Objectives and investment policy

Robeco BP Global Premium Equities is an actively managed fund that invests in stocks globally. The selection of these stocks is based on fundamental analysis. The fund's objective is to achieve a better return than the index. The fund invests in a flexible manner across market capitalizations, regions and sectors, in developed countries across the world.

The fund promotes E&S (i.e. Environmental and Social) characteristics within the meaning of Article 8 of the European Sustainable Finance Disclosure Regulation, integrates sustainability risks in the investment process and applies Robeco's Good Governance policy. The fund applies sustainability indicators, including but not limited to, normative, activity-based and region based exclusions, proxy voting and engagement.

Currency risk is hedged to Euro.

Benchmark: MSCI World Index (Net Return, hedged into EUR)

Benchmark: MSCI World Index (Net Return, EUR). While the investment policy is not constrained by a benchmark, the fund may use a benchmark index in its marketing materials for comparison purposes. Some of the stocks selected will be

components of the Benchmark, but stocks outside the benchmark may be selected too. The portfolio manager may use their discretion to invest in companies or sectors not included in the benchmark based on opportunities discovered through fundamental research. The fund can deviate substantially from the issuer, country and sector weightings of the benchmark. There are no restrictions on the deviation from the benchmark. The benchmark is a broad market-weighted index that is not consistent with the ESG characteristics promoted by the fund.

This share class of the fund does not distribute dividend.

You can purchase or sell units in the fund on any valuation day. This fund may not be appropriate for investors who plan to withdraw their money within 5 years.

Risk and reward profile

Historical data, such as is used in calculating the synthetic indicator, is not a reliable indication of the future risk profile. The risk and reward category shown is not guaranteed to remain unchanged, the categorization may shift over time. The lowest category does not mean a risk-free investment.

Equities in general are more volatile than bonds. Equity funds with a global and or regional focus on developed markets are well diversified over countries and sectors making them less sensitive to price movements.

The following data are deemed material for this fund, and are not (adequately) reflected by the indicator:

- The product may use financial derivatives. A derivative counterparty may fail to fulfill its obligations which could result in a loss. Counterparty risk can be reduced via the exchange of collateral.
