

Key Investor Information

This document provides you with key investor information about this Fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this Fund. You are advised to read it so you can make an informed decision about whether to invest.

Quantex Global Value Fund Class CHF I (ISIN LI0399611677)

Is a subfund of Quantex Funds.

This Fund is managed by LLB Fund Services AG. LLB Fund Services is a member of the LLB-Group.

Objectives and Investment Policy

The aim of fund management is to achieve high growth in value. To achieve this, the sub-fund invests mainly in shares of companies worldwide. Within this framework, the fund management is responsible for selecting the individual securities. The sub-fund may use derivatives transactions in order to reduce possible losses due to exchange rate fluctuations as well as to achieve higher increases in value. The Transaction costs for the purchase and sale of securities are borne by the sub-fund. They arise in addition to the costs listed under "Costs" below and may reduce the yield of the sub-fund. Investors may redeem their units on a daily basis in accordance with the prospectus. However, the management company may refuse redemption if exceptional circumstances make this seem necessary, taking into account the interests of investors.

This risk indicator is based on historical data; it is therefore not possible to predict future performance. The Fund's risk classification may change at a later date and may not be considered a guaranteed. Please note that even a Fund with a Category 1 classification does not constitute a completely risk-free investment.

A **risk level 6** fund has no capital guarantee, has a high potential level of gain or loss, and may experience the amplification of trends due to the impact of financial techniques such as leverage.

Due to the algorithm, not all possible risks can be considered when the Synthetic-Risk-and-Reward Indicator is calculated. You can find more detailed information regarding the risks in the constituent documents. The following risks don't have a direct impact on the indicator, but could still have an influence on the Fund:

- **Liquidity risks:** The Fund may invest a portion of its assets in securities that are not traded on an exchange or similar market. It may be difficult to find a buyer for these securities on short notice. This may increase the risk of a suspension of unit redemptions.

- **Counterparty risks:** The Fund may enter into various transactions with other contracting parties. If a contracting party becomes insolvent, it may no longer be able, or may be only partly able, to settle the Funds open payment claims.

- **Credit risks:** The Fund may invest a substantial portion of its assets in sovereign and corporate bonds. The issuers of these bonds may become insolvent, so that the bonds may lose their value, either in whole or in part.

- **Risks from the use of derivatives:** The Fund is permitted to enter into transactions involving derivatives. The greater opportunities that this affords are accompanied by greater risks. Using derivatives to hedge against losses may reduce the Fund's profit opportunities.

- **Custodial risks:** The custodial safe-keeping of assets, particularly abroad, may be associated with a risk of loss that can result from the Custodian, or sub-custodian, becoming insolvent, breaching its duties of care and diligence, or acting in an unlawful manner.

- **Operational risks:** The Fund may become a victim of fraud or criminal activity. It may suffer losses as a result of misunderstandings or errors on the part of employees of the Management Company or outside third parties or may be damaged due to external events, such as natural catastrophes.

- **Currency risk:** The unit class is denominated in Schweizer Franken, i.e. Eurozone investors are exposed to a currency risk. This generally results in a loss if investors hold a security denominated in a foreign currency and the underlying exchange rate drops. This risk likewise exists if the securities are traded on an exchange in euros.

A comprehensive presentation is available in the constituent documents.
