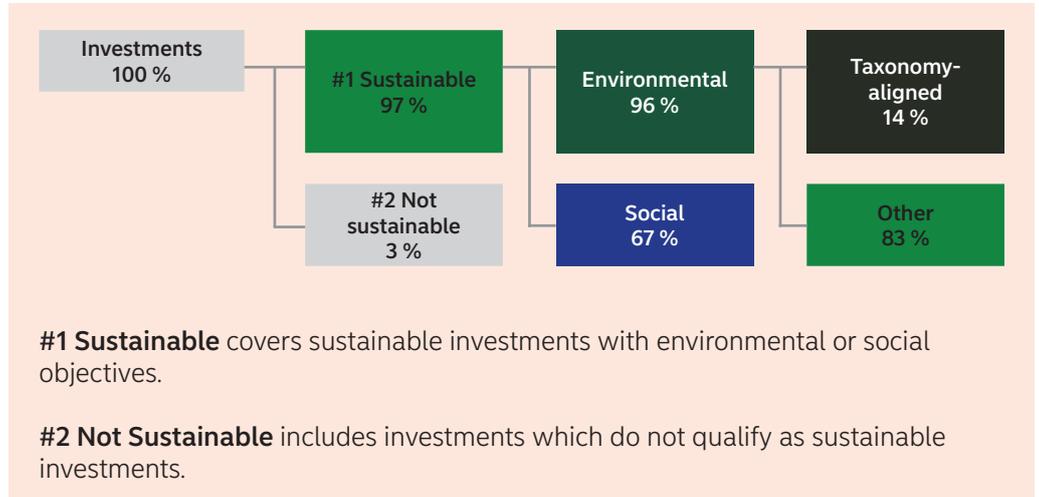

Largest investments	Sector	Assets	Country
Enel	Utilities	6.17 %	Italy
American Tower	Financial	5.41 %	United States
Equinix	Financial	5.35 %	United States
Vinci	Industrial	5.05 %	France
WEC Energy Group	Utilities	5.03 %	United States
NextEra Energy	Utilities	4.56 %	United States
Alexandria Real Estate Equities	Financial	4.13 %	United States
Prologis	Financial	4.06 %	United States
National Grid	Utilities	3.69 %	United Kingdom
Public Service Enterprise Group	Utilities	2.96 %	United States
Xcel Energy	Utilities	2.92 %	United States

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

### ● In which economic sectors were the investments made?

Sector	Assets
Financial	46.94 %
Utilities	42.80 %
Industrial	7.26 %
Cash	2.09 %
Energy	0.87 %
Consumer, Cyclical	0.04 %
<b>Sum</b>	<b>100.00 %</b>

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

- Yes:  
 In fossil gas       In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

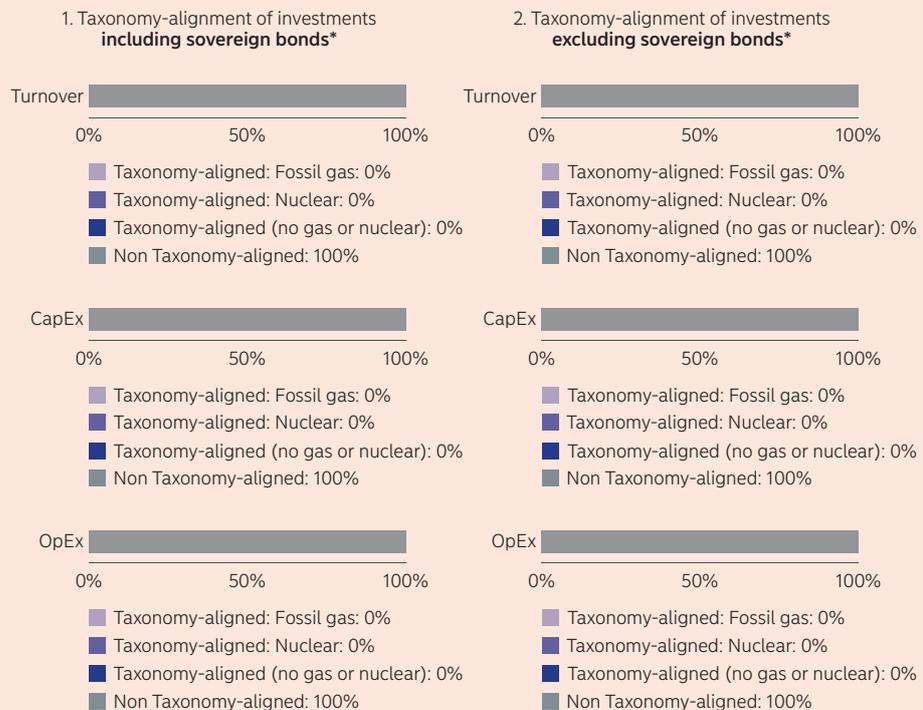

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 83 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 67 %.

### What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the 'Fund Descriptions' in the prospectus. Due to the nature of the instruments, minimum environmental and social safeguards were not applicable to cash and currency hedging instruments.

### What actions have been taken to attain the sustainable investment objective during the reference period?

The binding elements of the investment strategy used to select the investments to attain the sustainable investment objective by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - Global Value ESG Fund

**Legal entity identifier:** 549300RJ3S8CSJQ1CT83

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

**Yes**

**No**

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 65 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	72 tCO <sub>2</sub> e / m€ invested	97.45 %	97.45 %
	Carbon footprint Scope 1+2+3	501 tCO <sub>2</sub> e / m€ invested	97.45 %	97.45 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	97.45 %	97.45 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● *...and compared to previous periods?*

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	72 tCO <sub>2</sub> e / m€ invested	97.45 %	97.45 %
		2022	104 tCO <sub>2</sub> e / m€ invested	98.96 %	98.96 %
	Carbon footprint Scope 1+2+3	2023	501 tCO <sub>2</sub> e / m€ invested	97.45 %	97.45 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.00 % involved in violations	97.45 %	97.45 %
		2022	0.00 % involved in violations	98.96 %	98.96 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The "do no significant harm" principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	2,541 tCO <sub>2</sub> e	97.45 %	97.45 %
		Scope 2 GHG emissions	788 tCO <sub>2</sub> e	97.45 %	97.45 %

	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	97.45 %	97.45 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
1 January 2023 -  
31 December 2023

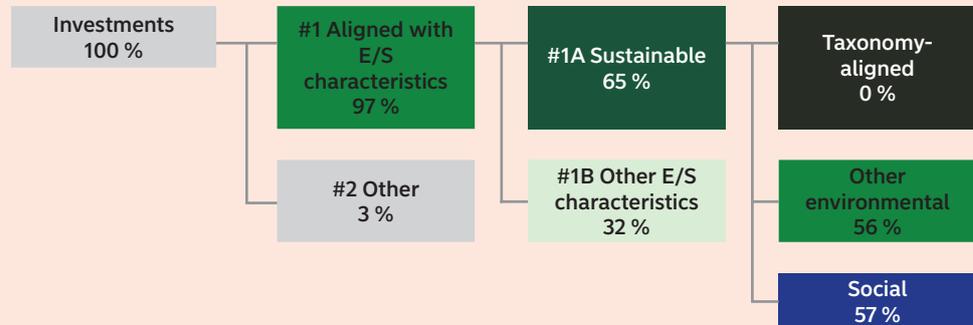

Largest investments	Sector	% Assets	Country
Cencora	Consumer, Non-cyclical	3.50 %	United States
DBS Group Holdings	Financial	3.49 %	Singapore
Reinsurance Group of America	Financial	3.35 %	United States
Applied Materials	Technology	3.29 %	United States
Hitachi	Industrial	3.00 %	Japan
Alphabet	Communications	2.86 %	United States
Oracle	Technology	2.81 %	United States
TransUnion	Consumer, Non-cyclical	2.75 %	United States
Centene	Consumer, Non-cyclical	2.69 %	United States
AIA Group	Financial	2.68 %	Hong Kong
KT ADR	Communications	2.61 %	Republic Of Korea
Sodexo	Consumer, Cyclical	2.55 %	France
Discover Financial Services	Financial	2.54 %	United States
QUALCOMM	Technology	2.49 %	United States
Pfizer	Consumer, Non-cyclical	2.44 %	United States

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	26.49 %
Consumer, Non-cyclical	22.72 %
Consumer, Cyclical	13.27 %
Technology	10.67 %
Industrial	9.84 %
Communications	5.95 %
Basic Materials	5.70 %
Cash	2.54 %
Energy	1.65 %
Utilities	1.16 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

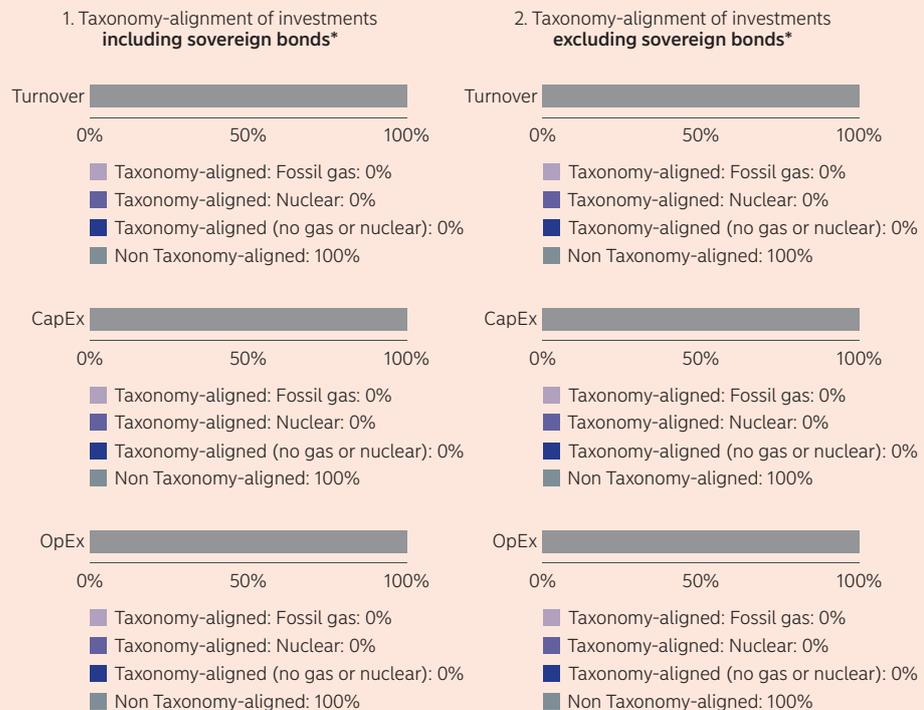

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 56 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 57 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Green Bond Fund

**Legal entity identifier:** 549300TSF9S6RT0LQL86

### Sustainable investment objective

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** 93 %

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** 11 %

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent was the sustainable investment objective of this financial product met?

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

The fund's sustainable investment objective was to provide financing for initiatives that were funded through the issuance of green bonds. At least 70% of the fund's total assets were invested in green bonds that comply with International Capital Markets Association (ICMA) or similar Green Bond Principles and/or Climate Bonds Initiative. The remaining part of the fund's assets may have been invested in social bonds or other bonds that contributed to a sustainable investment objective and did not significantly harm other social or environmental objectives while following good governance practices.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the sustainable investment objective of the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
% of total investments in bonds complying with Green Bond Principles / Climate Bonds Initiative / EU Green Bond Standard	% of AuM invested in bonds complying with Green Bond Principles / Climate Bonds Initiative / EU Green Bond Standard	49.07 % of Assets Under Management	95.00 %	53.73 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

### ● ...and compared to previous periods?

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
% of total investments in bonds complying with Green Bond Principles / Climate Bonds Initiative / EU Green Bond Standard	% of AuM invested in bonds complying with Green Bond Principles / Climate Bonds Initiative / EU Green Bond Standard	2023	49.07 % of Assets Under Management	95.00 %	53.73 %
		2022	73.84 % of Assets Under Management	93.18 %	93.18 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments not cause significant harm to any sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	10,417 tCO <sub>2</sub> e	66.34 %	60.16 %
		Scope 2 GHG emissions	956 tCO <sub>2</sub> e	66.34 %	60.16 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Sustainable** covers sustainable investments with environmental or social objectives.

**#2 Not Sustainable** includes investments which do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

### ● In which economic sectors were the investments made?

Sector	Assets
Financial	36.47 %
Government bonds	33.50 %
Utilities	11.23 %
Cash	5.25 %
Energy	3.30 %
Industrial	3.13 %

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

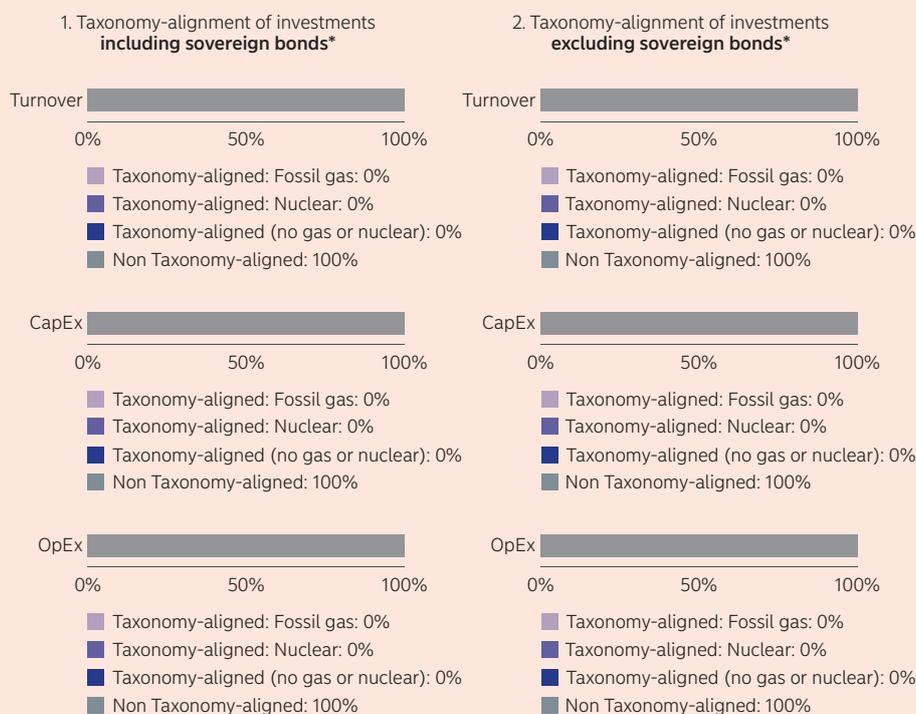

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 90 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 11 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the 'Fund Descriptions' in the prospectus. Minimum environmental and social safeguards were applicable to derivatives linked to a single underlying entity to exclude companies and issuers subject to international sanctions, as well as entities that were involved in serious breaches of international norms, where engagement is deemed not to be possible or effective. No minimum safeguards applied to cash or other types of derivatives.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain the sustainable investment objective by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Low Duration European Covered Bond Fund

**Legal entity identifier:** 549300T4YU2MVOMP8L55

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 9 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invested within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	1 tCO <sub>2</sub> e / m€ invested	83.69 %	71.37 %
	Carbon footprint Scope 1+2+3	52 tCO <sub>2</sub> e / m€ invested	83.69 %	71.03 %
Investee countries subject to social violations (absolute and relative)	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	12.56 %	12.53 %
		0.00 % investee countries subject to violations	12.56 %	12.53 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	83.69 %	61.84 %

		2022	225.94 tCO <sub>2</sub> e / m€ of owned GDP	11.15 %	10.68 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	462 tCO <sub>2</sub> e	83.69 %	71.37 %
		Scope 2 GHG emissions	1,043 tCO <sub>2</sub> e	83.69 %	71.37 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	77.12 %
Government bonds	19.14 %
Cash	2.21 %
Derivatives	1.53 %
FX Forwards	0.01 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

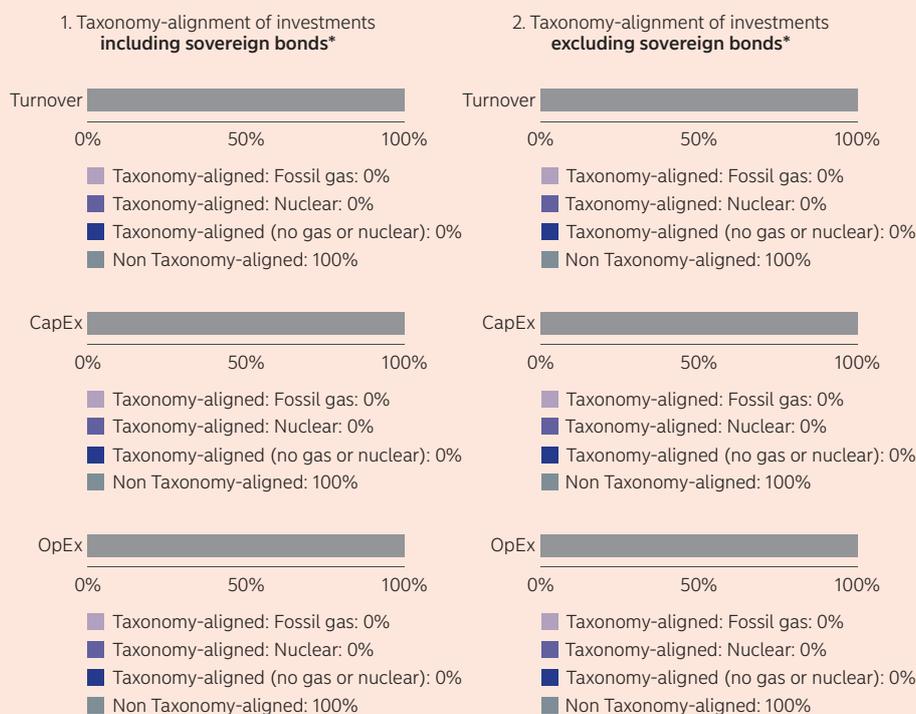

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 5 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 5 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Low Duration US High Yield Bond Fund

**Legal entity identifier:** 5493007JB6L1DCBXJN89

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 53 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	130 tCO <sub>2</sub> e / m€ invested	97.12 %	88.40 %
	Carbon footprint Scope 1+2+3	690 tCO <sub>2</sub> e / m€ invested	97.12 %	88.31 %
Investee countries subject to social violations (absolute and relative)	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	0.00 %	0.00 %
		0.00 % investee countries subject to violations	0.00 %	0.00 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	97.12 %	81.49 %
Greenhouse Gas Intensity for sovereigns	GHG intensity of investee countries	0.00 tCO <sub>2</sub> e / m€ of GDP	0.00 %	0.00 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	130 tCO <sub>2</sub> e / m€ invested	97.12 %	88.40 %
		2022	75 tCO <sub>2</sub> e / m€ invested	94.30 %	83.79 %
	Carbon footprint Scope 1+2+3	2023	690 tCO <sub>2</sub> e / m€ invested	97.12 %	88.31 %

		2022	N/A	N/A	N/A

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	9,682 tCO <sub>2</sub> e	97.12 %	88.40 %
		Scope 2 GHG emissions	1,379 tCO <sub>2</sub> e	97.12 %	88.40 %
		Scope 3 GHG emissions	47,238 tCO <sub>2</sub> e	97.12 %	88.31 %
		Total GHG emissions Scope 1+2	11,061 tCO <sub>2</sub> e	97.12 %	88.40 %
		Total GHG emissions Scope 1+2+3	58,308 tCO <sub>2</sub> e	97.12 %	88.31 %
	Carbon footprint	Carbon footprint	130 tCO <sub>2</sub> e / m€ invested	97.12 %	88.40 %
		Carbon footprint Scope 1+2+3	690 tCO <sub>2</sub> e / m€ invested	97.12 %	88.31 %

		GHG intensity of investee companies Scope 1+2+3	893 tCO <sub>2</sub> e / m€ of owned revenue	97.12 %	90.65 %
	Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	3.35 % investments in fossil fuels	97.12 %	69.02 %
	Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources	83.56 % non-renewable energy consumption	97.12 %	61.17 %
			26.89 % non-renewable energy production	97.12 %	0.86 %

## CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	Energy consumption intensity per high impact climate sector	Agriculture forestry and fishing (A)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Mining and quarrying (B)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Manufacturing (C)	0.77 GWh / m€ of revenue	10.54 %	9.15 %
		Electricity gas steam and air conditioning supply (D)	0.10 GWh / m€ of revenue	0.60 %	0.55 %
		Water supply sewerage waste management and remediation activities (E)	0.11 GWh / m€ of revenue	1.48 %	0.76 %
		Construction (F)	0.05 GWh / m€ of revenue	1.19 %	1.19 %
		Wholesale and retail trade repair of motor vehicles and motorcycles (G)	0.06 GWh / m€ of revenue	4.87 %	4.41 %
		Transportation and storage (H)	4.53 GWh / m€ of revenue	5.43 %	5.10 %
		Real estate activities (L)	0.22 GWh / m€ of revenue	2.91 %	2.91 %
		Biodiversity	Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas	0.21 % with negative impact
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.02 tons / m€ invested	97.12 %	1.29 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	1.76 tons / m€ invested	97.12 %	65.96 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	97.12 %	81.49 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.87 % without policies	97.12 %	86.98 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	12.66 % pay gap	97.12 %	20.59 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	30.07 % (female directors / total directors)	97.12 %	78.72 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	97.12 %	79.40 %

## INDICATORS APPLICABLE TO INVESTMENTS IN SOVEREIGNS AND SUPRANATIONAL

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Environmental	GHG Intensity for sovereigns	GHG intensity of investee countries	0.00 tCO <sub>2</sub> e / m€ of GDP	0.00 %	0.00 %
Social	Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	0.00 %	0.00 %
			0.00 % investee countries subject to violations	0.00 %	0.00 %
Governance	Non-cooperative tax jurisdictions	Investments in jurisdictions on the EU list of non-cooperative jurisdictions for tax purposes	0.00 % investee countries subject to violations	0.00 %	0.00 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

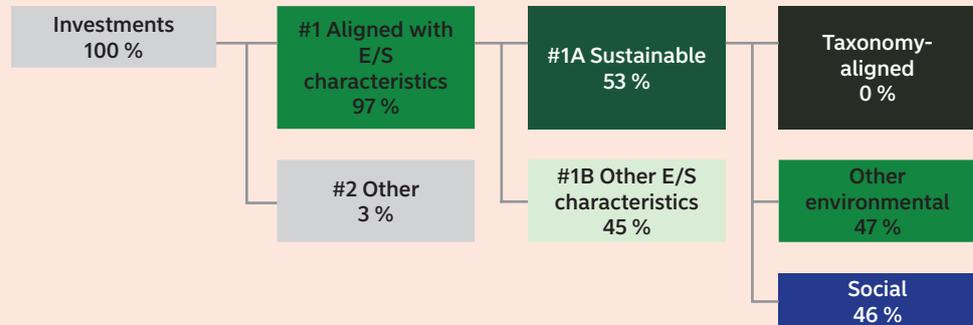

Largest investments	Sector	Assets	Country
Graphic Packaging Internatio 4.125% 15-08-2024	Industrial	2.26 %	United States
CCO Holdings LLC / CCO Holdi 5.5% 01-05-2026	Communications	2.05 %	United States
United Airlines Holdings Inc 4.875% 15-01-2025	Consumer, Cyclical	1.99 %	United States
Hillenbrand Inc 5.75% 15-06-2025	Industrial	1.74 %	United States
Aramark Services Inc 6.375% 01-05-2025	Consumer, Cyclical	1.69 %	United States
Sprint LLC 7.125% 15-06-2024	Communications	1.52 %	United States
GFL Environmental Inc 3.5% 01-09-2028	Industrial	1.31 %	Canada
Centene Corp 4.25% 15-12-2027	Consumer, Non-cyclical	1.27 %	United States
General Motors Financial Co 6.05% 10-10-2025	Consumer, Cyclical	1.22 %	United States
CSC Holdings LLC 5.5% 15-04-2027	Communications	1.20 %	United States
Kraft Heinz Foods Co 3.875% 15-05-2027	Consumer, Non-cyclical	1.16 %	United States
SBA Communications Corp 3.875% 15-02-2027	Financial	1.14 %	United States
Caesars Entertainment Inc 6.25% 01-07-2025	Consumer, Cyclical	1.12 %	United States
VICI Properties LP / VICI No 5.625% 01-05-2024	Financial	1.09 %	United States
Mattel Inc 3.375% 01-04-2026	Consumer, Cyclical	1.06 %	United States

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Consumer, Cyclical	26.25 %
Consumer, Non-cyclical	18.21 %
Communications	16.42 %
Industrial	14.39 %
Financial	12.20 %
Basic Materials	4.11 %
Technology	3.99 %
Cash	2.88 %
Utilities	1.54 %
Derivatives	0.00 %
FX Forwards	0.00 %
<b>Sum</b>	<b>100.00 %</b>

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

- Yes:
  - In fossil gas
  - In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

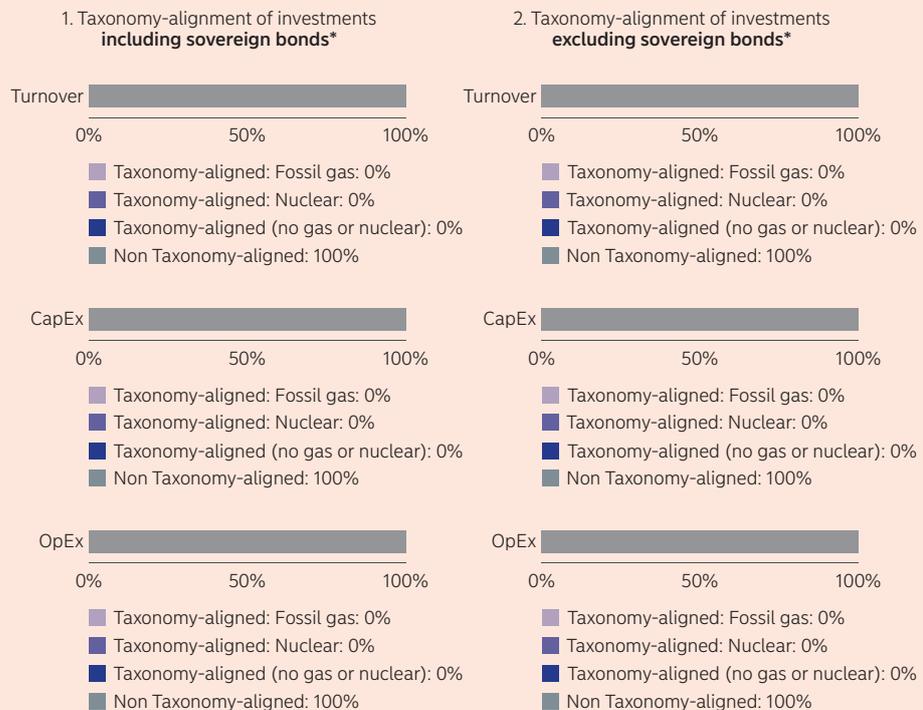

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 47 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 46 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - Nordic Equity Fund

**Legal entity identifier:** 5493002P8HQC8H89KJ23

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 70 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invested within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	19 tCO <sub>2</sub> e / m€ invested	94.76 %	94.76 %
	Carbon footprint Scope 1+2+3	217 tCO <sub>2</sub> e / m€ invested	94.76 %	94.76 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	94.76 %	94.76 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	19 tCO <sub>2</sub> e / m€ invested	94.76 %	94.76 %
		2022	22 tCO <sub>2</sub> e / m€ invested	97.30 %	97.30 %
	Carbon footprint Scope 1+2+3	2023	217 tCO <sub>2</sub> e / m€ invested	94.76 %	94.76 %
		2022	N/A	N/A	N/A

		2022	0.00 % involved in violations	97.30 %	97.30 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	2,958 tCO <sub>2</sub> e	94.76 %	94.76 %
		Scope 2 GHG emissions	1,268 tCO <sub>2</sub> e	94.76 %	94.76 %
		Scope 3 GHG emissions	45,085 tCO <sub>2</sub> e	94.76 %	94.76 %
		Total GHG emissions Scope 1+2	4,226 tCO <sub>2</sub> e	94.76 %	94.76 %

	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	94.76 %	94.46 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
1 January 2023 -  
31 December 2023

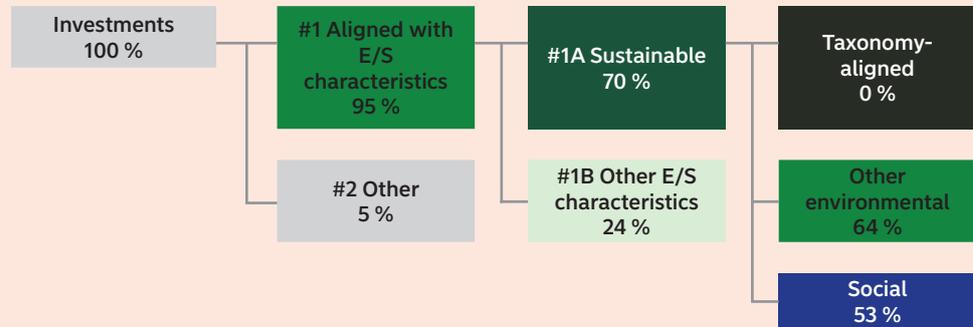

Largest investments	Sector	Assets	Country
Tryg	Financial	7.01 %	Denmark
Evolution	Consumer, Cyclical	6.56 %	Sweden
Novo Nordisk B	Consumer, Non-cyclical	6.17 %	Denmark
Neste	Energy	5.97 %	Finland
Sampo A	Financial	5.49 %	Finland
Atlas Copco A	Industrial	5.03 %	Sweden
Epiroc A	Industrial	4.18 %	Sweden
Gjensidige Forsikring	Financial	4.07 %	Norway
Chr. Hansen Holding	Basic Materials	4.07 %	Denmark

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Consumer, Non-cyclical	24.80 %
Financial	23.10 %
Industrial	17.82 %
Consumer, Cyclical	12.78 %
Energy	6.43 %
Cash	5.22 %
Basic Materials	4.93 %
Communications	4.25 %
Utilities	0.41 %
Technology	0.24 %
<b>Sum</b>	<b>100.00 %</b>

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

- Yes:  
 In fossil gas       In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

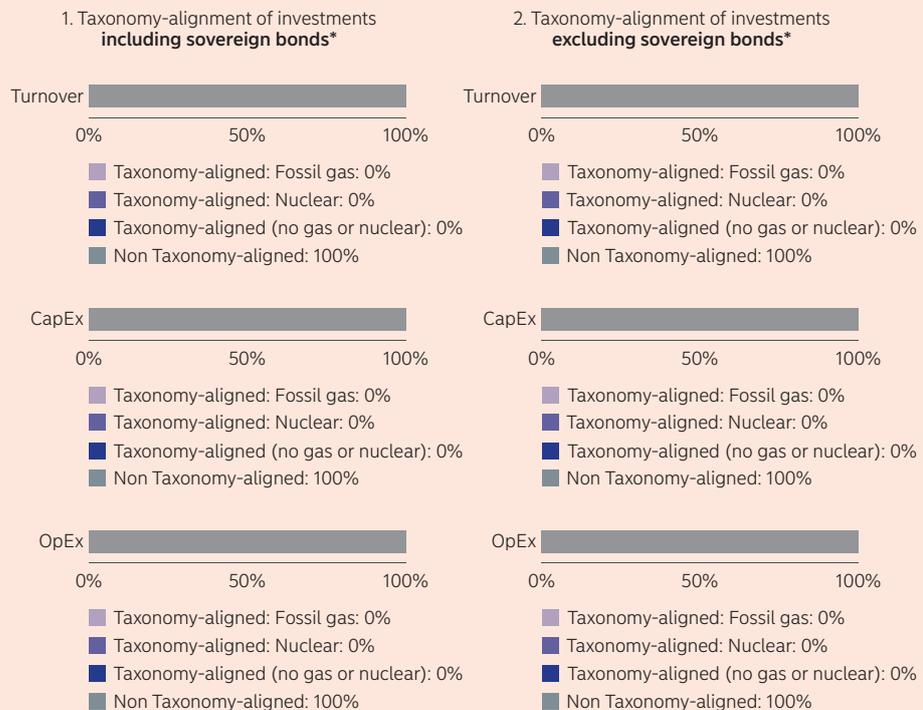

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 64 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 53 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - Nordic Equity Small Cap Fund

**Legal entity identifier:** 549300037CR2WTAYCN25

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 67 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invested within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	57 tCO <sub>2</sub> e / m€ invested	99.10 %	96.40 %
	Carbon footprint Scope 1+2+3	989 tCO <sub>2</sub> e / m€ invested	99.10 %	96.40 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	99.10 %	98.86 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● *...and compared to previous periods?*

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	57 tCO <sub>2</sub> e / m€ invested	99.10 %	96.40 %
		2022	49 tCO <sub>2</sub> e / m€ invested	99.09 %	96.00 %
	Carbon footprint Scope 1+2+3	2023	989 tCO <sub>2</sub> e / m€ invested	99.10 %	96.40 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.00 % involved in violations	99.10 %	98.86 %
		2022	0.00 % involved in violations	99.09 %	98.47 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The "do no significant harm" principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	3,050 tCO <sub>2</sub> e	99.10 %	96.40 %
		Scope 2 GHG emissions	4,453 tCO <sub>2</sub> e	99.10 %	96.40 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Industrial	35.88 %
Consumer, Non-cyclical	20.03 %
Financial	15.90 %
Consumer, Cyclical	14.11 %
Basic Materials	4.90 %
Technology	4.36 %
Communications	3.63 %
Cash	0.90 %
Energy	0.27 %
Derivatives	0.00 %
<b>Sum</b>	<b>100.00 %</b>

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

- Yes:
  - In fossil gas
  - In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

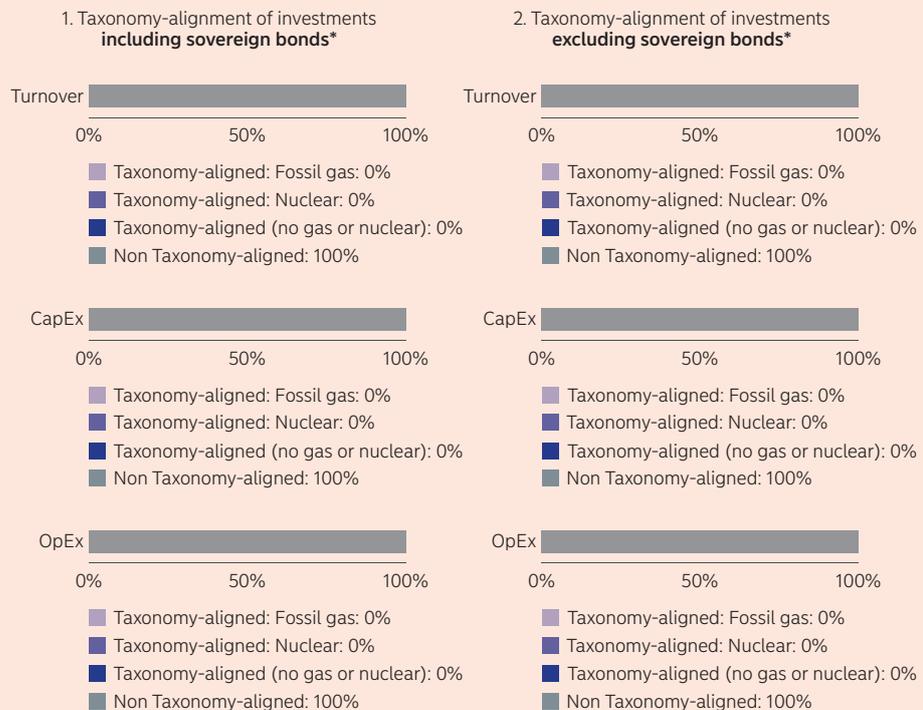

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 57 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 53 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Nordic Stars Equity Fund

**Legal entity identifier:** 549300CJ90IR50OH4506

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 81 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	14 tCO <sub>2</sub> e / m€ invested	93.78 %	93.39 %
	Carbon footprint Scope 1+2+3	211 tCO <sub>2</sub> e / m€ invested	93.78 %	93.39 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	93.78 %	93.78 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	14 tCO <sub>2</sub> e / m€ invested	93.78 %	93.39 %
		2022	17 tCO <sub>2</sub> e / m€ invested	96.85 %	95.16 %
	Carbon footprint Scope 1+2+3	2023	211 tCO <sub>2</sub> e / m€ invested	93.78 %	93.39 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.00 % involved in violations	93.78 %	93.78 %
		2022	0.00 % involved in violations	96.85 %	96.85 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	1,536 tCO <sub>2</sub> e	93.78 %	93.39 %
		Scope 2 GHG emissions	1,010 tCO <sub>2</sub> e	93.78 %	93.39 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	93.78 %	93.78 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.25 % without policies	93.78 %	87.22 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	8.24 % pay gap	93.78 %	36.73 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	39.74 % (female directors / total directors)	93.78 %	89.68 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	93.78 %	93.78 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
1 January 2023 -  
31 December 2023

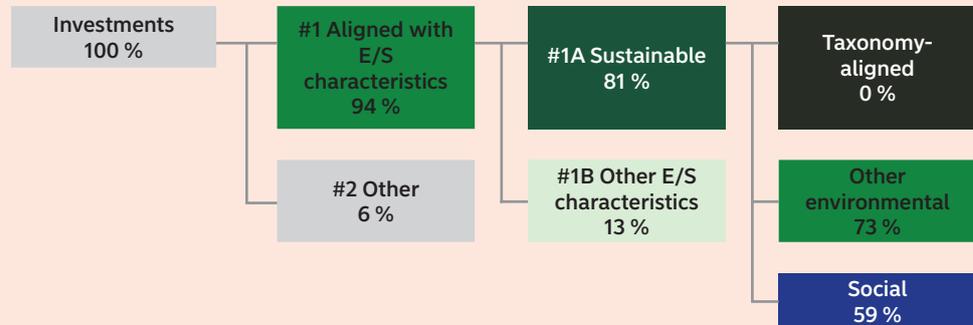

Largest investments	Sector	Assets	Country
Neste	Energy	6.52 %	Finland
Tryg	Financial	6.15 %	Denmark
Novo Nordisk B	Consumer, Non-cyclical	6.15 %	Denmark
Sampo A	Financial	5.84 %	Finland
Epiroc A	Industrial	4.91 %	Sweden
Gjensidige Forsikring	Financial	4.55 %	Norway
Atlas Copco A	Industrial	4.53 %	Sweden
Essity B	Consumer, Non-cyclical	4.40 %	Sweden
Holmen B	Basic Materials	4.13 %	Sweden

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Consumer, Non-cyclical	26.39 %
Financial	23.53 %
Industrial	17.20 %
Basic Materials	8.86 %
Energy	6.91 %
Cash	6.20 %
Consumer, Cyclical	3.81 %
Technology	3.56 %
Communications	3.55 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

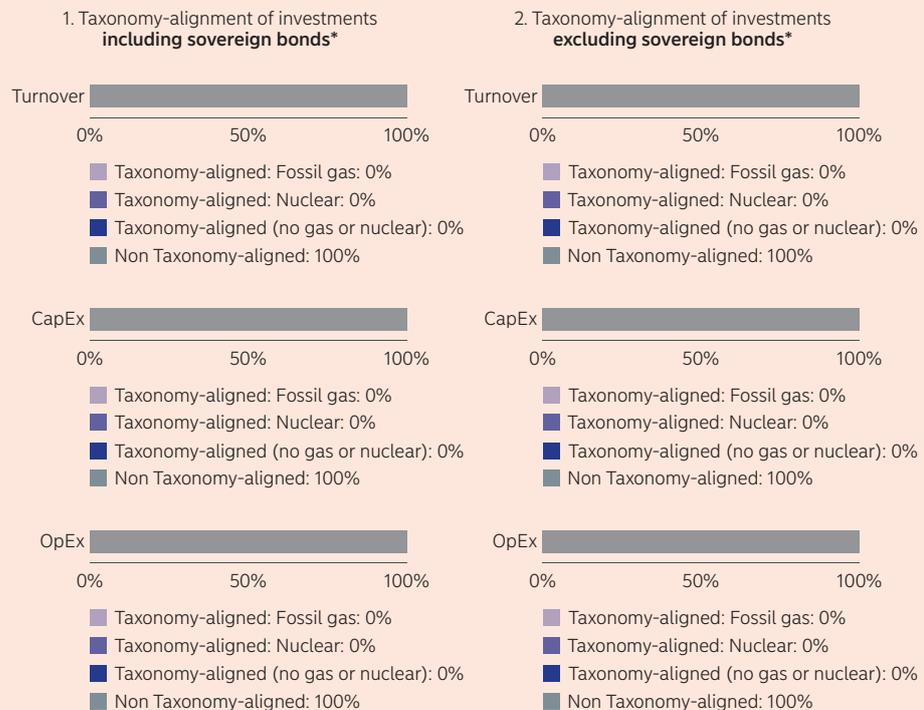

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 73 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 59 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - North American High Yield Stars Bond Fund  
**Legal entity identifier:** 549300PBIZ5BVS2L4E68

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<p><input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes</p>	<p><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No</p>
<p><input type="checkbox"/> It made <b>sustainable investments with an environmental objective:</b> _____%</p> <p style="margin-left: 20px;"><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> _____%</p>	<p><input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 57 % of sustainable investments</p> <p style="margin-left: 20px;"><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input checked="" type="checkbox"/> with a social objective</p> <p><input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b></p>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	78 tCO <sub>2</sub> e / m€ invested	93.09 %	83.71 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	41,894 tCO <sub>2</sub> e	93.09 %	83.71 %
		Scope 2 GHG emissions	13,647 tCO <sub>2</sub> e	93.09 %	83.71 %
		Scope 3 GHG emissions	477,425 tCO <sub>2</sub> e	93.09 %	83.42 %

Enviri Corp 5.75% 31-07-2027	Industrial	0.93 %	United States

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Consumer, Non-cyclical	18.94 %
Communications	18.94 %
Consumer, Cyclical	16.29 %
Industrial	14.13 %
Financial	13.31 %
Cash	5.62 %
Utilities	3.63 %
Basic Materials	3.51 %
Technology	2.99 %
Government bonds	1.29 %
Energy	1.14 %
Diversified	0.20 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

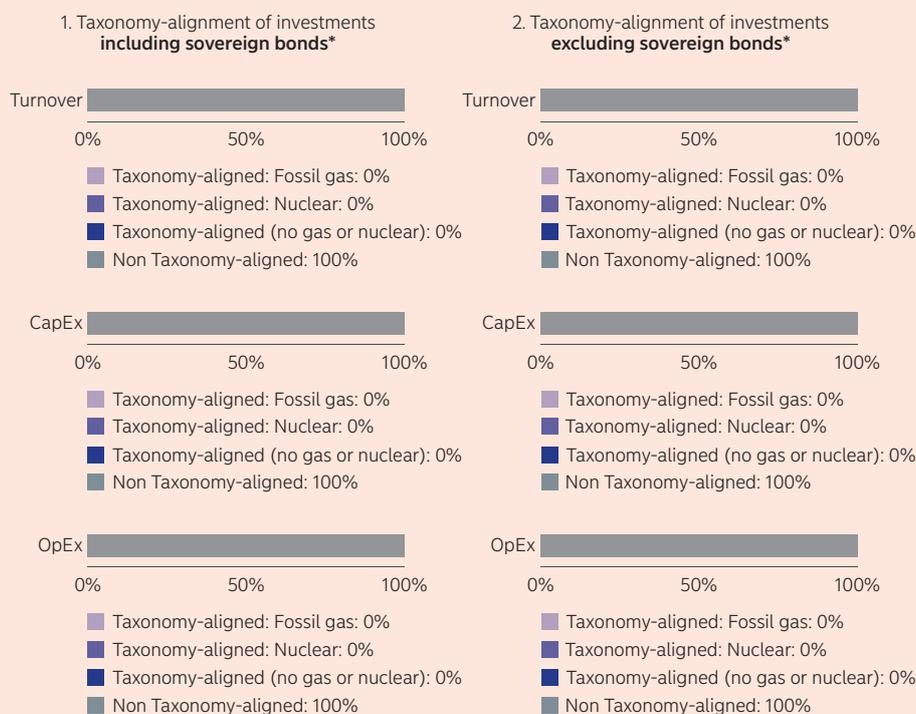

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 54 %.

### **What was the share of socially sustainable investments?**

The share of socially sustainable investments was 47 %.

### **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### **How did this financial product perform compared to the reference benchmark?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - North American Stars Equity Fund

**Legal entity identifier:** 5493000U6GOWJF5BJ788

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 75 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	25 tCO <sub>2</sub> e / m€ invested	97.66 %	97.63 %
	Carbon footprint Scope 1+2+3	149 tCO <sub>2</sub> e / m€ invested	97.66 %	97.63 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	3.79 % involved in violations	97.66 %	97.66 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	3.79 % involved in violations	97.66 %	97.66 %
		2022	4.10 % involved in violations	97.52 %	97.52 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	27,843 tCO <sub>2</sub> e	97.66 %	97.63 %
		Scope 2 GHG emissions	5,350 tCO <sub>2</sub> e	97.66 %	97.63 %
		Scope 3 GHG emissions	167,406 tCO <sub>2</sub> e	97.66 %	97.63 %
		Total GHG emissions Scope 1+2	33,194 tCO <sub>2</sub> e	97.66 %	97.63 %

Mastercard	Financial	1.88 %	United States

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Consumer, Non-cyclical	29.59 %
Technology	25.75 %
Financial	14.35 %
Communications	7.98 %
Industrial	7.49 %
Consumer, Cyclical	7.41 %
Utilities	2.67 %
Basic Materials	2.43 %
Cash	2.34 %
<b>Sum</b>	<b>100.00 %</b>

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

- Yes:
  - In fossil gas
  - In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

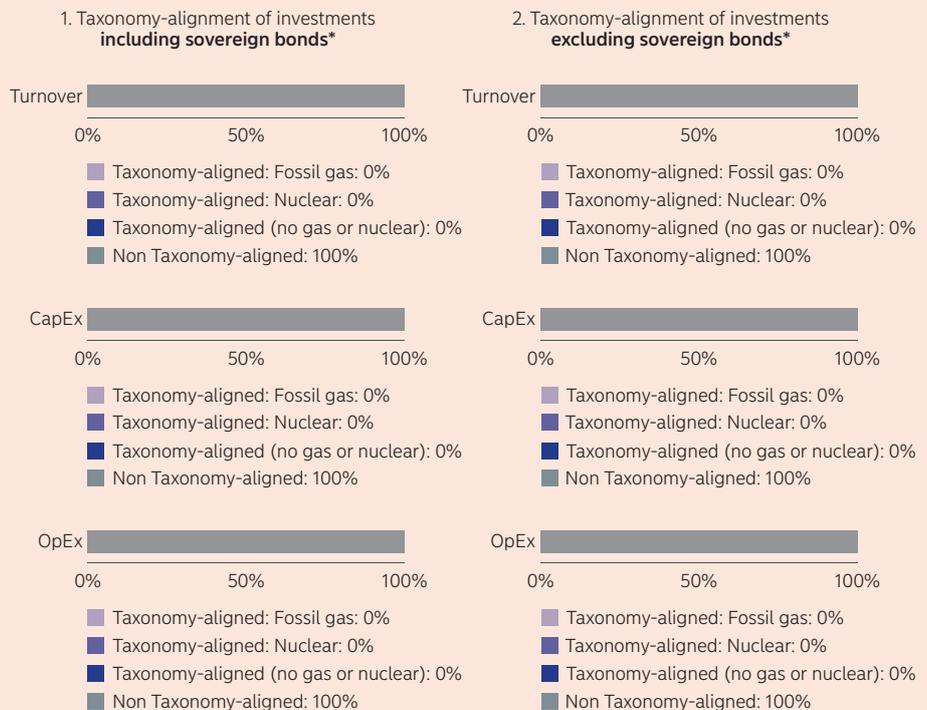

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

**The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 57 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 65 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Norwegian Bond Fund

**Legal entity identifier:** 549300GKKTBJNZU7BJ86

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 43 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invested within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	37 tCO <sub>2</sub> e / m€ invested	92.83 %	58.02 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	7,624 tCO <sub>2</sub> e	92.83 %	58.02 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	66.56 %
Government bonds	12.13 %
Consumer, Non-cyclical	10.22 %
Cash	5.20 %
Utilities	3.31 %
Basic Materials	2.63 %
Energy	1.96 %
Industrial	1.37 %
Consumer, Cyclical	0.34 %
Communications	0.06 %
Derivatives	-3.77 %
<b>Sum</b>	<b>100.00 %</b>

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:  
 In fossil gas       In nuclear energy  
 No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

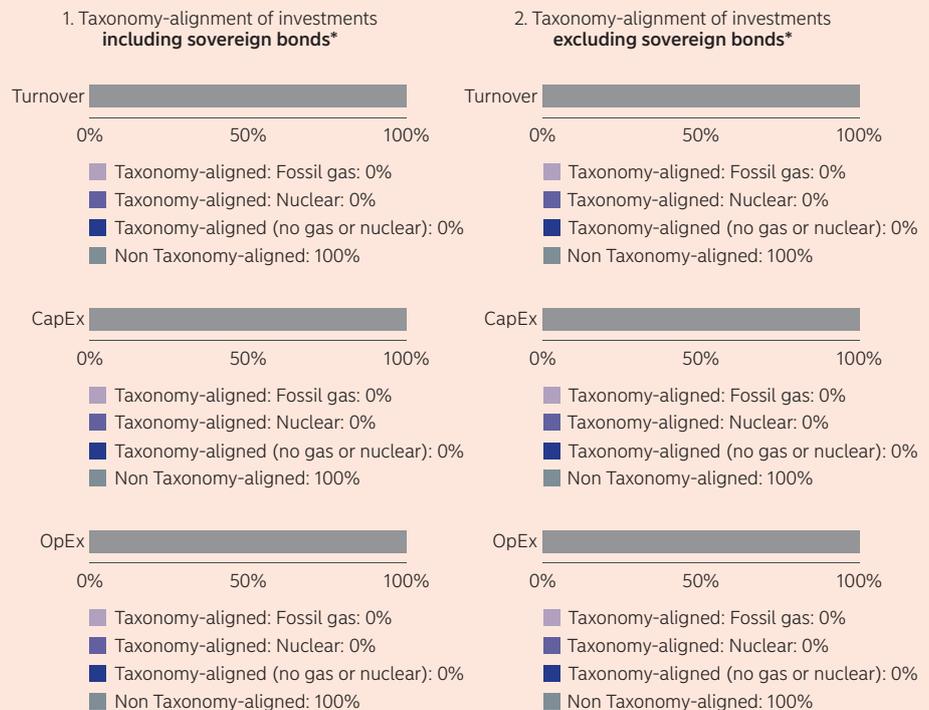

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

**The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 43 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 29 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Norwegian Equity Fund

**Legal entity identifier:** 549300WSP511P7B44508

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 54 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	171 tCO <sub>2</sub> e / m€ invested	98.78 %	94.83 %
	Carbon footprint Scope 1+2+3	1,425 tCO <sub>2</sub> e / m€ invested	98.78 %	94.72 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	98.78 %	96.74 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	171 tCO <sub>2</sub> e / m€ invested	98.78 %	94.83 %
		2022	242 tCO <sub>2</sub> e / m€ invested	98.37 %	90.50 %
	Carbon footprint Scope 1+2+3	2023	1,425 tCO <sub>2</sub> e / m€ invested	98.78 %	94.72 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.00 % involved in violations	98.78 %	96.74 %
		2022	0.00 % involved in violations	98.37 %	95.56 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	12,025 tCO <sub>2</sub> e	98.78 %	94.83 %
		Scope 2 GHG emissions	1,758 tCO <sub>2</sub> e	98.78 %	94.83 %
		Scope 3 GHG emissions	100,215 tCO <sub>2</sub> e	98.78 %	94.72 %
		Total GHG emissions Scope 1+2	13,783 tCO <sub>2</sub> e	98.78 %	94.83 %
		Total GHG emissions Scope 1+2+3	113,903 tCO <sub>2</sub> e	98.78 %	94.72 %
	Carbon footprint	Carbon footprint	171 tCO <sub>2</sub> e / m€ invested	98.78 %	94.83 %
		Carbon footprint Scope 1+2+3	1,425 tCO <sub>2</sub> e / m€ invested	98.78 %	94.72 %
	GHG intensity of investee companies	GHG intensity of investee companies	283 tCO <sub>2</sub> e / m€ of owned revenue	98.78 %	94.83 %
		GHG intensity of investee companies Scope 1+2+3	1,917 tCO <sub>2</sub> e / m€ of owned revenue	98.78 %	94.49 %
	Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	19.00 % investments in fossil fuels	98.78 %	95.39 %
	Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources	71.80 % non-renewable energy consumption	98.78 %	73.68 %
			0.00 % non-renewable energy production	98.78 %	0.00 %

## CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	Energy consumption intensity per high impact climate sector	Agriculture forestry and fishing (A)	0.23 GWh / m€ of revenue	3.09 %	2.85 %
		Mining and quarrying (B)	0.74 GWh / m€ of revenue	21.54 %	19.48 %
		Manufacturing (C)	2.34 GWh / m€ of revenue	27.17 %	27.01 %
		Electricity gas steam and air conditioning supply (D)	0.00 GWh / m€ of revenue	0.81 %	0.81 %
		Water supply sewerage waste management and remediation activities (E)	0.81 GWh / m€ of revenue	0.31 %	0.17 %
		Construction (F)	1.02 GWh / m€ of revenue	3.35 %	2.00 %
		Wholesale and retail trade repair of motor vehicles and motorcycles (G)	0.05 GWh / m€ of revenue	6.95 %	1.85 %
		Transportation and storage (H)	5.12 GWh / m€ of revenue	3.60 %	3.27 %
		Real estate activities (L)	0.43 GWh / m€ of revenue	2.30 %	2.30 %
		Biodiversity	Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas	0.00 % with negative impact
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.09 tons / m€ invested	98.78 %	26.40 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	18.09 tons / m€ invested	98.78 %	85.74 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	98.78 %	96.74 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % without policies	98.78 %	80.56 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	8.12 % pay gap	98.78 %	50.61 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	42.10 % (female directors / total directors)	98.78 %	76.94 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	98.78 %	96.37 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

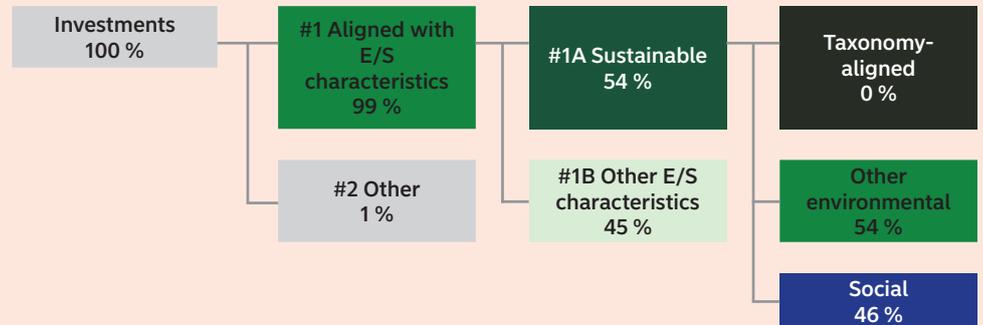

Largest investments	Sector	Assets	Country
Aker BP	Energy	9.14 %	Norway
Equinor	Energy	6.98 %	Norway
Yara International	Basic Materials	6.70 %	Norway
Mowi	Consumer, Non-cyclical	5.90 %	Norway
DNB Bank	Financial	4.50 %	Norway
Atea	Communications	4.28 %	Norway
Borregaard	Basic Materials	4.23 %	Norway
SpareBank 1 SMN	Financial	3.89 %	Norway
Bouvet	Technology	3.60 %	Norway

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	25.29 %
Energy	19.97 %
Consumer, Non-cyclical	14.68 %
Basic Materials	14.19 %
Industrial	10.24 %
Communications	6.17 %
Technology	3.61 %
Consumer, Cyclical	3.19 %
Utilities	1.43 %
Cash	1.22 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

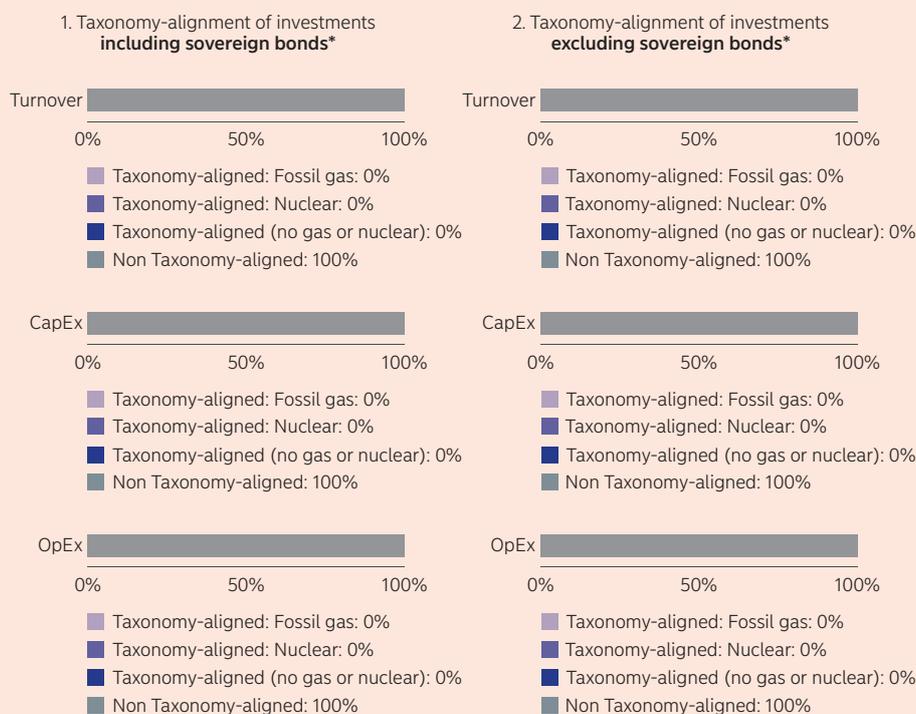

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 54 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 46 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Norwegian Short-Term Bond Fund

**Legal entity identifier:** 5493005DOEAQ8S1TVI86

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 50 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invested within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	46 tCO <sub>2</sub> e / m€ invested	98.51 %	68.27 %
	Carbon footprint Scope 1+2+3	526 tCO <sub>2</sub> e / m€ invested	98.51 %	68.27 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	10,160 tCO <sub>2</sub> e	98.51 %	68.27 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	78.56 %
Consumer, Non-cyclical	6.38 %
Basic Materials	2.72 %
Energy	2.60 %
Government bonds	2.48 %
Utilities	2.39 %
Consumer, Cyclical	1.55 %
Cash	1.49 %
Industrial	1.39 %
Communications	0.43 %
Derivatives	0.00 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

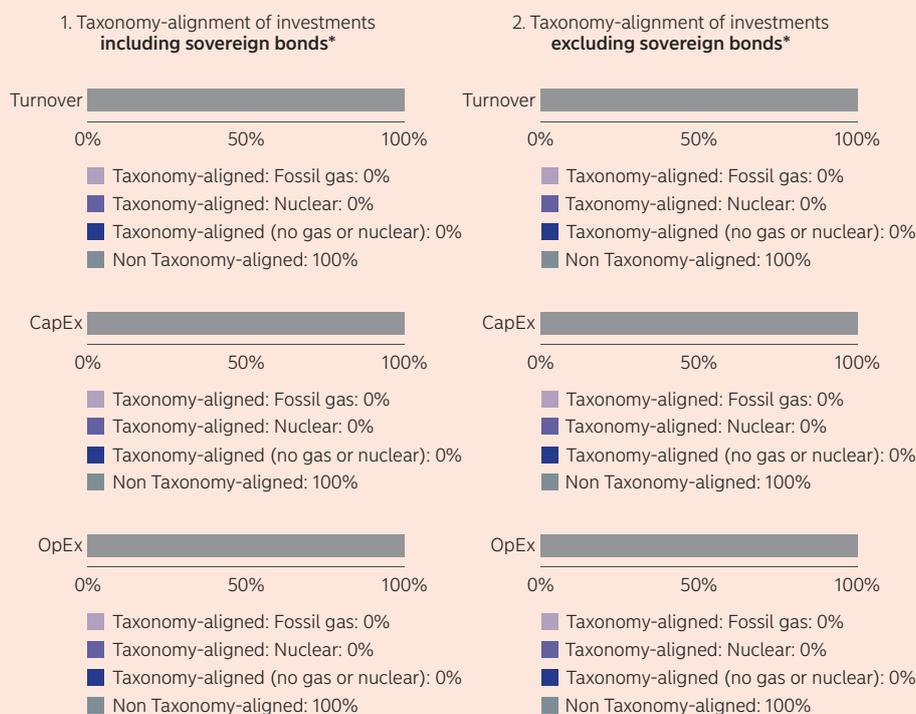

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 50 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 36 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Social Bond Fund

**Legal entity identifier:** 5493004IMYMC8GBWWX21

### Sustainable investment objective

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** 17 %

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** 97 %

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent was the sustainable investment objective of this financial product met?

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

The fund had a sustainable objective to provide financing for initiatives that were funded through the issuance of social bonds. At least 70% of the fund's total assets were invested in social bonds that comply with ICMA social Bond Principles, which provide verified standards for social bonds. The remaining part of the fund's assets may have been invested in green bonds and other bonds that contributed to a sustainable investment objective and did not significantly harm other social or environmental objectives and follow good governance practices.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the sustainable investment objective of the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
% of total investments in bonds complying with the ICMA or similar Social Bond Principles Standard	Green Bond Principles, Social Bond Principles, Sustainability Bond Guidelines and Sustainability-Linked Bond Principles measure the share of investments that are aligned with standards set by the International Capital Market Association (ICMA). Alignment with Climate Bonds Initiative is used to measure the share of investments that are aligned with standards set by the Climate Bonds Initiative which is an international organization working on mobilizing global capital for climate actions via climate bond standards, certified scheme, policy engagement and market intelligence work.	45.89 % of Asset under Management	97.77 %	48.59 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● ...and compared to previous periods?

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
% of total investments in bonds complying with the ICMA or similar Social Bond Principles Standard	Green Bond Principles, Social Bond Principles, Sustainability Bond Guidelines and Sustainability-Linked Bond Principles measure the share of investments that are aligned with standards set by the International Capital Market Association (ICMA). Alignment with Climate Bonds Initiative is used to measure the share of investments that are aligned with standards set by the Climate Bonds Initiative which is an international organization working on mobilizing global capital for climate actions via climate bond standards, certified scheme, policy engagement and market intelligence work.	2023	45.89 % of Asset under Management	97.77 %	48.59 %
		2022	81.01 % of Asset under Management	96.33 %	96.33 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments not cause significant harm to any sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	83 tCO <sub>2</sub> e	92.76 %	72.88 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

### ● In which economic sectors were the investments made?

Sector	Assets
Financial	38.46 %
Government bonds	38.29 %
Consumer, Non-cyclical	12.04 %
Communications	5.28 %
Cash	2.11 %
Technology	1.92 %
Industrial	0.91 %
Utilities	0.87 %
FX Forwards	0.12 %
Derivatives	0.00 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

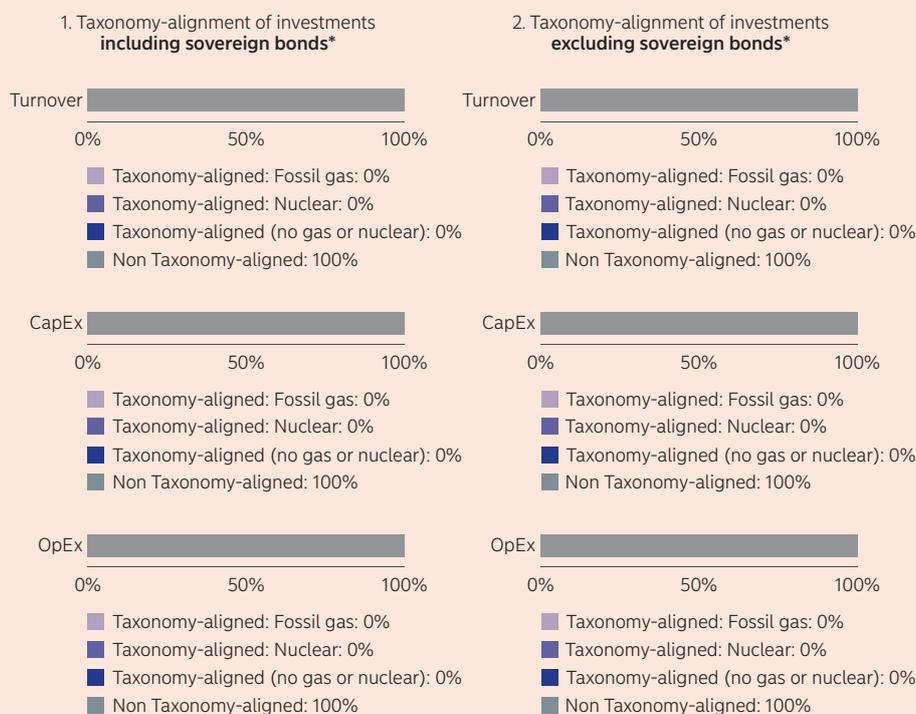

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas       In nuclear energy
- No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 17 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 97 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the 'Fund Descriptions' in the prospectus. Minimum environmental and social safeguards were applicable to derivatives linked to a single underlying entity to exclude companies and issuers subject to international sanctions, as well as entities that were involved in serious breaches of international norms, where engagement is deemed not to be possible or effective. No minimum safeguards applied to cash or other types of derivatives.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain the sustainable investment objective by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Stable Emerging Markets Equity Fund

**Legal entity identifier:** 549300WZ0EJWOK2LBI46

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 60 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	91 tCO <sub>2</sub> e / m€ invested	98.47 %	97.82 %
	Carbon footprint Scope 1+2+3	517 tCO <sub>2</sub> e / m€ invested	98.47 %	97.82 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.36 % involved in violations	98.47 %	98.46 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

Sustainability Indicator	Metric	Reference Period	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	2023	91 tCO <sub>2</sub> e / m€ invested	98.47 %	97.82 %
		2022	98 tCO <sub>2</sub> e / m€ invested	98.39 %	97.50 %
	Carbon footprint Scope 1+2+3	2023	517 tCO <sub>2</sub> e / m€ invested	98.47 %	97.82 %
		2022	N/A	N/A	N/A
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2023	0.36 % involved in violations	98.47 %	98.46 %
		2022	0.37 % involved in violations	98.39 %	98.39 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	23,645 tCO <sub>2</sub> e	98.47 %	97.82 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Consumer, Non-cyclical	23.76 %
Financial	19.36 %
Communications	16.97 %
Utilities	12.36 %
Technology	8.30 %
Industrial	6.47 %
Consumer, Cyclical	5.17 %
Energy	3.21 %
Basic Materials	2.39 %
Cash	1.53 %
Diversified	0.48 %
<b>Sum</b>	<b>100.00 %</b>

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:  
 In fossil gas       In nuclear energy  
 No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

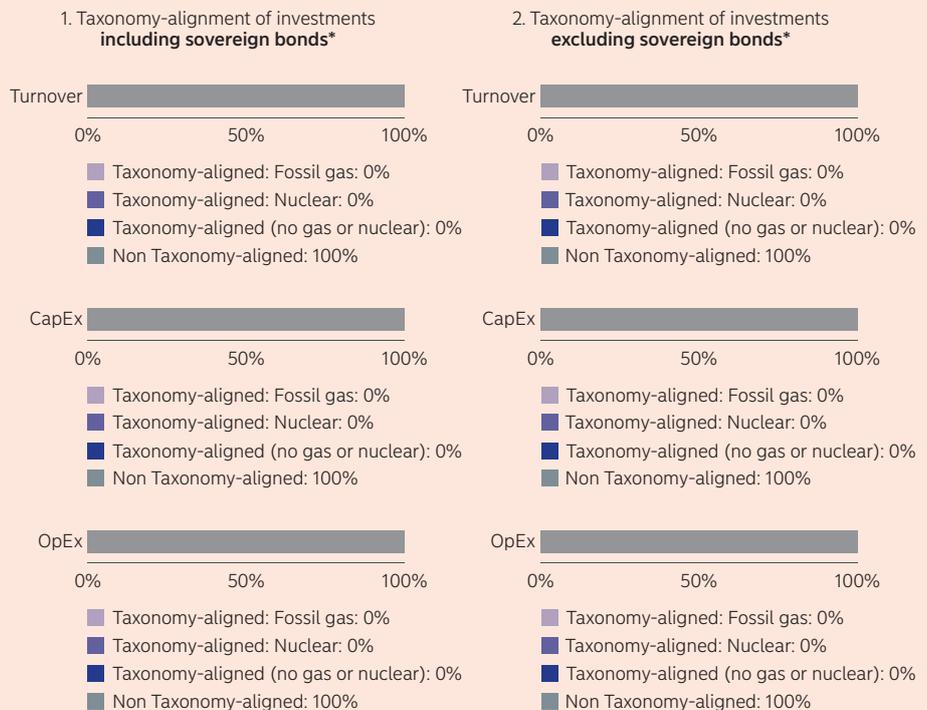

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

**The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 54 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 43 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Stable Return Fund

**Legal entity identifier:** 549300J9YLZQT0W3Z531

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 65 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	14 tCO <sub>2</sub> e / m€ invested	92.45 %	91.95 %
	Carbon footprint Scope 1+2+3	133 tCO <sub>2</sub> e / m€ invested	92.45 %	91.95 %
Investee countries subject to social violations (absolute and relative)	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	1.37 %	1.37 %
		0.00 % investee countries subject to violations	1.37 %	1.37 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.78 % involved in violations	92.45 %	92.27 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	46,523 tCO <sub>2</sub> e	92.45 %	91.95 %
		Scope 2 GHG emissions	25,213 tCO <sub>2</sub> e	92.45 %	91.95 %
		Scope 3 GHG emissions	607,338 tCO <sub>2</sub> e	92.45 %	91.95 %
		Total GHG emissions Scope 1+2	71,735 tCO <sub>2</sub> e	92.45 %	91.95 %
		Total GHG emissions Scope 1+2+3	679,074 tCO <sub>2</sub> e	92.45 %	91.95 %

		Electricity gas steam and air conditioning supply (D)	4.55 GWh / m€ of revenue	2.03 %	2.03 %
		Water supply sewerage waste management and remediation activities (E)	0.67 GWh / m€ of revenue	0.59 %	0.59 %
		Construction (F)	0.17 GWh / m€ of revenue	1.46 %	1.46 %
		Wholesale and retail trade repair of motor vehicles and motorcycles (G)	0.81 GWh / m€ of revenue	6.19 %	6.19 %
		Transportation and storage (H)	0.13 GWh / m€ of revenue	1.24 %	1.24 %
		Real estate activities (L)	0.00 GWh / m€ of revenue	0.00 %	0.00 %
		Biodiversity	Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas	0.68 % with negative impact
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.00 tons / m€ invested	92.45 %	1.85 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	1.10 tons / m€ invested	92.45 %	70.68 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.78 % involved in violations	92.45 %	92.27 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.05 % without policies	92.45 %	90.51 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	8.04 % pay gap	92.45 %	46.36 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	36.22 % (female directors / total directors)	92.45 %	91.60 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	92.45 %	91.34 %

## INDICATORS APPLICABLE TO INVESTMENTS IN SOVEREIGNS AND SUPRANATIONAL

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Environmental	GHG Intensity for sovereigns	GHG intensity of investee countries	343.50 tCO <sub>2</sub> e / m€ of GDP	1.37 %	1.37 %
Social	Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	1.37 %	1.37 %
			0.00 % investee countries subject to violations	1.37 %	1.37 %
Governance	Non-cooperative tax jurisdictions	Investments in jurisdictions on the EU list of non-cooperative jurisdictions for tax purposes	0.00 % investee countries subject to violations	1.37 %	1.37 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

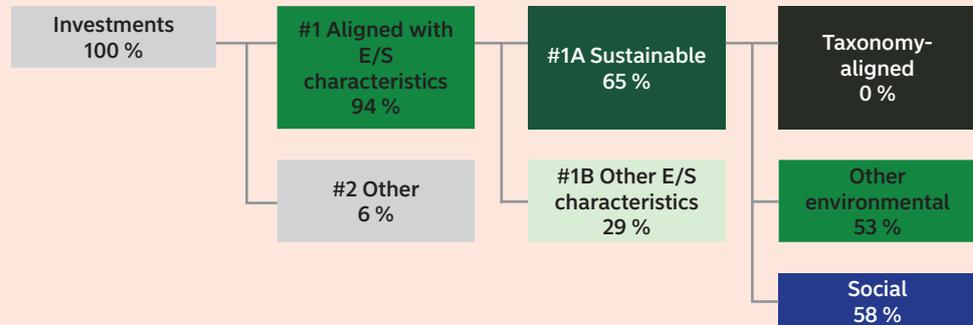

Largest investments	Sector	Assets	Country
Microsoft	Technology	4.77 %	United States
Alphabet	Communications	4.32 %	United States
Johnson & Johnson	Consumer, Non-cyclical	2.68 %	United States
Coca-Cola	Consumer, Non-cyclical	2.60 %	United States
Novo Nordisk B	Consumer, Non-cyclical	2.25 %	Denmark
Visa	Financial	2.22 %	United States
Automatic Data Processing	Consumer, Non-cyclical	1.87 %	United States
Cisco Systems	Communications	1.73 %	United States
Adobe	Technology	1.67 %	United States
Monster Beverage	Consumer, Non-cyclical	1.56 %	United States
Accenture	Technology	1.55 %	Ireland
Mastercard	Financial	1.53 %	United States
Cigna Group/The	Consumer, Non-cyclical	1.49 %	United States
PepsiCo	Consumer, Non-cyclical	1.48 %	United States
Comcast	Communications	1.47 %	United States

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Consumer, Non-cyclical	35.36 %
Technology	15.35 %
Communications	13.64 %
Financial	12.85 %
Consumer, Cyclical	7.65 %
Cash	6.10 %
Industrial	4.58 %
Utilities	2.17 %
Government bonds	1.49 %
Basic Materials	0.53 %
Energy	0.20 %
FX Forwards	0.08 %
Derivatives	0.00 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

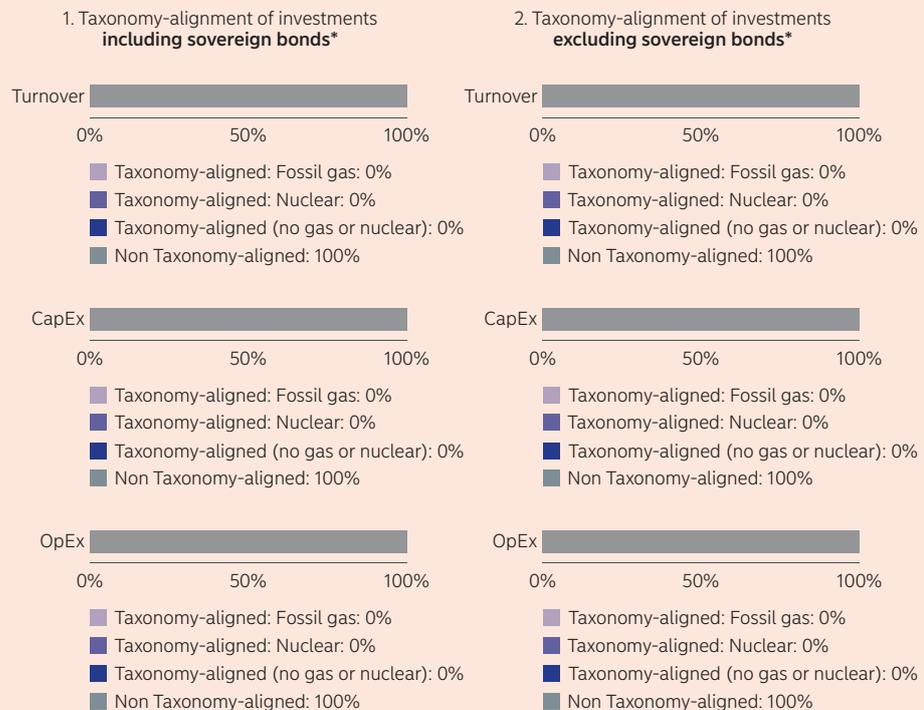

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● **What was the share of investments made in transitional and enabling activities?**

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 53 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 58 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Swedish Bond Fund

**Legal entity identifier:** 549300UUOKOX2ZFY6A72

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 36 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invested within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	3 tCO <sub>2</sub> e / m€ invested	79.91 %	75.72 %

		2022	99.17 tCO <sub>2</sub> e / m€ of owned GDP	20.13 %	20.13 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	59 tCO <sub>2</sub> e	79.91 %	75.72 %
		Scope 2 GHG emissions	29 tCO <sub>2</sub> e	79.91 %	75.72 %

Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.00 tons / m€ invested	79.91 %	2.24 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.28 tons / m€ invested	79.91 %	46.02 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION  
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	79.91 %	73.47 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance / complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % without policies	79.91 %	52.85 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	15.74 % pay gap	79.91 %	21.59 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	40.81 % (female directors / total directors)	79.91 %	65.82 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00 % involvement	79.91 %	71.92 %

## INDICATORS APPLICABLE TO INVESTMENTS IN SOVEREIGNS AND SUPRANATIONAL

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Environmental	GHG Intensity for sovereigns	GHG intensity of investee countries	117.74 tCO <sub>2</sub> e / m€ of GDP	18.58 %	18.58 %
Social	Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	18.58 %	18.58 %
			0.00 % investee countries subject to violations	18.58 %	18.58 %
Governance	Non-cooperative tax jurisdictions	Investments in jurisdictions on the EU list of non-cooperative jurisdictions for tax purposes	0.00 % investee countries subject to violations	18.58 %	18.58 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

## What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2023 - 31 December 2023

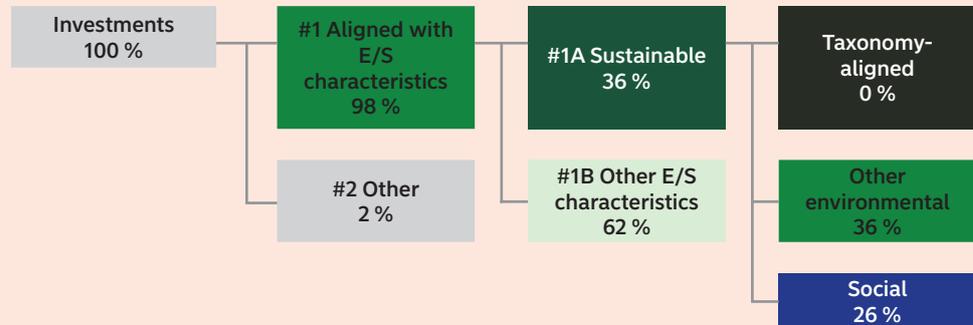

Largest investments	Sector	Assets	Country
Sweden Government Bond 3.5% 30-03-2039	Government	9.41 %	Sweden
Stadshypotek AB 2% 01-09-2028	Financial	5.25 %	Sweden
Hexagon AB FRN 31-05-2024	Industrial	4.44 %	Sweden
Nordea Bank Abp FRN 18-08-2031	Financial	4.33 %	Finland
Lansforsakringar Hypotek AB 0.5% 20-09-2028	Financial	4.32 %	Sweden
Sparbanken Skane AB 0.58% 21-01-2026	Financial	4.19 %	Sweden
Landshypotek Bank AB 0.615% 18-11-2025	Financial	4.14 %	Sweden
SBAB Bank AB FRN 03-06-2030	Financial	4.03 %	Sweden
Skandiabanken AB FRN 23-08-2024	Financial	3.66 %	Sweden
Sandvik AB 1.238% 18-02-2025	Industrial	3.40 %	Sweden

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	58.07 %
Government bonds	21.57 %
Consumer, Cyclical	8.89 %
Industrial	7.84 %
Consumer, Non-cyclical	2.12 %
Cash	1.47 %
Derivatives	0.04 %
FX Forwards	0.00 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

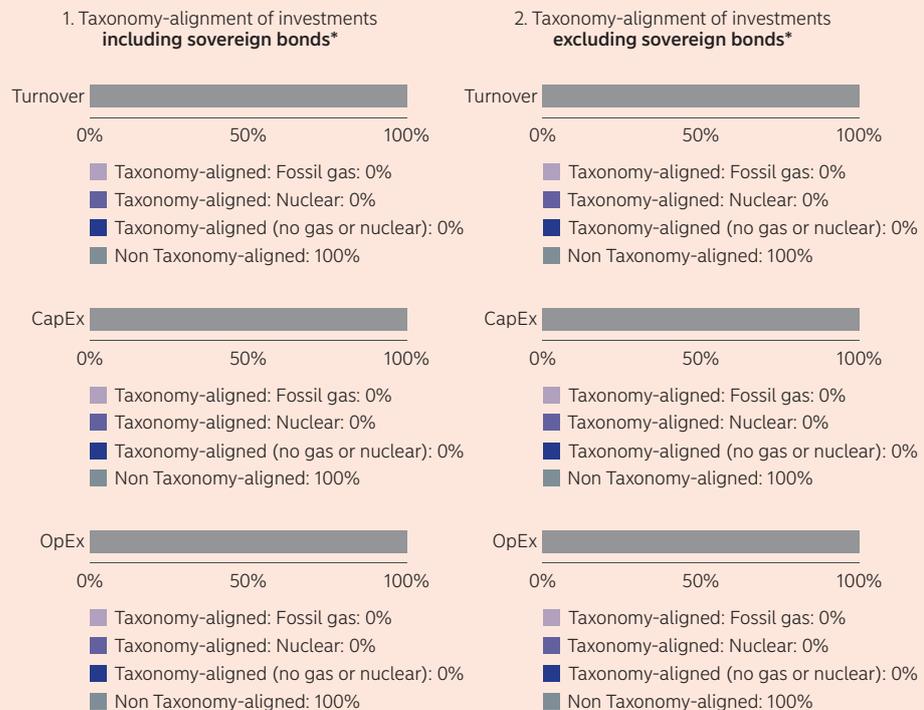

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 36 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 26 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Nordea 1 - Swedish Short-Term Bond Fund

**Legal entity identifier:** 549300EYJ804J45M4043

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 46 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

The fund invested within an investment universe that generally exhibits a high level of ESG performance across constituents. Consequently, the screenings that apply to the strategy have limited impact on the investment universe and the actual investments of the fund, and only serve as an assurance that underlying investments consistently represent the expected ESG characteristics of the asset class.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	16 tCO <sub>2</sub> e / m€ invested	99.15 %	85.03 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	782 tCO <sub>2</sub> e	99.15 %	85.03 %
		Scope 2 GHG emissions	433 tCO <sub>2</sub> e	99.15 %	85.03 %

Indutrade AB FRN 26-09-2024	Industrial	3.72 %	Sweden

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	50.76 %
Industrial	23.78 %
Consumer, Non-cyclical	12.99 %
Utilities	5.86 %
Basic Materials	3.54 %
Consumer, Cyclical	2.23 %
Cash	0.85 %
FX Forwards	0.00 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

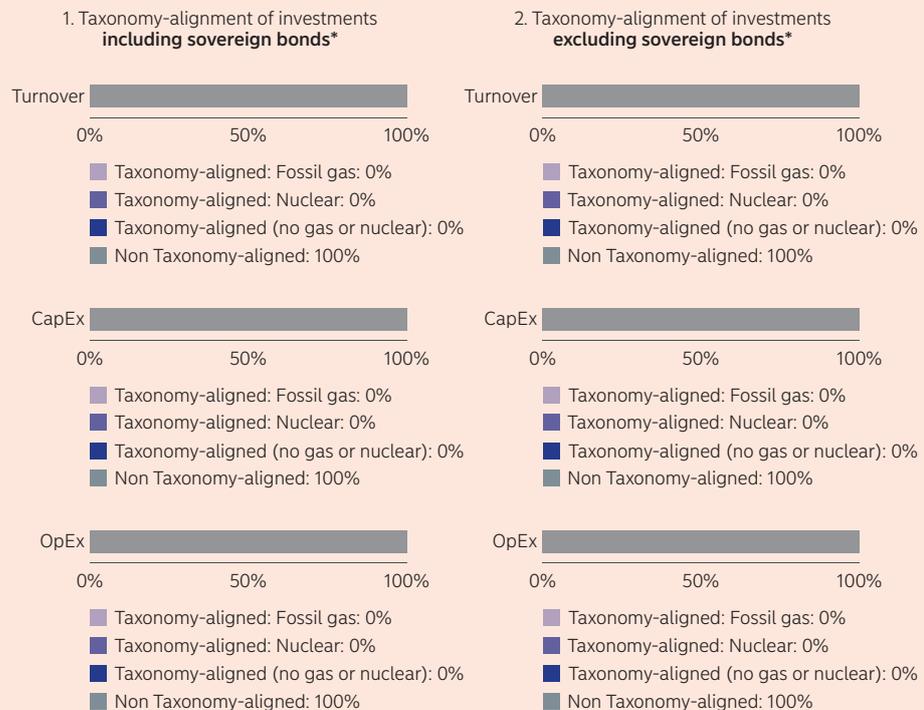

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 41 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 37 %.

### What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the "Fund Descriptions" in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - US Corporate Stars Bond Fund

**Legal entity identifier:** 549300V3BOFEO3N8NJ79

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

**Yes**

**No**

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 60 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Minimum proportion of sustainable investments** The fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**ESG scoring** The fund promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	125 tCO <sub>2</sub> e / m€ invested	93.69 %	92.52 %
	Carbon footprint Scope 1+2+3	567 tCO <sub>2</sub> e / m€ invested	93.69 %	92.52 %
Investee countries subject to social violations (absolute and relative)	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	5.43 %	5.43 %
		0.00 % investee countries subject to violations	5.43 %	5.43 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.08 % involved in violations	93.69 %	88.55 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	144,065 tCO <sub>2</sub> e	93.69 %	92.52 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

<b>Sector</b>	<b>Assets</b>
Financial	34.56 %
Consumer, Non-cyclical	15.36 %
Consumer, Cyclical	10.63 %
Communications	9.30 %
Utilities	8.58 %
Technology	7.64 %
Industrial	5.75 %
Government bonds	5.43 %
Mortgage securities	1.03 %
Cash	0.87 %
Basic Materials	0.84 %
Derivatives	0.00 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

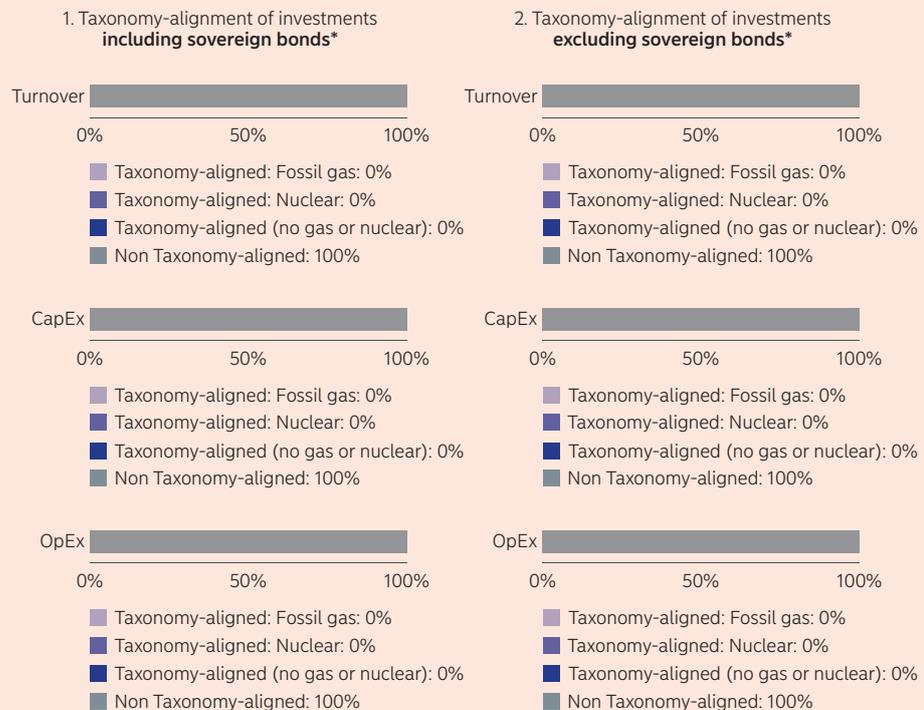

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 54 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 53 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

## ANNEX IV

**Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Nordea 1 - US Total Return Bond Fund

**Legal entity identifier:** 549300MO84XW9D10JW85

### Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

**Yes**

**No**

It made **sustainable investments with an environmental objective:** \_\_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 20 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The E/S characteristics promoted could be environmental and/or social and included the following features:

**Sustainable investments** Although the fund has not committed to make any sustainable investments, the fund promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

**Sector- and value-based exclusions** The fund promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

**Nordea Asset Management's Paris-Aligned Fossil Fuel Policy** The fund promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the fund was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the fund.

### ● How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint	0 tCO <sub>2</sub> e / m€ invested	82.80 %	32.98 %
	Carbon footprint Scope 1+2+3	4 tCO <sub>2</sub> e / m€ invested	82.80 %	32.98 %
Investee countries subject to social violations (absolute and relative)	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	15.89 %	15.89 %
		0.00 % investee countries subject to violations	15.89 %	15.89 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00 % involved in violations	82.80 %	18.19 %
Greenhouse Gas Intensity for sovereigns	GHG intensity of investee countries	343.52 tCO <sub>2</sub> e / m€ of GDP	15.89 %	15.89 %

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **...and compared to previous periods?**

**Eligibility:** The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

**Coverage:** The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the fund partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they do not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

**- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

*The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

*The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this fund were:

### CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	1 tCO <sub>2</sub> e	82.80 %	32.98 %

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● What was the asset allocation?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

### ● In which economic sectors were the investments made?

Sector	Assets
Mortgage securities	72.08 %
Government bonds	15.89 %
Asset backed Securities	10.36 %
Cash	1.30 %
Funds	0.27 %
Consumer, Cyclical	0.09 %
<b>Sum</b>	<b>100.00 %</b>

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

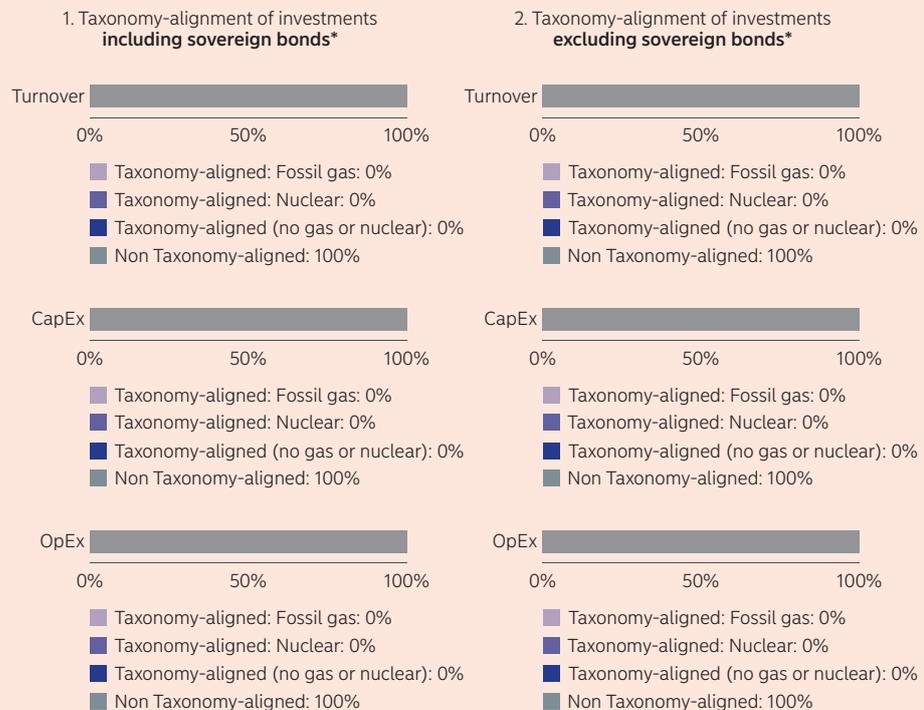

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0.00 %
Enabling activities	0.00 %
<b>Sum</b>	<b>0.00 %</b>

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2023	0.00 %
2022	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 20 %.

### What was the share of socially sustainable investments?

The share of socially sustainable investments was 20 %.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The fund may have used derivatives and other techniques for the purposes described in the “Fund Descriptions” in the prospectus. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this fund have been monitored and documented on an ongoing basis.

### How did this financial product perform compared to the reference benchmark?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

Subject to Italian law and custom, a paying agent in Italy may distribute fund shares through a saving plan. Retail investors residing in Italy can direct a paying agent in that country to either submit dealing requests to the SICAV on their behalf (grouped by fund or distributor), register shares in the name of the retail investor or a nominee, and perform all services relating to the exercise of shareholder rights. See the Italian application form for details.
