

# Key Investor Information

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

## "HKD D2 Income Plus Units", a unit class of Global High Yield (the Fund), a sub-fund of Principal Global Investors Funds (the Trust) (ISIN: IE00BKHY2756)

This Fund is managed by Principal Global Investors (Ireland) Limited (the Manager), part of The Principal Financial Group of companies

### Objectives and investment policy

The Fund seeks to provide a return consisting of income and, over the long term, capital growth.

The Fund seeks to add value primarily through value identification, downside protection, and risk diversification. Investment ideas are generated through internal research efforts, which are supplemented by external sources.

The Fund invests the majority of its assets in a portfolio of US dollar denominated public and private issued high-yield fixed income securities issued by US and Canadian issuers. The Fund may also invest globally in public and private issued high-yield fixed income securities, such as fixed interest rate corporate bonds or Rule 144A securities. These securities will generally be rated below investment grade.

The Fund may also invest in "real estate investment trusts" (REITs) or other REIT-like structures which will be the equivalent of REITs.

The Fund may also invest in UCITS eligible Funds in order to obtain its objective.

The Fund seeks to exclude investment in companies or issuers where their revenue is significantly derived from products that are considered unsuitable taking into account certain environmental, social, and corporate governance ("ESG") criteria of the Investment Adviser.

While it is generally intended for the Fund to be fully invested at all times, there may be a portion of assets held in cash or deposits at any given time.

Any income received by the share class will be distributed.

You may buy or sell units on demand on each Dealing Day being a Business Day as defined in the Fund's supplement (which together with the prospectus constitutes the Prospectus).

The Fund is actively managed and aims to outperform the ICE BofA Merrill Lynch Global High Yield USD Hedged Index (the "Index"). The portfolio manager may reference the Index as part of the investment management process, and it is also considered as part of the investment risk monitoring process. However, the portfolio manager maintains full discretion to select investments for the Fund in line with the above investment policy.

Please see the section entitled Investment Objective, Policies, Strategy and Profile of a Typical Investor of the Supplement where full details are disclosed.

### Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

This Fund is ranked at 4 because funds of this type have experienced average rises and falls in value in the past.

The following are risks materially relevant that are not captured by the SRRl:

- The Fund may utilise a number of derivative instruments in managing the Investment Objective of the Fund. The primary risks associated with the use of such instruments are credit risk, counterparty risk and collateral risk.
- There are specific risks associated with investments in emerging markets, resulting from potentially less developed market practices. These include legal, political and fiscal instability, settlement, liquidity, currency, accounting standards and custodial risk.
- Due to the underlying real estate assets held in REITs, the liquidity of these securities is typically less than other equity securities.
- The market value of debt securities is affected by changes in prevailing interest rates. The Fund may also be exposed to credit and default risk by investing in such securities. The default risk increases for below investment grade debt securities.
- The value of an investment may fluctuate due to changes in exchange rates between currencies and may or may not be hedged back to the Fund's base currency.
- Fees and/or distributions may be paid out of the capital of the fund, which has the effect of lowering the capital value of investors' holdings in the fund and limiting the potential for future capital growth.

Please see the section entitled Special Investment Considerations and Risks of the Prospectus where full details are disclosed.
