Specification of procedures for the valuation of assets**Valuation**

In accordance with the provisions of the German Capital Investment Accounting and Valuation Ordinance (KARBV), ODDO BHF Asset Management GmbH (ODDO BHF AM GmbH) as a capital management company (KVG) shall use suitable processes to update the valuation prices used in-house for all instruments held on a daily basis.

Valuation prices are maintained independently of trading.

To account for the diversity of the different instruments, the procedures used shall be presented to a pricing committee at regular intervals, reviewed and adjusted if necessary. The pricing committee has the following responsibilities and objectives:

Responsibilities

- Determination of the valuation processes and the price sources of the individual asset classes
- Regular review of the specified evaluation/monitoring processes (e.g. in the case of missing prices, significant price movements, stale prices and the preferred price sources)
- Decisions on how to proceed in the case of valuations that deviate from the standard process
- Decisions on valuation procedures in special cases (e.g. illiquid securities)

Objectives

- Communication of the existing processes for determining the valuation prices to the departments involved
- Ongoing optimisation of the processes for determining the valuation prices

When set up, each instrument is assigned to a price supply process according to its individual characteristics. This includes the determination of the data supplier, the update interval, the selection of the price sources and the general procedure.

In addition to automated interface deliveries via Bloomberg and Reuters, other suitable price and valuation sources are also used to value instruments. This applies to cases where no adequate valuations are available from the standard price sources. In addition, valuations from arrangers (e.g. in the case of asset-backed securities) can be accessed.

Standardised test routines for quality assurance have been implemented to ensure continuous, high-quality price supply.

Valuations of individual assets are carried out as follows:

Assets admitted to trading on a stock exchange or included in an organised market

Assets which are admitted to trading on a stock exchange or admitted or included in another organised market and drawing rights are valued at their last tradable price available, unless specified otherwise.

Assets not admitted to a stock exchange or included in an organised market or that have no tradable price

Assets which are neither admitted to trading on a stock exchange nor admitted to or included in another organised market or for which no tradable price is available, are valued at their current fair market value as is reasonably assessed with care using appropriate valuation models unless specified otherwise. Market value is considered to be the amount for which the asset concerned could be exchanged in a transaction between knowledgeable, willing and independent counterparties.

Unlisted debt securities and borrower's note loans (Schuldscheindarlehen)

Debt securities which are not admitted to trading on a stock exchange or admitted to or included in another organised market, such as unlisted bonds, commercial papers and certificates of deposit, and borrower's note loans, are valued based on the prices agreed for comparable debt securities and borrower's note loans and the fair market value of debt securities issued by comparable issuers of a comparable maturity and interest rate, discounted to allow for the reduced liquidity as the case may be.

Money market instruments

In the case of money market instruments, the KVG may calculate the unit price, including future interest and interest components, up to and including the calendar day before the value date. The accrued interest per investment to be recorded on the income side must be taken into account. On the expenses side, all KVG services not yet due but which affect the unit price can also be included, such as management fees, custodian fees, auditing costs, publication costs, etc.

Interest, income equivalent to interest, and expenses for the money market instruments in the Fund (e.g. management fee, custodian fee, auditing fees, costs of publication, etc.) may be included up to and including the day before the value date.

Options and futures contracts

The options belonging to the Fund and the liabilities from options granted to third parties that are admitted to trading on a stock exchange or included in another organised market are valued at their respective last tradable price, which ensures a reliable valuation.

This also applies to receivables and liabilities from futures contracts sold for the account of the Fund. Any margin calls paid on behalf of the Fund are added to the value of the Fund, taking into account any valuation gains and valuation losses determined on the relevant exchange trading day.

Bank deposits, time deposits, investment units and loans

Bank deposits are valued in principle at their net value plus interest accrued.

Time deposits are valued at fair market value, provided they can be terminated at any time and are not refunded at nominal value plus interest when terminated.

Investment units are valued in principle at their last redemption price set or last tradable price ensuring a reliable valuation. If no such valuations are available, investment units are valued at their current fair market value as is reasonably assessed with care using appropriate valuation models, taking current market conditions into account.

The redemption claims from lending activities are governed by the market value of the assets transferred on loan.

Assets denominated in foreign currencies

Assets denominated in foreign currencies are to be calculated on the day of valuation at the 5:00 p.m. fixing time for World Market Rates (source: Datastream).
