Units in alternative investments may make up no more than 10% of the fund assets in aggregate total.

## What are the risks and what could I get in return?

### Risk indicator

The risk indicator assumes you will keep the product for at least 6 years.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level. Poor market conditions are unlikely to impact our capacity to pay you.

This product does not include any protection from future market performance so you could lose some or all of your investment.

**Please note potential currency risk. If you receive payments in a different currency, the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.**

You do not have to make any further payments to cover losses.

In addition, there are material risks that are not taken into account in the summary risk indicator: credit, liquidity, operational, transfer, and custody risk as well as risk from the use of derivatives.

Comprehensive information on the risks of the Fund can be found in the Information in accordance with § 21 AIFMG, section II, item 12.
